

HARVARD SCHOOL OF PUBLIC HEALTH

Advancing

the Public's Health

through Learning

and Discovery

Official Register
of Harvard University
1998-99

Table of Contents

2	The Harvard School of Public Health	61	Department of Immunology and Infectious Diseases
4	Interdisciplinary Programs	66	Department of Maternal and Child Health
7	Master of Public Health Program	71	Department of Nutrition
11	Division of Biological Sciences	75	Department of Population and International Health
14	Department of Biostatistics	82	Summer Programs and Continuing Professional Education
21	Department of Cancer Cell Biology	85	Applying to the School: Admissions, Financial Aid, and Housing
25	Department of Environmental Health	91	Enrollment and Student Services
37	Department of Epidemiology	95	Alumni Association
45	Department of Health and Social Behavior	96	Faculty Index
50	Department of Health Policy and Management		

Academic Calendar, 1998-99

May 4-8	Preregistration for continuing students for fall 1998		application to other PhD programs offered through GSAS is December 30
July 1-August 14	Summer Session for Public Health Studies (see page 82)	December 19-January 3	Winter recess
July 1-August 14	Summer Program in Clinical Effectiveness (see page 82)	January 4	Deadline for application to HSPH doctoral (SD and DPH) and Master of Science (SM) programs; deadline for application to Master of Public Health (MPH) and Master of Occupational Health (MOH) programs in priority admission cycle
August 17-August 28	English for Professional Communication (see page 83)		
September 1-11	Advance Seminar Program (see page 83)		
September 1	Fall semester registration for ASP participants		
September 8	Fall semester registration for new students and students with a previous HSPH degree beginning a new program	January 14	Martin Luther King, Jr. Day, a holiday
September 9	Fall semester registration for returning students not cleared through preregistration process	January 22	<i>ab</i> and <i>b</i> period courses end
September 9-11	New student orientation	January 25-29	<i>e</i> period (optional special studies and field trips)
September 14	<i>a</i> and <i>ab</i> period courses begin	February 1	<i>c</i> and <i>cd</i> period courses begin
October 12	Columbus Day, a holiday	February 15	President's Day, a holiday
November 6	<i>a</i> period courses end	February 27	Final deadline for completing application to MPH and MOH
November 9	<i>b</i> period courses begin	March 26	<i>c</i> period courses end
November 11	Veterans Day, a holiday	March 29-April 2	<i>f</i> period (optional special studies and field trips)
November 26-30	Thanksgiving recess	April 5	<i>d</i> period courses begin
December 15	Deadline for application to PhD programs in the natural sciences, offered through the Graduate School of Arts and Sciences (GSAS); deadline for	May 3-7	Preregistration for continuing students for fall 1999
		May 31	Memorial Day, a holiday
		June 10	Commencement

FROM THE DEAN

The twentieth century has been an era of remarkable progress in health, yet many threats to public health remain. Some infectious diseases, seemingly vanquished early in the century, have reemerged; new diseases, most notably AIDS, have appeared; and the burden of chronic diseases has grown increasingly heavy. Other problems, such as violence and injury, not formerly considered public health problems, are now within the purview of public health professionals. The preservation and enhancement of the health of populations demand sophisticated, professional skills and the integration of many disciplines into a broad strategy that embraces the way we live, our environment, and our system of health care.

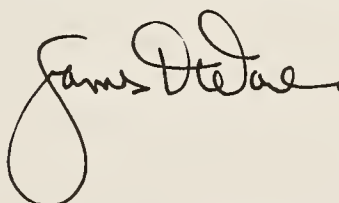

The range of courses, departments, centers, programs, and facilities described in this Official Register of the Harvard School of Public Health reflects the range and scope of the contemporary public health enterprise. The interests and expertise of faculty at the school are similarly diverse, extending across biological sciences, social sciences, numeric disciplines, and more. Scholars and professionals work together to overcome real-world public health challenges, including environmental hazards, new diseases, choices of lifestyle that rob individuals of many healthy years, inadequate access to health care, and the great parasitic diseases that kill and handicap millions around the globe. The school's multidisciplinary approach ensures that students gain both a broad perspective on public health and in-depth training in their field of interest.

This Register is an important source of information about educational opportunities at the Harvard School of Public Health. Though we have endeavored to make it accurate and comprehensive, it is necessarily an incomplete description of the learning experience available at the school. HSPH is a place to acquire new skills; a place to enrich one's professional perspective by interacting with fellow students, with HSPH faculty, and with scholars from

cooperating schools and institutions; a place to gain a more sophisticated understanding of health sciences, health issues, and solutions to health problems; and a place to test one's ideals, objectives, and imagination against the imposing array of biological, behavioral, social, economic, and political barriers to improved public health. For those seeking more details on programs or departments, we have incorporated contact information for appropriate resource people throughout the Register and invite prospective students to call or write at any time.

By its nature, public health is an ever-evolving field. This year promises to be particularly engaging for the school as our new dean, Barry R. Bloom, arrives to assume his position this autumn. Dean Bloom is an internationally distinguished scientist with a broad and inclusive vision of public health. His vision, combined with his involvement in the national and international public health communities, will strengthen the school in all its endeavors.

The overriding mission of HSPH, to advance the public's health through learning and discovery, comprises four objectives: to educate scientists, professionals, and leaders for public health; to foster new discoveries and develop better technologies for improved health of individuals and populations; to inform and influence debate on key public health issues; and to strengthen capacities and services that meet health needs in the community. We believe we are engaged in a vital enterprise of central importance to society. We welcome those who join us at the school to share in that sense of excitement and challenge.

James H. Ware
Acting Dean

THE HARVARD SCHOOL OF PUBLIC HEALTH

The history of professional education in public health at Harvard University began in 1909 with the establishment of the Department of Preventive Medicine and Hygiene in the Medical School, the first such department in the United States. In 1919, the Harvard-MIT School of Health Officers was formed under the joint management of Harvard University and the Massachusetts Institute of Technology (MIT). The School of Health Officers operated until 1922, when an endowment from the Rockefeller Foundation made possible the founding of the Harvard School of Public Health (HSPH).

Faculty and graduates of HSPH have been at the forefront of efforts to stem disease and promote health worldwide: from Alice Hamilton's pioneering studies of lead and mercury poisoning to Thomas Weller's pathbreaking research on the polio virus, from Philip Drinker's invention of the iron lung to the unprecedented 27-year stewardship of the US Centers for Disease Control and Prevention (1962-1989) by five successive HSPH alumni. Two Nobel Prizes, a Lasker Prize, two

MacArthur Awards, presidential citations, and countless other honors attest to the excellence and impact of this work. More difficult to quantify—but a far better gauge—are the perceptible gains in length and quality of life that have been realized through their efforts.

Today, HSPH includes over 300 faculty members from the diverse fields and disciplines that constitute public health. The student body comprises nearly 800 persons from throughout the United States and fifty other countries. Students, like faculty, come from an array of fields, and include health services administrators, epidemiologists, nurses, dentists, lawyers, statisticians, environmental scientists, engineers, research assistants, psychologists, and social workers. Approximately 30 percent are physicians. Students in some programs may enroll immediately after earning an undergraduate degree.

With the notable exception of the MPH program, most of the school's teaching and research activities are carried out in ten academic departments, which are described in some detail in this *Register*.

Degrees Offered by HSPH

HSPH offers programs leading to the graduate degrees of Master of Public Health (MPH), Master of Science (SM) in a public health discipline, Master of Occupational Health (MOH), Doctor of Public Health (DPH), and Doctor of Science (SD) in a public health discipline. The school also participates in Doctor of Philosophy (PhD) programs offered through the university-wide Program in Health Policy (see page 53) and the Biological Sciences in Public Health Program (see page 11). Diplomas for the MPH, DPH, and MOH degrees show the degree only. Diplomas for the SM and SD degrees also show the name of the department; in the Department of Environmental Health a concentration is designated as well.

Master of Public Health The MPH program is geared toward professionals who hold a doctoral degree in medicine, dentistry, veterinary medicine, law, or other fields related to public health, or a master's degree in nursing. The MPH is normally a nine-month (two-semester, 40-credit) program. Students concentrate in one of seven areas: international health, health care management, family and community health, law and public health, occupational and environmental health, quantitative methods, or clinical effectiveness. Please see page 7 for further information about the program.

Resources

The school's main buildings for research, teaching, and administration are located in the heart of Boston's hospital district and Harvard University's Longwood campus. The facilities adjoin those of Harvard's Medical School, School of Dental Medicine, and Francis A. Countway Library of Medicine, and are near Children's Hospital Medical Center, Beth Israel Deaconess Hospital, Brigham and Women's Hospital, and other Harvard-affiliated hospitals. The school is within walking distance of many cultural institutions, such as Boston's Museum of Fine Arts, and public transportation is readily available to other parts of Boston and Cambridge, where students may cross-register for courses at other Harvard schools and at MIT.

The library needs of the school are served principally by the Francis A. Countway Library of Medicine, which combines the resources of the Harvard Medical Library and the Boston Medical Library. With recorded holdings of more than 600,000 volumes and 4,200 current periodicals, it is one of the largest medical or health-related libraries in the country. The Countway also owns an extensive collection of historical materials dating from the fifteenth century. Students have borrowing privileges throughout the Harvard University library system. The Boston Public Library, MIT libraries, and other Boston-area libraries add to the total book and periodical resources available to students.

HSPH operates an Instructional Computing Facility dedicated to serving the course work and research computing needs of its students and faculty. Resources include SUN Unix computers, X-terminals, IBM personal computers, Apple Macintosh computers, a Novell network, dot matrix and laser printers; a wide array of software, including statistical packages, programming languages, analytical programs, and word-processing packages; services such as remote dial-in, file transfer, electronic mail, connections to the Internet and World Wide Web, user assistance, short courses, and computer accounts for funded research. Many academic departments also provide computing resources for their students. Additional services, such as computer classes, discounted hardware and software, user groups, and technical support, are available through the offices of Harvard's University Information Systems.

For all HSPH programs, the Committee on Admissions and Degrees considers applicants' academic ability, the relevance of their previous education and experience, and their overall qualifications for graduate education in public health, including those qualities of character that reflect upon an individual's suitability to be a public health professional. Applicants must also satisfy the requirements of the department or program to which they are applying. Applicants to doctoral programs must demonstrate the ability to undertake original research.

The master's degrees are considered terminal degrees for individuals who seek professional positions in public health, though a few departments view the SM as preparation for doctoral study. The doctoral programs are designed for students with interests in the scientific basis of public health and preventive medicine who wish to pursue academic or research careers. Because specific prerequisites and degree requirements vary with the field of specialization, prospective applicants should consult the sections of this *Register* that describe degree programs in greater detail and consult with the individuals designated as contact persons for the various departments and programs. In general, requirements for the HSPH degree programs are as follows.

Master of Science SM programs differ considerably from department to department. In general, eighteen-month (four-semester, 80-credit) SM programs are intended for applicants holding a bachelor's degree in a relevant field; some departments require or prefer applicants to have relevant work experience. A few departments also offer nine-month (two-semester, 40-credit) SM programs for applicants with a prior master's or doctoral degree or substantial work experience. Candidates for any SM degree must fulfill the school-wide requirements in biostatistics (BIO 200, BIO 201ab, or BIO 219ab) and epidemiology (EPI 200 or EPI 201a), as well as any requirements of the department in which they are enrolled. Students in professional SM programs must fulfill core requirements in biostatistics, epidemiology, environmental health sciences, health services administration, and social and behavioral sciences.

Master of Occupational Health The MOH program is designed to train physicians in the public health disciplines relevant to preventing occupational disease and injury. This nine-month (two-semester, 40-credit) degree program is usually taken as part of a two-year residency in occupational medicine. Please see page 30 for information about the program.

continued on page 6

Interdisciplinary Programs

Institutes and Centers

The school has established several institutes and centers to advance research in areas of importance to health. These efforts tend to be multidisciplinary in their approach, bringing together faculty from several HSPH departments and, in some instances, from several Harvard schools. Faculty affiliated with the programs offer courses in their field of interest through the school's academic departments and often provide opportunities for student involvement in research.

Center for Biostatistics in AIDS Research

Executive Director: Kenneth Stanley, MA, PhD, Lecturer on Biostatistics
Scientific Director: Stephen Lagakos, MPhil, PhD, Professor of Biostatistics
For more information, contact Kenneth Stanley
Phone: 617-432-2822
Fax: 617-432-2843
E-mail: kstanley@sdac.harvard.edu

Center for Health Communication

Director: Jay A. Winsten, PhD, Associate Dean for Public and Community Affairs
For more information, contact Terri Mendoza
Phone: 617-432-1038
Fax: 617-731-8184
E-mail: tmendoza@sph.harvard.edu

Center for Prevention of Cardiovascular Disease

Acting Director: (Arthur) Mu En Lee, BM, PhD
For more information, contact Vibeke Burley
Phone: 617-432-1010
Fax: 617-432-2980
E-mail: burley@cvtlab.harvard.edu

Center for Quality of Care Research and Education (QCARE)

Director: R. Heather Palmer, MB, BCh, SM, Lecturer on Health Services
For more information, contact Mary McCann
Phone: 617-432-2027
Fax: 617-432-3199
E-mail: qcare@hsph.harvard.edu

Educational Resource Center for Occupational Safety and Health

Director: David C. Christiani, MD, SM, MPH, Professor of Occupational Medicine and Epidemiology
For more information, contact David C. Christiani
Phone: 617-432-1260
Fax: 617-432-0219
E-mail: dchris@hohp.harvard.edu

François-Xavier Bagnoud Center for Health and Human Rights

Acting Director: Daniel Tarantola, MD
For more information, contact Jacoba von Gimborn
Tel: 617-432-0656
Fax: 617-432-4310
E-mail: fxbcenter@igc.apc.org

Harvard AIDS Institute

Chair: Myron E. (Max) Essex, DVM, SM, PhD, John Laporte Given Professor of Immunology and Infectious Diseases
For more information, contact
Tel: 617-432-4400
Fax: 617-432-4545
E-mail: hai@hsph.harvard.edu

Harvard Center for Cancer Prevention

Director: David J. Hunter, MB, BS, MPH, SD, Associate Professor of Epidemiology
For more information, contact
Tel: 617-432-0038
Fax: 617-566-7805
E-mail: hccp@hsph.harvard.edu

Harvard Center for Children's Health

Director: Marie C. McCormick, MD, ScD, Sumner and Esther Feldberg Professor of Maternal and Child Health
For more information, contact Deborah Denhart
Tel: 617-432-3222
Fax: 617-432-3755
E-mail: children@hsph.harvard.edu

Harvard Center for Population and Development Studies

Acting Director: Sudhir Anand, DPhil, Adjunct Professor in the Department of Population and International Health
For more information, contact Winifred M. Fitzgerald
Phone: 617-495-3002
Fax: 617-495-5418
E-mail: wmfitz@hsphsun2.harvard.edu

Harvard Center for Risk Analysis

Director: John D. Graham, AM, PhD, Professor of Policy and Decision Sciences
For more information, contact Lynne Mastone
Phone: 617-432-4497
E-mail: lmastone@sph.harvard.edu

Harvard Center for Society and Health

Director: Lisa Berkman, MS, PhD, Florence Sprague Norman and Laura Smart Norman Professor of Health and Social Behavior and of Epidemiology
For more information, contact Laura Kubzanski
Tel: 617-432-3589
Fax: 617-432-3755
E-mail: lkubzans@hsph.harvard.edu

Harvard Injury Control Research Center

Director: David Hemenway, AM, PhD, Professor of Health Policy
For more information, contact Maria Segui-Gomez
Tel: 617-432-1143
Fax: 617-432-0190
E-mail: msegui@hsph.harvard.edu

John B. Little Center for Radiation Sciences and Environmental Health

Director: John B. Little, MD, James Stevens Simmons Professor of Radiobiology
For more information, contact Ursula Riedel
Tel: 617-432-0054
E-mail: uriedel@sph.harvard.edu

Kresge Center for Environmental Health

Director: Joseph D. Brain, SM, SM, SD, Cecil K. and Philip Drinker Professor of Environmental Physiology
For more information, contact Arlene Kirsch
Phone: 617-432-3483
E-mail: akirsch@sph.harvard.edu

Division of Public Health Practice

The Division of Public Health Practice represents a broad-based effort to provide bridges between the school's intellectual, professional, and educational resources and the underserved communities of Boston and the United States. Working in collaboration with schools, government, and social organizations, the division implements the tools and strategies of public health to meet the health needs of these communities.

The mission of the division is threefold: service, education, and research. At the school, the division links the various academic departments to promote collaborations that will improve public health practice training and service opportunities. The division is committed to insuring that students graduate with competencies in the core functions of public health and the vision to become leaders in their fields.

Also, guided by community needs and requests, division faculty and students work with community members to design research projects that are creative responses to local public health challenges. There are opportunities for students to develop independent projects or participate in the ongoing community projects of the division.

Included under the umbrella of the division are the Office of Government and Community Programs, the Program for Negotiation and Conflict Resolution, and the Violence Prevention Program.

Interdisciplinary Program in Infectious Disease

Education and research on aspects of infectious disease occurs in a number of HSPH departments including the Departments of Environmental Health, Epidemiology, Immunology and Infectious Diseases, Nutrition, and Population and International Health. These departments participate in the Interdisciplinary Program in Infectious Disease, which focuses on population studies incorporating both epidemiologic and laboratory methods. This doctoral program is intended for those students who desire careers in research and teaching in infectious disease.

Prospective students must apply to one of the participating departments, and the degree will be issued from that department. Students are responsible for fulfilling the doctoral requirements of the home department in addition to the program's core requirements in biology, quantitative methods, and substantive infectious disease courses.

Alternatively, the Departments of Epidemiology, Immunology and Infectious Diseases, and Population and International Health offer discipline-oriented doctoral or master's degree programs. Please refer

to the appropriate sections of this *Register* for descriptions of these discipline-centered degree programs.

Women, Gender, and Health

Several departments offer courses designed to increase understanding of the health of girls and women throughout the life cycle, with gender and biology understood as determinants of health, disease, and well-being. Faculty members of the interdepartmental working group on women, gender, and health offer an interdepartmental course, and the group maintains a list of HSPH and non-HSPH courses that are relevant to women's health.

WGH 200b. Women, Gender, and Health (Krieger, Gruskin)

Focuses on constructions of gender and sex and their implications for understanding determinants of population health and creating healthy public policy. Demonstrates ways of conceptualizing gender in relation to biology and health using case examples pertaining to breast cancer, smoking, cumulative trauma disorders of the hands and wrists, HIV/AIDS, violence, access to health services, sexual health, reproductive health, and population policy. (2.5 credits)

Minority Postdoctoral Fellowship Program

This program was created to assist in the transition between academic training in public health disciplines and entry-level faculty positions for members of underrepresented minority groups. Each fellow works closely with a faculty mentor who helps to foster the fellow's professional development in teaching and research. Fellows normally complete the program in two years, having established an independent research agenda, published papers in peer-reviewed journals, obtained independent grant support, and gained sufficient teaching experience to develop their own courses. Fellows also participate in other activities designed to involve them fully in the formal and informal life of the academic community.

Candidates for this program are American citizens or permanent residents belonging to one of the minority groups (African American, Hispanic/Latino, and Native American) considered to be underrepresented in the faculty ranks. All applicants must hold an earned doctoral degree in a field appropriate to their area of interest at HSPH. The fellowship carries a competitive stipend.

For more information on the Division of Public Health Practice, please contact Kenya Elisha-McClaren, Division of Public Health Practice, 677 Huntington Avenue, Boston, MA 02115. Phone: 617-432-3055 Fax: 617-432-0068

For more information about the Interdisciplinary Program in Infectious Disease, contact Jonathan Freeman, MD, SD, Department of Epidemiology, 677 Huntington Avenue, Boston, MA 02115. Phone: 617-432-4558 Fax: 617-566-7805 E-mail: jfreeman@hsph.harvard.edu

For more information about courses related to women, gender, and health, contact Marlene Goldman, SD, Department of Epidemiology, 677 Huntington Avenue, Boston, MA 02115. Phone: 617-432-4586 Fax: 617-566-7805 E-mail: goldman@epinet.harvard.edu

For more information on the Minority Postdoctoral Fellowship Program, contact Deborah Prothrow-Stith, MD, Associate Dean for Faculty Development, 677 Huntington Avenue, Boston, MA 02115. Phone: 617-432-0814 Fax: 617-432-0068

Throughout the year, HSPH invites students from Boston-area schools to visit and learn about public health. Here, middle-school students work on a violence-prevention poster with their HSPH mentor.

Doctor of Science Applicants to the SD program must hold a bachelor's degree. In some instances an applicant is expected to complete an SM program at the school before applying for admission to doctoral study. Candidates for the SD degree must fulfill the following basic requirements: completion of course work in one major field (20 credits) and two minor fields (10 credits each) and courses in introductory epidemiology (EPI 200 or EPI 201a) and intermediate biostatistics (ordinarily BIO 210cd and BIO 211cd); completion of the school-wide oral qualifying examination, usually by the end of the second year; completion of a program of independent and original research in one of the basic disciplines of public health; the presentation and submission of this research in a thesis and the public defense of the thesis; and payment of at least two years of full-time tuition and one year of full-time reduced tuition. The *Student Handbook*, distributed during fall registration, pro-

vides detailed information about school-wide requirements and procedures. Departments may stipulate course and examination requirements beyond the school-wide requirements, and prospective applicants are encouraged to contact the department or program to which admission is sought for detailed information.

Doctor of Public Health Most applicants for admission to the DPH program hold a doctoral degree in medicine, dental medicine, or veterinary medicine; consideration is also given to applicants who hold an advanced degree in one of the disciplines basic to public health. The applicant must hold, or be in progress toward, an MPH degree, or its equivalent, from an approved institution. Once admitted to the school, DPH candidates are subject to the same academic requirements as candidates for the SD degree, described previously.

MASTER OF PUBLIC HEALTH PROGRAM

MPH students come from all parts of the world, bringing to the program a wide variety of backgrounds and experiences. The majority are midcareer professionals preparing for advancement in their organizations or for transition into new fields. Most hold a professional degree in medicine, nursing, veterinary medicine, or law. Some hold a doctoral degree in a field related to public health, such as biology, behavioral sciences, or other natural and social sciences. On occasion, an individual is admitted to the program who holds a master's degree in a field closely related to public health and who has at least three years of relevant work experience.

Students enrolled in MD, DMD, or DDS programs and who have a career interest in public health and preventive medicine are eligible to apply for admission to the MPH program. Generally, these students undertake the MPH program while on leave of absence between the third and fourth year of medical or dental school. They receive the MPH degree upon successful completion of both programs and conferral of the doctoral degree. Students at Harvard Medical School may wish to inquire about the possibility of undertaking an integrated MD-MPH program.

MPH candidates may complete the requirements for the degree on a full-time or part-time basis (or may change from one status to the other). Full-time students normally complete the program in two semesters (September through May). Part-time students complete the requirements for the degree over a period of two or three years. Courses taken for credit in the Summer Session for Public Health Studies (see page 82) or the Program in Clinical Effectiveness (see page 82) may be counted toward the degree.

MPH students are required to complete a minimum of 40 course credits and must fulfill core requirements in the fundamental public health disciplines. These requirements include an interdisciplinary course on the ethical basis of the practice of public health (ID 250 or

The Master of Public Health (MPH) degree is the most widely recognized professional credential for leadership

in public health. The program is organized around seven career-oriented concentrations, each comprising a common core curriculum and specialty electives. The program emphasizes active, student-directed learning, problem-solving, and the acquisition of skills essential to the practice of public health.

251s); the practice course for the chosen concentration (see course listings on page 10); one course in biostatistics (BIO 200 or 201ab); one course in epidemiology (EPI 200 or 201a); one course in environmental health (usually EH 201b or 202d); one course in health and social behavior; and 2.5 to 5 credits in management courses relevant to the chosen concentration.

Applicants to the MPH program select one of seven areas of concentration in which they complete a second tier of recommended courses. Each of these concentrations offers a selection of optional tracks, or interest areas, allowing students to pursue in depth one or more areas of particular relevance to their career goals. The tracks enable students in the

interdisciplinary MPH program to establish a second "home" in one of the school's academic departments, such as Health Policy and Management or Maternal and Child Health. Beyond the program and concentration requirements, students are encouraged to consult with faculty advisors to choose elective courses best suited to their needs. Concentration goals, tracks, and general requirements are described below.

International Health This concentration is intended to prepare health professionals for leadership roles in the practice of international health, with a special emphasis on the health problems of populations in developing countries. The concentration enables students to work toward health improvement by taking account of demographic and epidemiologic changes, the organization of health care and evolving patterns of health care demand, new scientific knowledge and technology, and the roles of professionals in policy, law, communications, and advocacy. It also assists them in finding new ways to strengthen national and institutional capacities for health policy making and management. Graduates of the program have assumed leadership positions in national ministries of health, international organizations, donor aid agencies, private voluntary organizations, research and academic institutions, and the private sector.

The International Health concentration has no defined tracks. Students are encouraged to choose elective courses best suited to their professional development.

Health Care Management This concentration prepares professionals for leadership positions in health care organizations that provide direct care (such as hospitals, group practices, and home health agencies), those that pay for and/or organize health care (such as governments, health insurers, and health maintenance organizations), and those that supply direct-care providers (such as pharmaceutical companies and biotechnology firms). Course work covers the growing role of managed care in the health care enterprise. Program graduates fill many roles, from consultants and staff analysts, to middle management and executive positions.

RICARDO CUSTODIO

Master of Public Health student

Ricardo Custodio grew up in a poor family in Hawaii, with annual pilgrimages to even greater poverty among

relatives in the Philippines. "My early experiences of being poor solidified for me the idea that every person deserves respect," he says.

In his work as a pediatric resident, Custodio has served Hawaii's impoverished and homeless children, who suffer from a lack of access to health care.

Once he completes his studies at HSPH, Custodio says, "I will return to Hawaii. In my new role as a civil servant executive with the Department of Health, I plan to bring the disenfranchised in to help set the agenda for policy changes. This is the only way to empower the poor."

Beyond the MPH core requirements, students choose between either a management or a policy (economics and political science) disciplinary approach to public health and select from clusters of recommended courses to gain depth in their chosen area.

Family and Community Health This concentration focuses on the promotion of health and the prevention of disease in populations by preparing health professionals with leadership skills in public health. Courses emphasize strategies for establishing health objectives, data collection and analysis, the management of fiscal and manpower resources, consultation, communication, advocacy, and policy formation in the public sector. The program prepares students for positions in diverse public health and nonprofit settings, including federal, state, and local government, voluntary health organizations, and community-based primary care settings. Positions filled by program graduates include public health administrator, health planner, health policy analyst, and health educator; others have gone on to undertake doctoral study.

Beyond the MPH core requirements, students are encouraged to develop expertise in a substantive area geared to their professional inter-

ests. Areas of interest include maternal and child health, community health, financial analysis, mental health and substance abuse, women and health, and health promotion and disease prevention.

Law and Public Health This concentration is designed to train leaders in the field of public health law. The course of study introduces lawyers to the science of public health, provides them with skills in analysis of public health problems, and allows them to design a curriculum that will meet their particular interests. The concentration prepares graduates for positions in a variety of settings, including work in a health law or environmental section of a law firm, positions in local, state, and federal government, or posts in academia.

Beyond the MPH core requirements, lawyers are encouraged to develop a specialization in a substantive area by choosing among clusters of recommended courses in such fields as health care delivery or environmental health.

Occupational and Environmental Health

This concentration is designed for physicians and other professionals who intend to practice occupational medicine or to hold responsible positions in occupational and/or environmental policy and management. The curriculum focuses on assessing workplace hazards, the physiologic and biomechanical aspects of work, and a practical problem-solving approach to health problems in various work settings.

The concentration features three areas of special interest: occupational medicine, occupational health, and environmental health. The occupational medicine track is designed for physicians who intend to satisfy the requirements of the American Board of Preventive Medicine for certification in occupational and environmental medicine. The requirements for the Master of Occupational Health (MOH) degree are similar to those of the MPH in occupational medicine; physicians may elect either degree. Please see page 30 for information about the MOH program.

This concentration also fulfills the first-year requirements of the two-year residency program in occupational and environmental

medicine (see page 31 for more information on this program).

Quantitative Methods This concentration prepares students for public health careers in which quantitative methods are central. It is designed for midcareer health professionals and those in the early stages of their careers. The concentration emphasizes study design and data analysis, and the application of quantitative methods to decision making and to research in public health. Program graduates commonly supervise population-based health research in government, health care institutions, and private industry. Many graduates practice in academic medicine.

Beyond the MPH core requirements, concentrators must take an additional 2.5 credits of introductory epidemiology and 7.5 credits in intermediate/advanced biostatistics, epidemiology, or decision sciences and an approved *d* period practice course. Concentrators may choose from among advanced quantitative courses at HSPH or elsewhere in the university, including biostatistics, epidemiology, decision sciences, demography, needs assessment, and evaluation.

Clinical Effectiveness This concentration prepares physicians for clinical research responsibilities and for leadership roles in evaluating and improving all aspects of health care delivery. It is concerned with identifying the most appropriate, ethical, and cost-effective means of providing health care through prevention, early detection, or treatment, and is designed to provide the analytic and quantitative training necessary to evaluate clinical practices. Along with the broad perspective the program offers on general aspects of public health, this training provides a basis for identifying the health policy implications and public health benefits of the results of clinical investigations. Major areas of professional interest for concentrators include clinical epidemiology and biostatistics, cost-effectiveness analysis, medical decision analysis, health services research, quality improvement in health care, and measurement of health-related quality of life. The concentration is limited to clinicians enrolled initially in the Summer Program in Clinical Effectiveness (see page 82).

Acting Program Director: Richard R. Monson, MD, SD, Professor of Epidemiology

For more information about the MPH program, please contact Roberta Gianfortoni, Director for Professional Training, Office for Professional Education, 677 Huntington Avenue, Boston, MA 02115.

Phone: 617-432-0090

Fax: 617-432-3365

E-mail: rgianfor@hsph.harvard.edu

The MPH program serves as a required academic year for residency training in preventive medicine, aerospace medicine, or occupational and environmental medicine. Please see page 31 for information about the occupational and environmental medicine residency.

Practice Courses for Master of Public Health Students, 1998-99

Please note that this list may be incomplete and is subject to change. Detailed course listings, including information about prerequisites, course activities, and scheduling, are distributed to students with registration information. Descriptions of other core courses and electives for the MPH program are included in the course listings of the respective departments. A description of core requirements for each concentration is available from the MPH office.

Letters following course numbers indicate the period(s) in which a course is given: a and b (fall quarters); c and d (spring quarters); e and f (one-week sessions in January and March); s and t (1999 summer sessions).

ID 250. Ethical Basis of the Practice of Public Health

ID 250a. (Roberts, Reich)

ID 250b. (Roberts)

Provides a broad overview of the main philosophical and moral ideas that are used to resolve debates of public health policy. Helps students develop the capacity to analyze, criticize, evaluate, and construct policy-oriented arguments. (2.5 credits)

ID 251s. Ethical Basis of the Practice of Public Health: Health Care Delivery (Brennan)

Emphasizes US health care policy and modern medical ethics to explore the political theory of medical care. Helps health professionals understand the manner in which political economy and ethics interact in health care policy decisions. (2.5 credits)

ID 261cd. Practice of Health Care Management (Kasten, McDonough)

Offered through two sections: one focuses on the managerial skills required of public health professionals, including leadership negotiations, interdisciplinary teams, and communication. The other section explores the policy-making process from a political perspective. Fieldwork for both sections provides practical experience in health care management or health policy development. (5 credits)

ID 262a. Introduction to the Practice of International Health (Cash)

Defines the scope of international health, highlights contemporary issues, and reviews case studies of policies and practices. Topics include world health and development, health transitions, disease control, primary health care, child survival, essential drugs, health policy, and evolving roles of international and nongovernmental organizations. (2.5 credits)

ID 263cd. Practice of Occupational Health (Smith, Herrick)

Explores the relationship between working conditions and health by focusing on the assessment of workplace hazards, the physiology and biomechanical aspects of work, and a practical approach to health problems in various work settings. (5 credits)

ID 264bcd. Practice of Family and Community Health (Aitken, Kurland)

Enables students through fieldwork to apply managerial and analytic techniques to problems confronting public or community health agencies. (5 credits)

ID 265c. Practice of Quantitative Methods (Monson, Testa)

Explores practical and conceptual issues in the design, conduct, analysis, and evaluation of human studies through the discussion of current research and methodologies. Students design studies to address important health problems. (2.5 credits)

ID 330f. Field Trip

Gives students a first-hand view of the activities of the Centers for Disease Control and Prevention (CDC) in Atlanta and an opportunity to meet individually with professional staff. Lectures and tutorials relate to such disciplines as occupational diseases, surveillance systems, epidemiology, control measures for chronic and infectious diseases, and CDC's role in international health. (1 credit)

DIVISION OF BIOLOGICAL SCIENCES

Doctor of Philosophy in Biological Sciences in Public Health (BPH)

Students wishing to study cellular and molecular biology or physiology as it pertains to major problems in public health should apply to the PhD program in Biological Sciences in Public Health. This program offers the PhD degree through Harvard University's Graduate School of Arts and Sciences, Division of Medical Sciences, Committee on Biological Sciences in Public Health.

Participating HSPH departments offer PhD programs in the following areas:

- Cancer Cell Biology
- Environmental Health (Physiology)
- Nutrition (Biochemistry)
- Immunology and Infectious Diseases (Immunology and Molecular Biology of Parasitic and Other Infections)

These programs are described in the departmental sections of this *Register*. In general, the BPH program offers a firm foundation in the basic biomedical sciences, as well as in epidemiology and biostatistics. Specific courses supplement this core, as dictated by individual research concentrations. Students in this program engage in laboratory rotations in three different research areas to enable them to assess realistically their interests in a thesis project and to evaluate the suitability of the laboratory and the mentor. At the completion of these rotations, students select an area of concentration and a thesis research laboratory and complete the required curriculum. A qualifying examination must be passed before engaging in thesis work, and the thesis must be defended before the granting of the PhD. Some students also participate in the Master of Biomedical Science program, which is designed to offer PhD students a greater knowledge of human biology and disease.

Applicants generally have a bachelor's degree and demonstrated competence in organic and biological chemistry, general biology, physics, and calculus. Those deficient in one of these ar-

The Division of Biological Sciences (DBS) is an umbrella organization encompassing the HSPH Departments of Cancer Cell Biology, Immunology and Infectious Diseases, Nutrition, and Environmental Health.

In most of these departments, two doctoral degrees are offered: the Doctor of Philosophy (PhD) and the Doctor of Science (SD). In general, the PhD programs center on laboratory-based investigation in the biological sciences, while the SD programs emphasize epidemiological analysis.

eas may be admitted provisionally on the condition that appropriate courses will be taken before and/or after entering the program. Applicants must take both the GRE general and subject tests by October in order to meet the application deadline of December 15.

All students admitted to the program receive a stipend and tuition support. Students are encouraged to apply for fellowships from outside sources since certain external fellowships provide higher stipends. While funds to support international students are limited, one special scholarship is available each year for a student from a developing, subSaharan African country. There is also a university-wide

For application materials and information about admission to the PhD program, please contact the Admissions Office, Division of Medical Sciences, Harvard Medical School, 260 Longwood Avenue, Boston, MA 02115.

Phone: 617-432-0162

The deadline for application to the PhD program is December 15.

Applicants who have specific questions about the PhD program may contact Ruth Kenworthy, Administrator, Division of Biological Sciences, 655 Huntington Avenue, Boston, MA 02115.

Phone: 617-432-4470

Fax: 617-430-0433

E-mail:

kenworthy@cvtlab.harvard.edu

For application materials and information about admission to the SD program, please contact the Assistant Director of Admissions, Harvard School of Public Health, 677 Huntington Avenue, Boston, MA 02115.

Phone: 617-432-1031

Fax: 617-432-2009

E-mail: admisofc@sph.harvard.edu

The deadline for application to the SD program is January 4.

Faculty

Program Director, Committee on Biological Sciences in Public Health: Dyann F. Wirth, PhD (Massachusetts Institute of Technology); Professor of Tropical Public Health. Mechanisms of drug resistance in malaria, including molecular genetic analysis and field-based studies; genetic analysis of malaria transmission; analysis of gene expression; transsplicing and homologous recombination in *Leishmania enriettii* using molecular genetic techniques.

(Arthur) Mu En Lee, BM (Kaohsiung Medical College), PhD (University of California, San Francisco); Associate Professor of Molecular Biology. Transcriptional regulation of genes expressed in the blood vessel wall in normal and diseased states.

fellowship program that provides funding to qualified underrepresented minority students in the sciences.

Graduates ordinarily assume positions as faculty members and research scientists at medical schools, research institutes, and schools of public health. Career opportunities in the biological sciences as they apply to public health are expected to grow both in academia and in the biotechnology and pharmaceutical industries.

Courses Offered by the Division of Biological Sciences, 1998-99

Please note that this list may be incomplete and is subject to change. Detailed course listings, including information about prerequisites, course activities, and scheduling, are distributed to students with registration information.

Letters following course numbers indicate the period(s) in which a course is given: a and b (fall quarters); c and d (spring quarters); e and f (one-week sessions in January and March); s and t (1999 summer sessions).

DBS 201b. Interface of Biology and Public Health: Core Knowledge for the 21st Century (Wirth)

This course is for all students who plan professional careers in public health. Examines the underlying biological mechanisms relevant to major public health problems. Emphasizes fundamental aspects of modern biological sciences. Emphasis is placed on concepts important for public health professionals and decision makers. (2.5 credits)

DBS 205ab. Biological Sciences Seminars (Kelsey, Paulauskis)

Presents current research by faculty members in carcinogenesis, DNA damage and repair, immunology, molecular biology, radiobiology, respiratory biology, and virology. (5 credits)

DBB 207cd. Statistical Methods in Biology (Adak)

Familiarizes students with the statistical methods used in laboratory research for design of experiments and statistical analyses of hypotheses. Topics include theory of probability and statistics, analysis of data, ANOVA and multiple regression, and non-parametric methods. (5 credits)

DBE 208cd. Pathophysiology of Human Disease (Kobzik)

Surveys disease problems in the cardiovascular, respiratory, hematopoietic, reproductive, and gastrointestinal systems. Emphasizes the pathophysiology of disease manifestations, the pathogenesis of the disease process, and public health perspectives. (5 credits)

THUMBI NDUNG'U

Doctoral student, Division of Biological Sciences

The current efforts of Thumbi Ndung'u to develop a vaccine against HIV subtype C stem from a time when he saw the

devastation that infectious diseases can cause. "In 1981, when I graduated from veterinary school in Nairobi, I worked on schistosomiasis, a parasitic disease common in tropical countries. It has terrible effects among school-aged children," Ndung'u says. "They can lose the best years of their lives because of this parasite."

The HIV subtype Ndung'u studies has not been a high priority for those working toward HIV vaccines. "But the scientific community is beginning to pay attention to what's going on in developing countries," says Ndung'u, noting that HIV-C is most common in subSaharan Africa, India, and parts of Southeast Asia.

After graduating, Ndung'u wants to continue his vaccine work in developing countries.

"The challenge is greater there," he says.

"The problems faced in developing countries are enormous, but they can be overcome."

DBN 209d. Membrane Trafficking (Wessling-Resnick)

Presents a molecular overview of the elements involved in membrane traffic, describes how pathways are interconnected, and explains how regulatory mechanisms maintain cellular integrity through membrane traffic. (2.5 credits) Not offered 1998-99.

DBS 211c. Thrombosis, Heart Attacks and Strokes: Molecular, Genetic, and Epidemiologic Insights (Reed)

Examines key epidemiologic, genetic, and molecular studies that link thrombosis and cardiovascular disease. Topics include the epidemiology of heart attacks and stroke, the molecular regulation of thrombosis, and the growing understanding of differential genetic risk for these events. Examples include the process of defining risk factors, discovering molecular mechanisms for causation, and translating those insights into better measures for the treatment or prevention of thrombotic disease. (2.5 credits)

DBS 225cd. Applied Molecular Biology (Shoe-maker)

Covers the theoretical and practical aspects underlying molecular biology technologies. Focuses on ways that different procedures can work together to solve research problems, and pitfalls to avoid. (2.5 credits) Not offered 1998-99.

DBS Elective Courses

The Division of Biological Sciences offers interdisciplinary training, with students taking courses in several different departments to meet their individual requirements. All students complete core course requirements and elective courses during their first two years of study. In addition to core courses in biochemistry, cell biology, genetics, microbiology, and physiology (offered through the Division of Medical Sciences), students take one or more of the following elective courses, which are described in the departmental listings of this Official Register.

NUT 202cd	The Science of Human Nutrition
CCB 204ab	Principles of Toxicology
IMI 203ab	Survey of Immunobiology
EH 205ab	Human Physiology
CCB 207ab	Introduction to Cancer Biology: Radiation Biology
IMI 208cd	Immunology of Infectious Diseases
CCB 210ab	Introduction to Cancer Biology
IMI 216cd	Cellular and Molecular Biology of Parasites
EH 223ab	Advanced Respiratory Physiology
EH 225cd	Advanced Topics in Physiology
CCB 225cd	Genetic Toxicology
CCB 250cd	Molecular and Cellular Toxicology

DBS 231abcd. Interdisciplinary Seminar in Cardiovascular Disease Prevention (Willett, Kawachi)
Covers research in cardiovascular biology, epidemiology, health policy, and social behavior. (5 credits)
Not offered 1998–99.

Independent Study, Laboratory Rotations

Individual students or small groups of students who wish to go beyond the content of regularly scheduled courses may arrange with individual faculty members to participate in departmental research or to undertake specialized readings or studies. Offers hands-on experimental methods of research in the biological sciences and includes individual original laboratory work, assigned readings, and participation in seminars and journal clubs.

Faculty from several HSPH departments are affiliated with DBS and are listed below. Please refer to the index to locate the research interests of HSPH faculty.

Alberto Ascherio	James H. Maguire
Robert B. Banzett	Carl G. Maki
Stephen M. Beverley	Donald K. Milton
Joseph D. Brain	Richard R. Monson
Harriet A. Burge	Lucas M. Neas
James Butler	Bjorn R. Olsen
Hannia Campos	Joseph D. Paulauskis
Harold A. Chapman, Jr.	Karen E. Peterson
David C. Christiani	Willy F. Piessens
John R. David	Lorenz R. Rhomberg
Bruce Demple	Eric B. Rimm
Douglas W. Dockery	Stephen N. Rudnick
Claire M. Doerschuk	P. Barry Ryan
Jeffrey M. Drazen	Frank M. Sacks
Raymond L. Erickson	Leona D. Samson
Myron E. (Max) Essex	John C. Samuelson
John S. Evans	Robert H. Schiestl
Wafaie Fawzi	Robert Schlegel
Timothy E. Ford	Joel D. Schwartz
Jeffrey J. Fredberg	Jacob Shapiro
Laurie H. Glimcher	Steven A. Shea
John J. Godleski	Charles B. Shoemaker
Peter Goldman	Stephanie A. Shore
Rose H. Goldman	Constantinos Sioutas
Beatriz S. González-Flecha	Thomas J. Smith
Michael J. Grusby	Stover H. Snook
Donald A. Harn, Jr.	Joseph G. Sodroski
Joseph J. Harrington	Frank E. Speizer
M. G. Herrera-Acena	John D. Spengler
Robert F. Herrick	Bruce M. Spiegelman
Martin S. Hirsch	Andrew Spielman
Gökhan S. Hotamisligil	Meir J. Stampfer
Howard Hu	Armen H. Tashjian, Jr.
Phyllis J. Kanki	W. Allan Walker
Karl T. Kelsey	Ning Wang
David M. Knipe	Angeline E. Warner
Lester Kobzik	Marianne Wessling-Resnick
Petros Koutrakis	Walter C. Willett
Tun-Hou Lee	Xiping Xu
Howard L. Liber	Yukio Yanagisawa
Klaus Lindpaintner	
John B. Little	
Stephen H. Loring	
John E. Maggio	

Guy L. Reed III, MS, MD (Stanford University); Associate Professor of Immunology. Analysis of platelet activation and cellular interactions by molecular cloning, biochemical, and histological techniques.

Mary E. Russell, MD (University of Health Sciences, Chicago Medical School); Associate Professor of Cardiovascular Biology. Monocyte/macrophage activation; cellular adhesion and migration; arteriosclerosis.

The following faculty member has a secondary appointment at HSPH. His primary affiliation is with Harvard Medical School.

Mark Perrella, MD (University of Nebraska); Assistant Professor in the Division of Biological Sciences. Identification of factors important in regulating vascular tone during septic shock and the molecular mechanisms that regulate these factors.

Adjunct Faculty

Victor Chengwei Shi, MD, MS; Senior Scientist, Novartis Pharmaceuticals, Inc.

DEPARTMENT OF BIOSTATISTICS

Faculty in the Department of Biostatistics contribute to the theory and practice of statistical science as it is

applied to the biomedical and health sciences. The department prepares students for careers in the fields of biostatistics and health decision sciences.

The programs offered by the Department of Biostatistics provide rigorous training in the development of methodology, collaboration, teaching, and consultation on a broad spectrum of health-related problems. The faculty includes leaders in the development of statistical methods for clinical trials and observational studies, studies on the environment, animal experiments, and longitudinal studies. Members of the department lead large multidisciplinary projects and serve on many national and international advisory committees. The department's research in statistical methods and its interdisciplinary collaborations provide many opportunities for student participation.

Current departmental research includes the development of statistical and computing methods for clinical trials, including survival and sequential analysis methodology; environmental and epidemiologic research, including

methods for longitudinal studies, analyses with incomplete data, meta-analysis, and statistical aspects of the study of AIDS; collaborative clinical research in the treatment of cancer and AIDS; quantitative problems in health risk analysis, technology assessment, and clinical decision making; statistical methodology in psychiatric research and in genetic studies; and collaborative research activities with biomedical scientists in other departments at HSPH, Harvard Medical School, and affiliated hospitals.

Applicants to the department should have successfully completed calculus through multivariable integration and at least one semester of linear algebra. Knowledge of a programming language such as FORTRAN or C is required, and introductory courses in probability and statistics and practical knowledge of a statistical computing package such as SAS, SPSS, or Stata are desirable. From time to time the department will admit students without this level of preparation with the understanding that the student will promptly make up any deficiencies, usually by taking additional courses prior to entering the program.

Funding is available to qualified students pursuing the doctoral degree. Most of the funding is through five biostatistics training grants (in AIDS, cancer, the environment, geriatrics, and mental health) and one health decision sciences training grant (in medical informatics). These traineeships require US citizenship or permanent residency. Other funding is awarded on a competitive basis.

Recent graduates have assumed faculty posts at universities and schools of public health, as well as positions in research laboratories and centers in the federal government, in pharmaceutical companies, and in research institutes.

As described below, the department offers both a four-semester and a two-semester Master of Science (SM) program and a Doctor of Science (SD) program with a concentration in Biostatistics, as well as a four-semester SM

program and an SD program with a concentration in Health Decision Sciences. For information about the Master of Public Health concentration in Quantitative Methods, please refer to page 9. Detailed information about requirements and elective options can be found in a handbook distributed by the department.

Master of Science in Biostatistics (four-semester program)

Biostatistics The main purpose of the four-semester SM program with a concentration in Biostatistics is to prepare students for doctoral study, although a limited number of qualified students may pursue the master's degree only.

Of the 80 credits necessary to earn the four-semester SM, 2.5 credits must be used to fulfill the school-wide epidemiology requirement (EPI 200 or EPI 201a), and 25 credits must be earned in the following core courses: BIO 230ab, *Probability Theory and Applications*; BIO 231cd, *Statistical Inference I*; BIO 232ab, *Methods I*; BIO 233cd, *Methods II*; and BIO 235cd, *Regression and Analysis of Variance*. An additional 15 credits must be chosen from biostatistics and epidemiology courses at the level of BIO 210cd or higher (but below 300), of which 10 credits must be chosen from a specific list of biostatistics, health policy and management, and interdisciplinary offerings. In addition to formal course work, students acquire experience in the planning of experiments and the analysis of data by participating in a consulting seminar. Students also choose from a variety of elective courses.

Health Decision Sciences The concentration in Health Decision Sciences offers integrated educational training in decision sciences within the context of health problems. The program is jointly offered by the Departments of Biostatistics and Health Policy and Management. All students must be admitted to the master's program in one department or the other, and degrees are offered through one department or the other.

Of the 80 credits necessary to earn the SM, 2.5 credits must be used to fulfill the school-wide epidemiology requirement (EPI 200 or EPI 201a), and students must complete the following core courses: HPB 280b, *Decision Analysis for Health and Medical Practices*, or HPM 286s, *Decision Analysis in Clinical Research*; HPB 281c, *Methods for Decision Analysis in Health Care Technology Assessment*; HPE 284ab, *Decision Theory*; HPM 287abcd, *Research Seminar on Risk and Decision Analysis*; HPM 288c, *Management Science*; HPM 289cd, *Practicum in Decision Analysis and Cost-Effectiveness*; BIO 230ab, *Probability Theory and Applications*; BIO 231cd, *Statistical Inference I*; and preparation in computing. Ten additional credits must be earned from the Health Decision Sciences core and extended core (see list under SD program), along with at least 10 additional credits in biostatistics. The consulting requirement may be met by obtaining experience under the tutelage of a faculty member. Students also choose from a variety of elective courses.

Decision Analysis for Health and Medical Practices, or HPM 286s, *Decision Analysis in Clinical Research*; HPB 281c, *Methods for Decision Analysis in Health Care Technology Assessment*; HPE 284ab, *Decision Theory*; HPM 287abcd, *Research Seminar on Risk and Decision Analysis*; HPM 288c, *Management Science*; HPM 289cd, *Practicum in Decision Analysis and Cost-Effectiveness*; BIO 230ab, *Probability Theory and Applications*; BIO 231cd, *Statistical Inference I*; and preparation in computing. Ten additional credits must be earned from the Health Decision Sciences core and extended core (see list under SD program), along with at least 10 additional credits in biostatistics. The consulting requirement may be met by obtaining experience under the tutelage of a faculty member. Students also choose from a variety of elective courses.

Master of Science in Biostatistics (two-semester program)

Like the four-semester SM program, the main emphasis of the two-semester program with a concentration in Biostatistics is the preparation of students for doctoral study. The program is designed for students who have a master's degree in one of the mathematical sciences or a doctorate in a quantitative field. Applicants must have a mathematical and statistical background sufficient to achieve a level of proficiency after one year of study comparable to that achieved in the four-semester program. Since completion of the program in one year requires that courses be taken out of sequence, considerable background in probability and statistical inference is needed.

The requirements for the two-semester SM are essentially the same as for the four-semester program. The 25-credit core must be completed, although students who have taken equivalent course work elsewhere may petition to substitute more advanced courses. Greater flexibility is allowed in the other requirements, since only 40 total credits are required. Other courses are selected in consultation with a faculty advisor to complement the student's previous training in biostatistics.

The department does not offer a two-semester program in Health Decision Sciences.

For more information about research and training in Biostatistics, please contact Ellen Fredberg, Administrator, Department of Biostatistics, 677 Huntington Avenue, Boston, MA 02115.

Phone: 617-432-1056

Fax: 617-739-1781

E-mail: dept@hsph.harvard.edu

For more information about research and training in Health Decision Sciences, please contact Milton C. Weinstein, PhD, Department of Health Policy and Management, 718 Huntington Avenue, Boston, MA 02115

Phone: 617-432-0805

E-mail: mcw@hsph.harvard.edu

The Department of Biostatistics offers postdoctoral fellowships for biostatistical training in the areas of AIDS, cancer, environmental health, and mental health. These postdoctoral fellowships, funded by the National Institute of Mental Health or the National Institutes of Health, may be awarded only to US citizens or permanent residents. Candidates for postdoctoral fellowships must have a doctoral degree in biostatistics, statistics, or a related discipline. For more information, please contact the Chair of the Postdoctoral Committee, Department of Biostatistics, 677 Huntington Avenue, Boston, MA 02115.
Phone: 617-432-1056
Fax: 617-739-1781

Faculty

Department Chair: Nan M. Laird, PhD (Harvard University); Henry Pickering Walcott Professor of Biostatistics. Longitudinal studies; non-response and missing data methods; discrete data analysis; Bayesian methods; meta-analysis.

Sudeshna Adak, MS (Indian Statistical Institute), PhD (Stanford University); Assistant Professor of Biostatistics. Spectral analysis of nonstationary time series; time-varying ARMA modeling; generalized linear models.

Rebecca A. Betensky, PhD (Stanford University); Assistant Professor of Biostatistics. Sequential analysis; correlated binary data.

Paul J. Catalano, SD (Harvard University); Assistant Professor of Biostatistics. Repeated measures; multivariate models; dose-response modeling; risk assessment; environmental statistics.

Victor G. De Gruttola, SM, SM, SD (Harvard University); Professor of Biostatistics. Methods for analysis of repeated measures from longitudinal studies; methods for epidemiological analysis of AIDS.

Garrett Fitzmaurice, MSc (University of London), MA (National University of Ireland), SD (Harvard University); Assistant Professor of Biostatistics. Likelihood-based and non-likelihood approaches to analyzing multivariate binary outcomes; methods for analyzing mixed discrete and continuous outcomes.

Peter B. Gilbert, MS, PhD (University of Washington); Assistant Professor of Biostatistics. Statistical methods for HIV and AIDS; survival analysis; efficient estimation in semiparametric models; multinomial logistic regression models; biased sampling models.

Robert J. Gray, SM, PhD (Oregon State University); Senior Lecturer on Biostatistics. Clinical trials; survival analysis; techniques for exploratory data analysis and model building.

David P. Harrington, AM, PhD (University of Maryland); Professor of Biostatistics. Nonparametric methods for censored data; sequential designs for clinical trials.

Michael D. Hughes, MSc, PhD (London University); Associate Professor of Biostatistics. Statistical methods in the design, analysis, and reporting of clinical trials and overviews.

Joseph G. Ibrahim, MS, PhD (University of Minnesota); Associate Professor of Biostatistics. Generalized linear models; Bayesian inferences.

Neil S. Klar, MSc, MMath (University of Waterloo), PhD (University of Western Ontario); Assistant Professor of Biostatistics. Clinical trials and the analysis of correlated binary outcome data.

Doctor of Science in Biostatistics

Biostatistics The doctoral concentration in Biostatistics is designed for those who have demonstrated both interest and ability in scholarly research. Qualified applicants may apply directly to the doctoral program without a prior advanced degree. Candidates must complete a minimum of two academic years of full-time study in residence at HSPH, pass the written departmental comprehensive examination and the school-wide oral qualifying examination, and complete, defend, and submit a thesis.

Beyond the school-wide requirement of introductory epidemiology (EPI 200 or EPI 201a), the course work for the program is built on a 30-credit core curriculum which includes BIO 230ab, *Probability Theory and Applications*; BIO 231cd, *Statistical Inference I*; BIO 232ab, *Methods I*; BIO 233cd, *Methods II*; BIO 235cd, *Regression and Analysis of Variance*; and BIO 251cd, *Statistical Inference II*. In addition, 25 credits of biostatistics courses at the 230 level or higher (but below 300) are required; these courses are chosen by the student in consultation with an advisor. Students must also complete two minors (10 credits each), only one of which may be quantitative (such as theoretical statistics, biomedical computing, or health decision sciences) while the other must be substantive (such as the biology of cancer or AIDS).

Doctoral students are required to participate as a teaching assistant in a course offered by the department. In order to acquire experience in the planning of experiments and the analysis of data, students must take the consulting seminar.

Health Decision Sciences The doctoral concentration in Health Decision Sciences offers integrated educational training in decision analysis, cost-benefit and cost-effectiveness analysis, behavioral decision theory, operations research, applied welfare economics, statistical inference, computer science, and biostatistics, all within the context of health problems. This program is coordinated with, but distinct from, the decision sciences track

in the PhD Program in Health Policy, described under Health Policy and Management (see page 53).

Candidates must complete a minimum of two academic years of full-time study in residence at HSPH, pass the written departmental comprehensive examination and the school-wide oral qualifying examination, and complete, defend, and submit a thesis. The program requires 45 credits of course work in the major field, plus 10 credits in each of two minor fields, one of which must be biostatistics. Health policy and management is acceptable for the other minor, provided the courses focus on subject-oriented rather than quantitative material.

The course work includes the school-wide requirement of introductory epidemiology (EPI 200 or EPI 201a); BIO 230ab, *Probability Theory and Applications*; BIO 231cd, *Statistical Inference I*; 20 credits from the Health Decision Sciences core; and 20 credits from the extended core. The core includes the following courses: HPB 280b, *Decision Analysis for Health and Medical Practices*; HPB 281c, *Methods for Decision Analysis in Health Care Technology Assessment*; HPB 282d, *Cost-Effectiveness and Cost-Benefit Analysis for Health Program Evaluation*; HPM 287abcd, *Research Seminar on Risk and Decision Analysis*; HPM 288c, *Management Science*; HPM 289cd, *Practicum in Decision Analysis and Cost-Effectiveness*; and HPE 284ab, *Decision Theory*. For a list of extended core options, see the department's student handbook.

All doctoral students are required to participate as a teaching assistant in a course offered by the department. In order to acquire experience in decision analysis, students must take the consulting seminar or complete an outside project approved by the seminar director.

PATRICIA STEPHENSON

Master's student, Department of Biostatistics

"I've always loved math," says Patricia Stephenson, whose mother teaches chemistry and whose father

teaches physics. But she was particularly drawn to her current studies because "biostatistics gives me the opportunity to work with people of various backgrounds."

Stephenson says she also enjoys the need "to be knowledgeable about the subject of the study you're involved in. In our field, you should never be isolated. If you meet with someone about a study on breast cancer, for instance, you have to come prepared to speak about the salient issues."

"And you can't effectively analyze a data set if you do so blindly," she adds. "If the P-values don't mean anything to you, and if there's an error in those data, you could come up with crazy, erroneous results."

As Stephenson embarks upon studies toward her doctorate, she sees teaching, as well as research and consulting, in her future.

Courses Offered by the Department of Biostatistics, 1998-99

Please note that this list may be incomplete and is subject to change. Detailed course listings, including information about prerequisites, course activities, and scheduling, are distributed to students with registration information. Either BIO 200 or BIO 201 satisfies the school-wide requirement for an introductory course in biostatistics; however, individual programs may require one or the other.

Letters following course numbers indicate the period(s) in which a course is given: a and b (fall quarters); c and d (spring quarters); e and f (one-week sessions in January and March); s and t (1999 summer sessions).

BIO 112a. Computing Principles and Methods (Allred, Pagano)

Provides basic computer literacy to students from all disciplines. Topics include computer architecture and terminology; E-mail and the World Wide Web; and a variety of Windows-environment packages including word processing, graphics, statistical analysis, spreadsheets, and data management programs. (2.5 credits)

BIO 113. Introduction to SAS

BIO 113b. (Allred, Pagano) (2.5 credits)

BIO 113e. (Fenton, Pagano) (1.25 credits)

BIO 113t. (Allred, Pagano) (2.5 credits)

Provides instruction in the use of SAS to prepare data for statistical analysis. The focus is on database management and programming problems. Discusses basic issues in each of these areas in the context of teaching specific skills required to use SAS effectively.

BIO 114c. C-Programming

Prepares students to write programs in C. Covers variable definitions and data types, arithmetic expressions, program looping and if-statements, single and multidimensional arrays, functions, use of standard libraries, structures, pointers, and strings. (2.5 credits) Offered 1998-99 and alternate years.

BIO 200ab. Principles of Biostatistics (Pagano)

Acquaints students with the basic concepts of biostatistics and their applications and interpretation. Topics include descriptive statistics, graphics, diagnostic tests, probability distributions, inference, tests of significance, association, linear and logistic regression, and life tables. (5 credits)

BIO 200s. Principles of Biostatistics I (Testa)

Presents the first part of introductory biostatistics, covering data presentation, numerical summary measures, rates and standardization, life tables, and sampling distributions. Introduces probability to quantify uncertainty. (2.5 credits)

BIO 200t. Principles of Biostatistics II (Catalano)

Presents the second part of introductory biostatistics, exploring inference in greater depth and emphasizing data analysis. Other topics include comparison of two means, analysis of variance, nonparametric methods, inference on proportions, contingency tables, multiple 2X2 tables, correlation, simple regression, multiple and logistic regression, analysis of survival data, and sampling theory. (2.5 credits)

BIO 201ab. Introduction to Statistical Methods (Wei)

Covers basic statistical techniques for analyzing data from epidemiology, environmental health, and biomedical and other relevant research. Topics include descriptive statistics, probability, estimation and inference, distribution-free methods, contingency tables, regression analysis, analysis of variance, and study design. Designed as an alternate to BIO 200ab, for students desiring emphasis on theoretical developments, or for those having had an introductory statistics course at the level of BIO 200. (5 credits)

Stephen W. Lagakos, MPhil, PhD (George Washington University); Professor of Biostatistics and Director of the Center for Biostatistics in AIDS Research. Statistical methods arising in AIDS research; clinical trials.

Stuart R. Lipsitz, MS (University of North Carolina), SD (Harvard University); Associate Professor of Biostatistics. Resampling methods; categorical data; longitudinal data; missing data. (On leave until July, 1999)

Kathryn L. Lunetta, MS, PhD (University of Michigan); Assistant Professor of Biostatistics. Statistical issues in human genetics and methodology for mapping genetic markers.

Ian C. Marschner, PhD (La Trobe University, Australia); Associate Professor of Biostatistics. Statistical methodology for monitoring and predicting the HIV/AIDS epidemic.

Donna S. Neuberg, MA (University of Chicago), MA (State University of New York, Stony Brook), SD (Harvard University); Senior Lecturer on Biostatistics. Cancer clinical trials; genetic epidemiology.

Marcello Pagano, SM (University of Florida), PhD (Johns Hopkins University); Professor of Statistical Computing. Statistical computing; clinical trials; epidemic modeling.

James M. Robins, MD (Washington University); Professor of Epidemiology and Biostatistics. Development of analytic methods for drawing causal inferences from complex observational and randomized studies with time-varying exposures or treatments.

Andrea G. Rotnitzky, MA, PhD (University of California, Berkeley); Associate Professor of Biostatistics. Longitudinal data analysis; analysis of repeated categorical data and cluster correlated data.

Louise M. Ryan, PhD (Harvard University); Professor of Biostatistics. Rodent tumorigenicity experiments; teratology experiments; clinical trials; goodness-of-fit tests; survival analysis.

Donna L. Spiegelman, SM, SD (Harvard University); Associate Professor of Epidemiology and Biostatistics. Binary data models with measurement error and misclassification in model covariates.

Kenneth E. Stanley, MA (Bucknell University), PhD (University of Florida); Lecturer on Biostatistics. Estimating mortality attributable to tobacco in the presence of incomplete information.

Marcia A. Testa, MPH, MPhil, PhD (Yale University); Lecturer on Biostatistics. Design, methodology, measurement, and analytical techniques for evaluation of quality of life indices in therapeutic clinical trials; design and structure of clinical database information management systems.

Florin Vaida, PhD (University of Chicago); Assistant Professor of Biostatistics. Markov chain Monte Carlo; likelihood inference; nonparametric modeling; longitudinal data.

Matthew P. Wand, PhD (Australian National University); Associate Professor of Biostatistics. Nonparametric curve estimation; Markov chain Monte Carlo; computational statistics.

James H. Ware, PhD (Stanford University); Frederick Mosteller Professor of Biostatistics and Acting Dean of the Faculty of Public Health. Design and analysis of longitudinal studies; statistical aspects of environmental health research.

Lee-Jen Wei, PhD (University of Wisconsin); Professor of Biostatistics. Design and analysis of clinical trials; repeated measurements analysis; survival analysis.

Milton C. Weinstein, AM, MPP, PhD (Harvard University); Henry J. Kaiser Professor of Health Policy and Management (Health Policy and Management and Biostatistics); Professor of Medicine, Harvard Medical School. Cost-effectiveness of health practices and technologies.

Paige L. Williams, BSPH, PhD (University of North Carolina); Associate Professor of Biostatistics. Cancer risk assessment and other areas of environmental statistics, especially animal carcinogenicity bioassays.

David Wypij, ScM (Brown University), MS, PhD (Cornell University); Associate Professor of Biostatistics. Longitudinal data analysis; repeated measures and growth curve models; discrete data.

Ronghui (Lily) Xu, MA, PhD (University of California, San Diego); Assistant Professor of Biostatistics. Survival analysis, particularly in relation to proportional hazards models; goodness of fit.

BIO 206st. Statistical Principles in Medical Research (Orav)

Includes concepts in probability and statistics, hypothesis testing, nonparametrics, discrete data analysis, regression and analysis of variance. Emphasizes the design and analysis of clinical studies. Designed primarily for participants in the Program in Clinical Effectiveness. (5 credits)

BIO 210cd. The Analysis of Rates and Proportions (Klar, Laird)

Emphasizes concepts and methods for analysis of data that are categorical, rate-of-occurrence, and time-to-event. Stresses applications in epidemiology, clinical trials, and other public health research. Topics include measures of association, 2X2 tables, stratification, matched pairs, logistic regression, model building, analysis of rates, and survival data analysis using proportional hazard models. (5 credits)

BIO 211cd. Regression and Analysis of Variance in Experimental Research (Rotnitzky)

Covers analysis of variance and regression, including details of data-analytic techniques and implications for study design. Also included are probability models, computing, and the formulation of scientific questions in terms of statistical models. (5 credits)

BIO 212cd. Survey Research Methods in Community Health (Laird, Mangione)

Covers research design, sample selection, questionnaire construction, interviewing techniques, reduction and interpretation of data, and related facets of population survey investigations. Focuses on applying survey methods to problems of health program planning and evaluation. (2.5 credits)

BIO 213ab. Applied Regression for Clinical Research (Orav)

Introduces students involved with clinical research to the practical application of multiple regression analysis. Covers linear regression, logistic regression, and proportional hazards survival models, as well as general concepts in model selection, goodness of fit, testing procedures, and an introduction to underlying likelihood theory. (5 credits)

BIO 214. Principles of Clinical Trials

BIO 214c. (Marschner)

BIO 214t. (Stanley, Gelber)

Covers types of clinical research, study design, treatment allocation, randomization and stratification, quality control, sample size requirements, patient consent, and interpretation of results. Focuses on the scientific, policy, and management aspects of clinical trials. (2.5 credits)

BIO 217t. Linear Regression and Longitudinal Analysis (J. H. Ware, Neuberg)

Introduces multiple linear regression and linear models for longitudinal data. Explains the concepts and statistical principles underlying linear regression analysis, describes methods for multiple regres-

sion analysis, and introduces the use of linear models in the analysis of longitudinal data. (2.5 credits) Not offered 1998-99.

BIO 219ab. Statistical Methods for Health Policy and Management (Testa)

Introduces probability and statistics, with emphasis on their application to health policy and management contexts. Topics include descriptive statistics, probability and probability distributions, sampling distributions, experimental design and sampling methods, confidence intervals, hypothesis testing and p-values, nonparametric methods, and an introduction to sample linear regression. (5 credits)

BIO 222ab. Basics of Statistical Inference (Neuberg)

Introduces probability theory and mathematical statistics underlying techniques in public health research. Topics include probability distributions, means, variances and expected values, finite sampling distributions, parameter estimation, confidence intervals, and hypothesis testing. (5 credits)

BIO 223cd. Applied Survival Analysis and Discrete Data Analysis (Williams)

Covers such topics as parametric distributions, hazard and survivorship functions, estimation of survival distributions, two-population problems, proportional hazard models, accelerated failure time models, tests of proportional hazard assumption, time varying covariates, predicted survival, and useful software. (5 credits)

BIO 224t. Survival Methods in Clinical Research (Davis)

Covers common approaches to display and analysis of survival data, including Kaplan-Meier curves, log rank tests, and Cox proportional hazards regression. Computing, using SAS, is an integral part of the course. (2.5 credits)

BIO 225c. Multiple Regression Analysis for Health Policy and Management (Normand)

Provides a nonmathematical approach to the use and interpretation of regression modeling in health policy and management research, with emphasis on simple linear and multiple regression, including the analysis of variance. Other topics include logistic, Poisson, and proportional hazards regression. (2.5 credits)

BIO 226ab. Applied Longitudinal Analysis (Fitzmaurice)

Introduces modern methods for the analysis of correlated data, repeated measures, correlated outcomes, and longitudinal data. Topics include repeated measures ANOVA, random effects and growth curve models, Hotelling's T2, MANOVA, and generalized linear models for correlated data, including generalized estimating equations (GEE). (5 credits)

BIO 228ab. Statistical Models and Methods in Human Genetics (Lunetta)

Introduces basic methods and algorithms for the analysis of genetic data with an emphasis on gene mapping. Topics include basic human genetics, allele frequency estimation, segregation and linkage analysis, computing likelihood on pedigrees, nonparametric linkage tests, polygenic and multifactorial models, variance component analysis, and association tests. (5 credits) Not offered 1998–99.

BIO 230ab. Probability Theory and Applications (D. Harrington)

Covers axiomatic foundations, frequency and personal concepts of probability, combinatorics, discrete and continuous sample spaces, independence and conditional probability, random variables, expectation operator, moments, generating functions and characteristic functions, standard distributions, transformations, sampling distributions related to the normal distribution, convergence concepts, weak and strong laws of large numbers, the central limit theorem, and elements of stochastic processes. (5 credits)

BIO 231cd. Statistical Inference I (Betensky)

Discusses principles of data reduction, describes methods of point and interval parameter estimation and the small and large sample properties of estimators, and covers methods of hypothesis testing and optimality properties of tests. (5 credits)

BIO 232ab. Methods I (Xu)

Introduces parametric and nonparametric methods for continuous outcomes, including one- and two-sample t-tests, linear rank tests, correlation, ANOVA, linear regression, and basic design of experiments. Other topics include methods of exploratory data analysis and robust estimation. (5 credits)

BIO 233cd. Methods II (Hughes)

Focuses on analysis of categorical and count data and introduces methods for analysis of survival data. Covers sampling plans, analysis of contingency tables, construction of confidence intervals and hypothesis tests, measures of association, logistic regression, and log-linear analysis. Includes survival topics such as estimation of survival distributions, comparison of groups, and regression models. (5 credits)

BIO 235cd. Regression and Analysis of Variance (Ibrahim)

Describes procedures of estimation and hypothesis testing for linear models and discusses techniques of analysis of variance and experimental design. (5 credits)

BIO 240cd. Sample Surveys (Zaslavsky, Laird)

Covers methods for design and analysis of sample surveys, including questionnaire design and evaluation. Topics in estimation methods include calculation and use of sampling weights, and variance estimation methods. (2.5 credits) Not offered 1998–99.

BIO 243a. Nonparametric Methods (Wypij)

Introduces nonparametric methods, including permutation tests, permutation limit theorems, 2-sample rank tests and their asymptotic efficiency, k-sample tests, 1-sample tests of location, rank tests for symmetry, and independence. (2.5 credits) Not offered 1998–99.

BIO 244ab. Analysis of Failure Time Data (Lagakos)

Discusses the theoretical basis of concepts and methodologies associated with survival data and censoring, nonparametric tests, and competing risk models. Much of the theory is developed using counting processes and martingale methods. (5 credits)

BIO 245ab. Analysis of Multivariate and Longitudinal Data (Wypij)

Presents classical and modern approaches to the analysis of multivariate observations, repeated measures, and longitudinal data. Topics include the multivariate normal distribution, estimation of the mean and covariance matrix, Hotelling's T², MANOVA, the multivariate linear model, and random effects and growth-curve models. Also discusses computational issues for traditional and new methodologies. (5 credits)

BIO 247cd. Design of Scientific Investigations (De Gruttola)

Covers aspects of statistical theory and practice relevant to the design of health-related scientific investigations. Topics include sample size considerations, basic principles of experimental design, block designs, factorial experiments, response surface modeling, clinical trials, adaptive designs, cohort studies, early detection trials, and double-sampling techniques. (5 credits) Offered 1998–99 and alternate years.

BIO 248cd. Advanced Statistical Computing (Gray)

Presents computing algorithms useful in statistical research and advanced applications. Topics include computer arithmetic, matrix algebra, numerical optimization methods with application to maximum likelihood estimation and GEEs, spline smoothing and penalized likelihood, numerical integration, and random number generation and simulation methods. (5 credits) Not offered 1998–99.

BIO 249ab. Bayesian Methodology in Biostatistics (Ibrahim)

Introduces the fundamentals of the Bayesian paradigm including Bayes's theorem, the likelihood principle, prior distributions, posterior distributions, and predictive distributions. Topics include Bayesian analysis of linear models, generalized linear models, survival models, random effects models, Bayesian methods in meta-analysis, and design and analysis of clinical trials. (5 credits) Not offered 1998–99.

Marvin Zelen, AM (University of North Carolina), PhD (American University); Professor of Statistical Science; Member of the Faculty of Arts and Sciences. Theory and practice of clinical trials; methodology for early detection of disease. (On leave until July, 1999)

The following faculty members have secondary appointments at HSPH. Their primary affiliation is with Harvard Medical School.

Roger B. Davis, MA (University of Rochester), SD (Harvard University); Associate Professor in the Department of Biostatistics. Design and analysis of clinical trials; recursive partitioning methods.

Dianne M. Finkelstein, AM (Wayne State University), PhD (University of Michigan); Associate Professor in the Department of Biostatistics. Carcinogenicity experiments; survival analysis; statistical methods for AIDS clinical trials and epidemiology.

Richard D. Gelber, SM (Stanford University), PhD (Cornell University); Professor in the Department of Biostatistics. Design and analysis of clinical trials.

Rebecca S. Gelman, PhD (State University of New York at Buffalo); Associate Professor in the Department of Biostatistics. Clinical trials; disease screening; survival methods.

Robert J. Glynn, MA (Boston College), PhD (Brandeis University), SM, SD (Harvard University); Associate Professor in the Department of Biostatistics. Analysis of longitudinal data; nonresponse in sample surveys; epidemiology of eye diseases.

Mei-Ling Ting Lee, MS (National Tsing-Hua University), MA, PhD (University of Pittsburgh); Assistant Professor in the Department of Biostatistics. Lifetime data analysis; categorical data analysis.

Sharon-Lise T. Normand, MSc (University of Western Ontario), PhD (University of Toronto); Associate Professor in the Department of Biostatistics. Bayesian inference; graphical models; meta-analysis.

E. John Orav, PhD (Stanford University); Associate Professor in the Department of Biostatistics. Statistical computing and simulation; stochastic modeling; bioassay.

Bernard A. Rosner, MA (Stanford University), PhD (Harvard University); Professor in the Department of Biostatistics. Analysis of clustered binary data; longitudinal data analysis.

David A. Schoenfeld, AM, PhD (University of Oregon); Associate Professor in the Department of Biostatistics. Statistics in medical research; linear models; bioassay; survival theory.

Grace Wyshak, SM (Harvard University), PhD (Yale University); Associate Professor in the Departments of Biostatistics and Population and International Health. Biostatistical and demographic methods; women's reproductive health.

Adjunct Faculty

Cyrus R. Mehta, SM, PhD; President, Cytel Software Corporation.

DeJuran Richardson, MS, PhD; Associate Professor of Mathematics, Lake Forest College.

Nicholas J. Schork, MA, MA, PhD; Associate Professor, Department of Genetics, Case Western Reserve University.

Michael A. Stoto, AM, PhD; Director, Division of Health Promotion and Disease Prevention, Institute of Medicine, National Academy of Sciences.

BIO 251cd. Statistical Inference II (Wand)

Considers asymptotic theory and theories of optimality. Topics include limit theorems, multivariate delta method, properties of maximum likelihood estimators, asymptotic properties of generalized methods of moments estimators, semiparametric efficient estimation, asymptotic relative efficiency, and hypothesis tests. (5 credits)

BIO 262ab. Statistical Problems in Drug Development (Testa)

Introduces applications of statistical methodology required for the various phases of pharmaceutical drug development. Features guest lecturers from the pharmaceutical industry. (2.5 credits) Offered 1998-99 and alternate years.

BIO 263cd. Computational Methods for Categorical Data Analysis (Mehta)

Studies nonparametric and semiparametric statistical methods of inference for a variety of problem types, with an emphasis on the development of efficient numerical algorithms for exact and Monte Carlo inference. (2.5 credits) Not offered 1998-99.

BIO 266d. Design and Analysis of Animal Bioassay (L. Ryan, Catalano, Williams)

Provides a foundation for methodologic research in bioassay design and analysis. Emphasizes statistical issues in rodent carcinogenicity, developmental toxicity, and neurotoxicity bioassays. (2.5 credits) Not offered 1998-99.

BIO 268ab. Statistical Methods in Human Genetics (Laird, Lunetta)

Introduces statistical procedures for investigating the inheritance of human characteristics through studies of families and populations. Focuses on segregation, linkage, and DNA sequence analysis. (2.5 credits) Not offered 1998-99.

BIO 269b. Statistical Methods in Psychiatry (Normand, Fitzmaurice)

Covers assessment of inter-rater reliability, analysis of repeated measures experiments, methods for handling dropouts and missing data, measurement error models, ROC curves, and methods of segregation and linkage analyses. (2.5 credits) Offered 1998-99 and alternate years.

BIO 270ab. Statistical Science Outreach (Zelen)

Aims to broaden the background of students in probability and statistics. Students give short presentations from expository articles and papers chosen on the basis of ideas rather than technical content. (2.5 credits) Not offered 1998-99.

BIO 271ab. Statistical Computing Environments (Laird, Horton)

Acquaints students with modern computing environments in the field of biostatistics. Topics include programming environments in statistics, algorithmic and symbolic mathematics, source language programming and its tools, editors, typesetters, Internet tools, and UNIX. (2.5 credits)

BIO 274cd. Applied Stochastic Processes and Models in Public Health (Zelen)

Aims to develop aspects of stochastic processes that are relevant for modeling important problems in public health. Topics include Poisson processes, birth and death processes, Markov chains and processes, and semi-Markov processes. (5 credits) Not offered 1998-99.

BIO 276cd. Sequential Analysis (Betensky)

Introduces the methods of sequential analysis for hypothesis testing and estimation, defines Brownian motion and the related normal random walk, and presents general concepts of continuous time versus discrete time monitoring and rejection of the null versus "acceptance" of the null. Also includes the Sequential Probability Ratio Test, the related O'Brien-Fleming test, and the repeated significance test and the related Pocock test. Other topics include spending functions and their role in converting a continuous time stopping boundary into discrete time boundary values, early stopping in favor of the null, and interval estimation of prescribed accuracy. (2.5 credits) Offered 1998-99 and alternate years.

BIO 278a. Regression with Non-Normal Data (Adak)

An advanced course in statistical models for non-normal data, students will be introduced to generalized linear models as a unifying framework for commonly used statistical methods such as multiple regression, logistic regression, and Poisson regression. Likelihood inference will be developed using the exponential family of distributions, and extensions to quasi-likelihood methods will be discussed. Also introduced will be nonparametric models in which the "linear" assumption of generalized linear models can be relaxed. (2.5 credits) Offered 1998-99 and alternate years.

BIO 279d. Smoothing in Biostatistical Modeling (Wand)

This course presents some of the main smoothing techniques by which non-linear structure can be incorporated into a statistical model without the need for parametric modeling. Computational and some theoretical issues will also be discussed. The package S-PLUS will be used for computing. (2.5 credits) Offered 1998-99 and alternate years.

Independent Study

Individual students or small groups of students who wish to go beyond the content of regularly scheduled courses may arrange with individual faculty members to participate in departmental research or undertake special projects in the following areas: statistical methods; teaching of biostatistics; consultation; computing; study design; and data analysis.

DEPARTMENT OF CANCER CELL BIOLOGY

The program features laboratory research that combines recent advances and techniques in biochemistry, molecular and cell biology, and genetics to focus on the mechanisms involved in the development of cancer and the means for its prevention. Specific emphases include the growth control of cancer cells, the damage and repair of DNA, particularly in response to chemicals and oxidants that are present in the environment, and the biological effects of low-dose radiation exposure. The department has component divisions of Radiation Biology and Toxicology.

Radiation Biology

The research and training program in Radiation Biology emphasizes studies at the cellular and molecular levels in an integrated approach to the investigation of the lethal, mutagenic, and carcinogenic consequences of exposure to radiation and chemical agents and the role of genetic instability in the development of cancer. Goals include not only defining the hazardous effects of such exposures, but also examining the mechanisms involved in these effects. Although the research includes both mechanistic and applied studies utilizing in vitro systems—primarily human cells in culture—emphasis is placed on a molecular-level approach that includes a broad range of molecular biological and recombinant DNA techniques.

Toxicology

The research and training program in Toxicology explores the interactions of environmental chemicals with a variety of cellular and sub-cellular systems, the biochemical and molecular mechanisms of toxicity, and the health implications of environmental exposure. As it is often necessary to consider and analyze the relation between chemical, biological, and social factors affecting both the nature of and response to occupational or environmental exposure, the program stresses interdisciplinary approaches that join the power of modern

The goals of the Department of Cancer Cell Biology are to promote and conduct research and training on the effects of radiation and environmental chemicals on the health of human beings.

molecular genetics and cell biology with the problem orientation of public health. Research includes such topics as receptor-mediated toxicity, tumor promotion, biochemical and genetic responses to oxidative stress, molecular biology of DNA repair and mutagenesis in prokaryotes and eukaryotes, genetic recombination and predictive carcinogenesis, and molecular mechanisms of genetic instability in cancer and aging.

Doctor of Philosophy in Biological Sciences in Public Health (BPH) (Cancer Cell Biology)

Students wishing to study in areas relevant to this department should apply to the Biological Sciences in Public Health program. This program offers the PhD degree through Harvard University's Graduate School of Arts and Sciences, Division of Medical Sciences, Committee on Biological Sciences in Public Health.

For more information about research and training in Cancer Cell Biology, please contact Rebecca Anapolle, Department of Cancer Cell Biology, 665 Huntington Avenue, Boston, MA 02115.

Phone: 617-432-1871

Fax: 617-432-1780

E-mail: ranapoll@sph.harvard.edu.

For application materials and information about admission to the PhD program, please contact the Admissions Office, Division of Medical Sciences, Harvard Medical School, 260 Longwood Avenue, Boston, MA 02115.

Phone: 617-432-0162

Applicants who have specific questions about the PhD program may contact Ruth Kenworthy, Administrator, Division of Biological Sciences, 665 Huntington Avenue, Boston, MA 02115.

Phone: 617-432-4470

Fax: 617-432-4098

E-mail:

kenworthy@cvlab.harvard.edu.

Faculty

Department Chair: John B. Little, MD (Boston University); James Stevens Simmons Professor of Radiobiology and Director of John B. Little Center for Radiation Sciences and Environmental Health. Radiation biology and experimental carcinogenesis; cellular studies of transformation, mutagenesis, and cytogenetic damage in vitro; molecular mechanisms of mutagenesis and oncogene expression; genetic susceptibility to cancer in human populations.

Bruce Demple, PhD (University of California, Berkeley); Professor of Toxicology. Repair enzymes for oxidative DNA damage; molecular biology of cellular responses to oxidative stress.

Karl T. Kelsey, MD (University of Minnesota), MOH (Harvard University); Professor of Environmental Health and Cancer Biology. Occupational and environmental carcinogenesis, with emphasis on the study of workplace mutagen and carcinogen exposure, using epidemiological application of cytogenetic and molecular endpoints.

The PhD program is designed to offer a firm foundation in the basic biomedical sciences, as well as in epidemiology and biostatistics. Specific courses supplement this core, as dictated by individual research concentrations. Students in this program engage in laboratory rotations in three different research areas to enable them to assess realistically their interests in a thesis project and to evaluate the suitability of the laboratory and mentor. At the completion of these rotations, students select an area of concentration and a thesis research laboratory and complete the required curriculum. A qualifying examination must be passed before engaging in thesis work, and the thesis must be defended before the granting of the PhD. Some students also participate in Master of Biomedical Science program, which is designed to offer PhD students a greater knowledge of human biology and disease.

Applicants generally have a bachelor's degree and demonstrated competence in organic and biological chemistry, general biology, physics, and calculus. Those deficient in one of these areas may be admitted provisionally on the condition that appropriate courses will be taken before and/or after entering the program. Applicants must take both the GRE general and subject tests by October in order to meet the application deadline of December 15.

All students admitted to the program receive a stipend and tuition support. Students are encouraged to apply for fellowships from outside sources since certain external fellowships provide higher stipends. While funds to support international students are limited, one special scholarship is available each year for a student from a developing, subSaharan African country. There is also a university-wide fellowship program that provides funding to qualified under-represented minority students in the sciences.

Graduates ordinarily assume positions as faculty members and research scientists in graduate schools, medical schools, research institutes, or schools of public health. Career opportunities in the biological sciences as they apply to public health are expected to grow both in academia and in the biotechnology and pharmaceutical industries.

DAN GEBOW

Doctoral student, Department of Cancer Cell Biology

At the age of five, Dan Gebow's curiosity about why something invisible could alter the life span of crickets

prompted him to conduct dosage-and-timing experiments with the insects in his parents' microwave. "I was admonished by my mother," Gebow notes.

Over the years, Gebow remained interested in radiation issues, and moved steadily toward his current doctoral work in radiation biology.

Gebow's research has brought him to tumor suppressor gene p53. "P53 is mutated in 50 percent of all cancers," he says, "and is a large factor in genomic instability. We think p53 may be one of the causes of the high prevalence of cancer."

His postgraduate plans involve a new project at the University of California in Santa Barbara, developing "novel fungicides to fight *Candida albicans*. My long-term goal," Gebow says, "is to start a nonprofit cancer center, following up on both areas of research and beginning new investigations."

Courses Offered by the Department of Cancer Cell Biology, 1998-99

Please note that this list may be incomplete and is subject to change. Detailed course listings, including information about prerequisites, course activities, and scheduling, are distributed to students with registration information.

Letters following course numbers indicate the period(s) in which a course is given: a and b (fall quarters); c and d (spring quarters); e and f (one-week sessions in January and March); s and t (1999 summer sessions).

CCB 204ab. Principles of Toxicology (Schiestl, Milton)

Emphasizes mechanisms of injury and clinical consequences following exposures to environmental and occupational chemicals. Examines actions at the molecular, cellular, organ system, and organismal levels. Discusses methods for detecting, evaluating, analyzing, and combating toxic effects. (5 credits)

CCB 207ab. Introduction to Cancer Biology: Radiation Biology (Little)

Examines the elements of cancer biology by studying the genotoxic and carcinogenic effects of ionizing radiation. Topics include the induction and repair of DNA damage, the processes of cell killing, mutagenesis and neoplastic cell transformation, and the properties of human cancers. Emphasizes human epidemiologic data for radiation carcinogenesis and their use in risk analysis. (5 credits) Offered 1998–99 and alternate years.

CCB 210ab. Introduction to Cancer Biology

Emphasizes current experimental approaches to studying cancer biology and the process of carcinogenesis. Topics include the biology of cell modification and differentiation, the phenotype of the cancer cell, properties of human and animal cancers, the process of cell transformation, mutagenesis, carcinogen metabolism, and cancer epidemiology. (5 credits) Not offered 1998–99.

CCB 212cd. Molecular and Cellular Endocrinology (Tashjian)

Examines current knowledge and experimental approaches to understanding the biosynthesis and secretion of peptide and steroid hormones, and the biochemical and molecular mechanisms by which hormones act on target cells to regulate differentiated functions. Topics include structure and regulation of protein hormone genes, hormone receptor structure and transduction mechanisms, and control of cellular calcium. (5 credits) Offered 1998–99 and alternate years.

CCB 225cd. Genetic Toxicology (Samson)

Explores the biological consequences of the interaction of DNA damaging agents with the genome. Topics include DNA structure, DNA repair, DNA damage-inducible processes, mutagenesis and mutational spectra, cell death by apoptosis, and genetic toxicity testing. (5 credits) Offered 1998–99 and alternate years.

EPC 249a. Molecular Biology for Epidemiologists (Glassner, Hunter)

Presents an overview of molecular biology and techniques commonly used in the laboratory and in epidemiological research. Topics include the structure of DNA and genes, DNA replication, transcription and RNA translation. (2.5 credits)

CCB 250cd. Molecular and Cellular Toxicology (Demple)

Examines key issues and approaches in modern toxicology, focusing on emerging research at the molecular and cellular levels. Topics include pathology of cell cycle, carcinogenesis, genetic toxicology, and molecular epidemiology. (5 credits) Not offered 1998–99.

Independent Study

Individual students or small groups of students who wish to go beyond the content of regularly scheduled courses may arrange with individual faculty members to participate in departmental research or to undertake specialized readings or studies in molecular, cellular, biochemical, and environmental toxicology.

Carl G. Maki, PhD (Kansas State University); Assistant Professor of Radiobiology. Cancer biology; radiation research; DNA repair; cell cycle regulation.

Leona D. Samson, PhD (London University); Professor of Toxicology. Cell response to DNA damage at the biological, biochemical, and genetic levels; mechanisms of mutagenesis and cell killing.

Robert H. Schiestl, PhD (University of Vienna); Associate Professor of Toxicology. Mechanisms of DNA repair and recombination with relevance to carcinogenesis and gene targeting, examined through studies carried out in the yeast *Saccharomyces cerevisiae* in human and mouse cells and in transgenic animals.

Armen H. Tashjian, Jr., MD (Harvard University); Professor of Toxicology; Professor of Biological Chemistry and Molecular Pharmacology, Harvard Medical School. Development and exploitation of differentiated cell culture systems for mechanistic studies on uptake, metabolism, and cytotoxic actions of environmental chemicals; mechanism of action for tumor promoters; genetic and biochemical studies in hereditary human cancer; membrane transduction and signaling mechanisms.

The following faculty member has a secondary appointment at HSPH. His primary affiliation is with Harvard Medical School.

Howard L. Liber, PhD (Massachusetts Institute of Technology); Associate Professor of Radiobiology. Development and utilization of cellular and molecular methods to investigate mutagenesis in human cells, from both mechanistic and environmental perspectives.

Adjunct Faculty

Peter Ofner, MRSC, PhD; Associate Professor, Department of Pharmacology and Experimental Therapeutics, Tufts University School of Medicine.

Robert Schlegel, MPH, PhD; Manager, Corning Division, Ciba/Chiron Corporation.

Yuji Tanaka, MD; Assistant Professor of Medicine, University of Tokyo School of Medicine.

DEPARTMENTS REORGANIZED, RENAMED

People who have seen previous years' Registers may be wondering what happened to the Departments of Cancer Biology (CB), Molecular and Cellular Toxicology (MCT), and Tropical Public Health (TPH). These departments were reorganized and renamed in 1997, and their work and scholarship continues within the new Departments of Cancer Cell Biology (CCB) and Immunology and Infectious Diseases (IID). The following story is reprinted from the September 12, 1997, issue of the HSPH newsletter *Around the School*.

The old Department of Cancer Biology comprised three connected, but distinct, areas: radiobiology and carcinogenesis, virology, and immunology. Two of these areas, virology and immunology, have been combined with TPH to produce IID. Radiobiology and carcinogenesis, together with MCT, create CCB. Max Essex, chair of the former Department of Cancer Biology, is now chair of IID, while John Little, professor of radiobiology, chairs CCB.

The departments have been reorganized under new guiding principles. As Essex explained, HSPH departments are organized either by discipline, as are the Departments of Epidemiology and Biostatistics, or by problem, environment, or population, as are the Departments of Environmental Health or Maternal and Child Health. The difficulty with departments organized under the latter method is

that the organizational principle may change over time: "Twenty years ago," said Essex, "the approaches used in the study of parasitic diseases, as in the Department of Tropical Public Health, were very different from the approaches used in virology. Over time, the methods and strategies have become very much the same. We're all trying to understand how and why viruses or bacteria or parasitic organisms or other infectious agents cause disease and epidemics, why epidemics spread the way they do, and what we can do to check that spread."

"There has always been a great deal of collaboration between the faculty and students in virology, immunology, and tropical public health," said Essex. "Faculty from any combination of these areas have been working with one another on research projects or sitting together on thesis advisory committees. For years, we've been doing as much collaborating between our departments as happens within many other HSPH departments, so this new organization makes a lot of sense from a teaching and training perspective."

Little expressed similar thoughts about the relationships between the students and faculty in the old CB area of radiobiology and carcinogenesis and the old MCT. "Our work is complementary," said Little. "Both of the former departments were working with factors relating to the origins of cancer. We've been working with our colleagues in toxicology for years, and now we'll have greater opportunities for collaboration and joint processes. I think this merger means a broadening of horizons for our students, with more and different types of laboratories to work in and rotate through."

"The formation of these two departments is good for the school in that it creates a critical mass in each of two departments, one focused on increasing our understanding of the genesis of cancer and the other looking at immunology and infectious diseases," said Little. "It allows us to bring in new faculty and expand our research and teaching resources."

DEPARTMENT OF ENVIRONMENTAL HEALTH

Faculty in the department study the pathogenesis and prevention of environmentally produced illnesses and act as a catalyst for scientifically based public health advances. Research approaches range from the molecular to the epidemiologic.

The Department of Environmental Health focuses on complex problems that require the insights of many specialties. The department's faculty, research staff, and students reflect the multidisciplinary nature of the field and include chemists, engineers, epidemiologists, applied mathematicians, physicians, occupational health nurses, physiologists, cell biologists, molecular biologists, and physicists. Teaching and research activities of the department are carried out through four main concentrations: Environmental Epidemiology, Environmental Science and Engineering, Occupational Health, and Physiology, as well as in several areas of interest that span two or more concentrations. All of these are described below.

ENVIRONMENTAL EPIDEMIOLOGY

Environmental epidemiology focuses on identifying and measuring the influence of environmental factors (physical, chemical, and biologic) on human disease in a community, providing scientific evidence for sound environmental and health policies. The research program integrates epidemiologic methods with techniques borrowed from other fields to assess environmental health risks, including the cognitive and cardiovascular effects of lead; the effects of petrochemical exposures on reproductive outcomes; the effects of air pollution on respiratory and cardiovascular health; the effects of infectious agents and disinfection by-products in drinking water; and biomarkers of environmental exposure. The concentration has ties with policy makers in the US and abroad, and has research and training projects under way around the globe.

The mission of the Department of Environmental Health is to advance the health of all people in occupational and community settings in the US and around the world through research and training in environmental health.

The degree programs in this area prepare students for research careers in environmental epidemiology. Recent graduates hold positions in academic institutions, in government agencies, and as private consultants. Financial support for Environmental Epidemiology students may be available to US citizens and permanent residents through NIH-sponsored training grants.

As described below, the Environmental Epidemiology concentration offers both a four-semester and a two-semester Master of Science (SM) program in Environmental Health, as well as a program leading to the Doctor of Science (SD) degree. The program collaborates with the Department of Epidemiology for students seeking an SD in Epidemiology with a focus on environmental health. Please see page 9 for information about the Master of Public Health concentrations in Occupational and Environmental Health and in Quantitative Methods.

For more information about research and training in Environmental Epidemiology, please contact Douglas W. Dockery, SD, Department of Environmental Health, 665 Huntington Avenue, Boston, MA 02115.

dockery@sparc6b.harvard.edu

Faculty

Department Chair: Joseph D. Brain, SM, SM, SD (Harvard University); Cecil K. and Philip Drinker Professor of Environmental Physiology and Director of the Kresge Center for Environmental Health. Function and structure of pulmonary macrophages; deposition and clearance of inhaled particles and responses to them; respiratory infection.

Harriet A. Burge, MA (San Francisco State University), PhD (University of Michigan); Associate Professor of Environmental Microbiology. Aerobiology; bioaerosols in indoor air, including sampling, analysis, and health effects; fungus allergen ecology, characterization, prevalence, and health effects.

James P. Butler, AM, PhD (Harvard University); Senior Lecturer on Physiology. Lung structure and function; parenchymal micromechanics; magnetic twisting cytometry; nemoendocrinology; avian physiology.

David C. Christiani, MD (Tufts University), SM, MPH (Harvard University); Professor of Occupational Medicine and Epidemiology and Director of the Education and Research Center for Occupational Safety and Health; Professor of Medicine, Harvard Medical School. Occupational diseases; biomarkers and molecular epidemiology.

Douglas W. Dockery, SM (Massachusetts Institute of Technology), SM, SD (Harvard University); Associate Professor of Environmental Epidemiology; Associate Professor of Medicine (Epidemiology), Harvard Medical School. Epidemiologic studies of respiratory health effects of air pollution; influence of environmental exposures on lifetime development of respiratory disease.

Master of Science in Environmental Health (four-semester program)

The master's programs in Environmental Epidemiology provide students with basic skills in environmental exposure assessment and epidemiologic methods, in preparation for research or academic careers. The four-semester (80-credit) SM program is designed for individuals who hold a bachelor's degree and have strong quantitative skills.

Required courses include EPI 201a, *Introduction to Epidemiology*; EPI 202, *Elements of Epidemiologic Research*; EPI 203c, *Design of Case-Control and Cohort Studies*; EPI 204d, *Analysis of Case-Control and Cohort Studies*; EHE 215, *Environmental and Occupational Epidemiology*; EHE 268b, *Respiratory Epidemiology*; and BIO 210cd, *The Analysis of Rates and Proportions*. Students are encouraged to participate in research seminars within the Environmental Epidemiology program and affiliated groups.

Master of Science in Environmental Health (two-semester program)

Like the four-semester program, the two-semester (40-credit) SM program in Environmental Epidemiology provides students with basic skills in exposure assessment and epidemiologic methods, in preparation for research or academic careers. The required courses are the same as for the four-semester SM. The remainder of the schedule reflects areas of specific interest to the students. The two-semester program is open to applicants with a medical degree or a master's degree in a related scientific discipline. Students may enroll on a part-time basis, completing the program over two years.

Doctor of Science in Environmental Health

Applicants to the SD program in Environmental Epidemiology should have a master's degree in environmental health, epidemiology, or biostatistics, as well as strong quantitative skills. Doctoral students must fulfill the course requirements for a major in environmental health (20 credits) plus a minor in epidemiology (10 credits) and one other field (10 cred-

its). In addition, they must pass a written departmental comprehensive examination, pass the school-wide oral qualifying examination, and complete, defend, and submit a thesis. The thesis consists of several publishable papers reporting epidemiologic studies of environmental exposures.

Students interested in a research career are encouraged to apply to the doctoral program in Epidemiology with a minor in Environmental Health. Candidates for an SD in Epidemiology must meet all of the requirements of that department.

Doctoral students may receive financial support through research assistantships. Some financial support for doctoral students who are US citizens or permanent residents is available through NIH traineeships.

ENVIRONMENTAL SCIENCE AND ENGINEERING

The concentration in Environmental Science and Engineering emphasizes the chemical, physical, microbiological, engineering, and risk assessment aspects of environmental and occupational exposures. Concentration faculty measure and model ambient, indoor, and personal exposures to environmental and workplace contaminants; develop instruments and methods for collecting, analyzing, and assessing the effects of physical, chemical, and biological factors; conduct risk evaluations of new products, fuels, water supplies, technologies, and remediation strategies. Collaborative teaching and research is conducted in many countries, including Mexico, Chile, China, Russia, Slovakia, India, Korea, Taiwan, Japan, the Netherlands, and Germany.

Students in this concentration take the following core courses: EH 205ab, *Human Physiology*; EH 263cd, *Analytical Chemistry and Exposure Assessment*; EH 292a, *Air Pollution: Properties of Gases and Particles*; EHE 215c, *Air Pollution: Properties of Gases and Particles*; EHE 215, *Environmental and Occupational Epidemiology*; EHH 500a, *Risk Assessment*; EHH 502c, *Regulatory Toxicology*; BIO 201ab, *Introduction to Statistical Methods*; and EPI 201a, *Introduction to Epidemiology*.

Advanced courses in environmental science are oriented toward a specific pollutant or medium (such as air, surface water, or groundwater); they may focus on monitoring, modeling, or the control of the pollutants, or they may emphasize resources and occupational management, regulation, and policy. Most students also take courses at the John F. Kennedy School of Government and at MIT. Students specialize in one of the following areas of interest, each of which has additional course requirements.

Environmental Health Sciences This area is designed for those interested in identifying and characterizing human and ecological exposures to environmental contaminants. It provides training in air and water environments, environmental microbiology (both aquatic and aeroallergens), radiological health, hazardous and solid waste, exposure assessment, and pollution prevention. Graduates take positions in government agencies, such as the Environmental Protection Agency, in industry, and as consultants. Doctoral graduates also take positions in academia.

In addition to the general core requirements, areas of interest have specific course requirements plus 10 credits of related electives. Faculty members associated with the Environmental Science and Engineering concentration conduct large national and international research projects in air and water quality, exposure and risk assessment, and radiological health, providing research opportunities for both master's and doctoral students.

Doctoral students in Environmental Health Sciences are typically funded either fully or partially by the program through research assistantships or training grant fellowships.

Environmental Science and Risk Management This area is offered jointly by the Department of Environmental Health and the Department of Health Policy and Management. Providing students with an integrated education in environmental science, risk analysis, and decision making, this area is designed for students interested in pursuing professional and research careers in risk assessment and management in the private or public sector. The SM program

is directed toward the growing number of students interested in pursuing careers dedicated to solving problems at the interface between environmental science and public policy. The SD degree prepares students for either professional or research careers.

The curriculum includes course work in both the environmental sciences (for example, human physiology, risk assessment and regulatory toxicology, analytic chemistry and exposure assessment, and environmental and occupational epidemiology) and in the decision sciences (for example, decision, cost-effectiveness, and cost-benefit analysis, and environmental and resource economics). These core requirements are supplemented by required courses in biostatistics and electives in environmental policy, law, and management. Although a thesis is not required for the SM degree, each student is expected to complete a practicum in environmental risk and decision analysis.

Doctoral students in this area are typically either partially or fully funded through research assistantships or training grant fellowships.

Industrial Hygiene and Occupational Safety This area is designed for those interested in the anticipation, identification, evaluation, and control of occupational hazards. Graduates take positions at local and federal agencies, such as NIOSH, at private companies with occupational health programs, or at research institutions and universities investigating occupational hazards. Doctoral graduates often fill faculty posts at schools of public health.

Faculty research in Industrial Hygiene and Occupational Safety spans a variety of areas, including retrospective exposure assessment for epidemiologic studies of lung cancer risk from man-made vitreous fibers and of kidney cancer risk from aliphatic hydrocarbons; physiologic and behavioral determinants of exposure avoidance by arc welders; toxicokinetic modeling of exposure-dose relationships; and petroleum hydrocarbon exposures associated with adverse effects on reproductive function.

For more information about research and training in Environmental Health Sciences, please contact the Department of Environmental Health, 665 Huntington Avenue, Boston, MA 02115.

Claire M. Doerschuk, MD (Rush Medical College); Mark and Catherine Winkler Associate Professor of Physiology and Cell Biology. Transit of leukocytes through normal pulmonary microvasculature and the response of leukocytes to inflammatory stimuli within the lungs.

John S. Evans, SM (University of Michigan), SM, SD (Harvard University); Senior Lecturer on Environmental Science. Assessment of human exposures to pollutants; evaluation of uncertainty; application of decision analysis; assessment of health risk from waste disposal and energy production.

Timothy E. Ford, PhD (University of Wales, Bangor); Associate Professor of Environmental Microbiology. Surface, source, and drinking water microbiology; microbial cycling/transformation of pollutants; microbiologically influenced corrosion; groundwater-surface water interactions; aerosolization of microorganisms and microbial products.

Jeffrey J. Fredberg, SMME, ME, PhD (Massachusetts Institute of Technology); Professor of Bioengineering and Physiology; Associate Professor of Pediatrics, Harvard Medical School. Identification of the mechanical basis of airway and lung parenchymal function at the levels of organ, tissue, cell, and protein.

Beatriz S. González-Flecha, MS, PhD (University of Buenos Aires); Assistant Professor of Molecular Biology and Environmental Health. Biochemistry of oxygen free radicals; oxidative stress in biological systems; mechanisms of oxidative damage in eukaryotic and prokaryotic cells; intracellular sources of oxygen free radicals and adaptive responses to oxidative stress.

In addition to the general core requirements, areas of interest have specific course requirements. (Those participating in the internship program or specializing in hazardous waste are subject to slightly different requirements.)

Students in the four-semester program who have limited work experience are encouraged to take a three- or six-month internship between their first and second years of study. Interns work under the supervision of a professional industrial hygienist in a private company or research setting to evaluate occupational hazards and develop applied research skills.

Tuition support may be available through a NIOSH Education and Research Center Grant for highly qualified US citizens or permanent residents concentrating in Industrial Hygiene and Occupational Safety. Support for these students may also be obtained through fellowship programs offered by the Department of Energy or by the Oak Ridge Institute for Science and Education.

As described below, the Environmental Science and Engineering concentration offers both a four-semester and a two-semester Master of Science (SM) program in Environmental Health, as well as a program leading to the Doctor of Science (SD) degree. Please see page 9 for information about the Master of Public Health concentration in Occupational and Environmental Health.

Master of Science in Environmental Health (four-semester program)

Applicants to the four-semester (80-credit) SM program in Environmental Science and Engineering normally hold a bachelor's degree. For study in Environmental Health Sciences, the degree should be in engineering, chemistry, physics, biology, or mathematics; in Environmental Science and Risk Management, the preferred degree is in physical science, engineering, or the social and management sciences. Normally, students also have several years of work experience in the environmental field. For Industrial Hygiene and Occupational Safety, the degree should be in engineering, chemistry, physics, or quantitative or molecular biology. Applicants with other degrees

JEREMY SARNAT

Master's student, Department of Environmental Health

"The state of Israeli environmental health is that people really don't know what is going on," says Jer-

emy Sarnat, who has worked since 1993 in Israel as a staff scientist with the Israel Union for Environmental Defense in Tel Aviv.

One of Sarnat's goals, he notes, is to "introduce policies in Israel that help people see the link between health and environmental quality. The techniques taught at HSPH—such as monitoring and sampling for certain types of air contaminants—are the very methods that need to be introduced in Israel. I would also like to bring to Israel risk assessment procedures that are sensitive to the public's concerns, and understandable to everyone."

Turning Israel's attention to environmental health is a daunting challenge, Sarnat notes, since the country's priorities are currently defined by national security considerations. "But environmental health issues are also issues of national security. If you can't give your children a clean glass of water, that's a national safety problem too."

who have appropriate scientific and quantitative preparation may also be considered. Most applicants have relevant work experience. Admission decisions are based on academic records, standardized test scores, letters of recommendation, and prior experience.

Master of Science in Environmental Health (two-semester program)

Applicants with exceptional credentials may request consideration for admission to a two-semester (40-credit) SM program in Environmental Science and Engineering studying Environmental Health Sciences or Industrial Hygiene and Occupational Safety. Candidates for the former program normally have a bachelor's degree in engineering, chemistry, physics, biology, or mathematics, as well as an advanced degree or at least two years of work experience in the environmental field. The

two-semester Industrial Hygiene and Occupational Safety program is designed for practitioners with extensive experience who seek a professional credential; candidates may hold a master's or doctoral degree in engineering, chemistry, physics, quantitative or molecular biology, or a related field. Because entry into the two-semester program is based on the applicant's ability to waive several of the required courses listed in the concentration descriptions above, students' programs are designed individually.

Doctor of Science in Environmental Health

Applicants to the doctoral program in Environmental Science and Engineering studying Environmental Health Sciences normally have a master's degree in environmental science or a related field and strong scientific and quantitative skills. Those applying to study in Environmental Science and Risk Management normally have a master's degree plus two to three years of work experience. This area is designed for students interested in research in the related fields of environmental risk assessment and decision making. Industrial Hygiene and Occupational Safety applicants normally hold a master's (in rare cases, only a bachelor's) degree in engineering, chemistry, physics, or quantitative or molecular biology. Applicants are also expected to have relevant work experience.

Students undertake a comprehensive program in their specialty area, as outlined in the descriptions above, and must fulfill course requirements for one major (20 credits) and two minor (10 credits each) fields. Admission into the doctoral program in all areas of interest depends upon demonstrated competence in the requirements for one of the SM programs described above. Doctoral candidates must pass the departmental written examination and the school-wide oral qualifying examination; complete, defend, and submit a thesis; and serve as a teaching assistant for the equivalent of three 5-credit courses. During the course of their program, most doctoral students also take advantage of opportunities to present papers at scientific conferences.

OCCUPATIONAL HEALTH

This concentration is designed to train occupational safety and health professionals to recognize and prevent occupational injuries and disease. Concentration faculty carry out research spanning a wide range of occupational health problems, with the broad objective of identifying and contributing to the reduction or elimination of job-related health hazards. Areas of interest include respiratory disease among exposed populations, including auto workers, textile workers, agricultural workers, workers exposed to fuel-oil ash, and building occupants; reproductive and chronic disease studies of populations exposed to petrochemicals and heavy metals; biological and chemical hazards assessment; epidemiology of acute injury and cumulative trauma disorders; occupational and environmental cancers such as lung, skin, and bladder cancer; biomonitoring and medical surveillance; worker training; and occupational health research and training in developing countries. The concentration faculty have been in the forefront of the development of biochemical and molecular markers and their applications in epidemiologic studies of exposed populations.

The training programs in occupational safety and health are offered through the NIOSH-sponsored Education and Research Center for Occupational Safety and Health. As described below, the following programs are offered:

Master of Science (SM) and Doctor of Science (SD) in Environmental Health with a focus on Industrial Hygiene and Occupational Safety; MSN in Primary Health Care Nursing (from Simmons College) and SM in Environmental Health with a focus on Occupational Health Nursing (from Harvard University), both in cooperation with Simmons College; Master of Occupational Health (MOH); SM in Environmental Health with a focus on Occupational Safety and Health; and SD in Environmental Health with a concentration in Occupational Health, or Doctor of Public Health (DPH). Please see page 9 for information about the MPH concentration in Occupational and Environmental Health.

Joseph J. Harrington, AM, PhD (Harvard University); Professor of Environmental Health Engineering (Environmental Health and Population and International Health); Gordon McKay Professor of Environmental Engineering, Faculty of Arts and Sciences. Water resources planning and quality management; environmental monitoring and control systems; applied statistics for modeling; management for tropical disease control.

Russ B. Hauser, MD (Albert Einstein College of Medicine), MPH, SD (Harvard University); Assistant Professor of Occupational Medicine. Occupational lung diseases; environmental agents and allergic airways disease; male reproductive epidemiology.

Robert F. Herrick, MS (University of Michigan), SD (Harvard University); Lecturer on Industrial Hygiene. Exposure-reactive aerosols; characterization of complex exposures; interaction of individuals with a source of exposure.

Howard Hu, MD (Albert Einstein College of Medicine), MPH, SM, SD (Harvard University); Associate Professor of Occupational Medicine. Epidemiology of chronic lead toxicity using biomarkers of bone lead accumulation and genetic susceptibility.

Karl T. Kelsey, MD (University of Minnesota), MOH (Harvard University); Professor of Environmental Health and Cancer Biology. Occupational and environmental carcinogenesis, with emphasis on the study of workplace mutagen and carcinogen exposure, using epidemiological application of cytogenetic and molecular endpoints.

Petros Koutrakis, MS, PhD (University of Paris); Professor of Environmental Sciences. Sampling and analysis of air pollutants; atmospheric, indoor air, and aerosol chemistry; application of multivariate techniques to source apportionment; acid rain; urban air pollution.

Donald K. Milton, MD (Johns Hopkins University), MPH, DPH (Harvard University); Associate Professor of Occupational and Environmental Health. Measurement of airborne endotoxin; epidemiology of acute and chronic responses to bioaerosol exposure.

For more information about research and training in Occupational Health Nursing, please contact Susan Legendre, Occupational Health Program, 665 Huntington Avenue, Boston, MA 02115.

Phone: 617-432-3327

Fax: 617-432-0219

E-mail: legendre@hohp.harvard.edu

Richard R. Monson, MD, SM, SD (Harvard University); Professor of Epidemiology (Environmental Health and Epidemiology). Relationship between the workplace, the environment, and disease.

Joseph D. Paulauskis, MS, PhD (Miami University); Associate Professor of Molecular Biology. Molecular/biochemical mechanisms of toxicity for environmentally relevant contaminants; gene regulation during pulmonary inflammation.

Lorenz R. Rhomberg, PhD (State University of New York at Stony Brook); Assistant Professor of Risk Assessment (Health Policy and Management and Environmental Health). Critical analysis of the methods and procedures of human risk assessment, especially quantitative methods for putative carcinogens.

Stephen N. Rudnick, MS (University of Pennsylvania), **SM, SD** (Harvard University); Lecturer on Industrial Hygiene Engineering. Engineering control of particulate air contaminants in indoor and occupational settings and engineering control systems; sampling and analysis of air contaminants.

Joel D. Schwartz, PhD (Brandeis University); Associate Professor of Environmental Health. Environmental epidemiology; natural history of lung function and disease; cost-benefit analysis; nonclassical time series analysis; nonparametric smoothing and graphical methods in epidemiology.

Jacob Shapiro, SM (Brown University), **PhD** (University of Rochester); Lecturer on Biophysics in Environmental Health. Occupational and environmental radiation protection; low-level radioactive waste disposal; radiation dosimetry and protection standards; environmental radiation surveillance.

Master of Science/Doctor of Science in Environmental Health

Industrial Hygiene and Occupational Safety is designed for those interested in the anticipation, identification, evaluation, and control of occupational hazards. Admissions and curriculum are administered through the department's Environmental Science and Engineering Program, described on page 26.

Master of Science in Primary Health Care Nursing (one-year program)

This program is offered by the Educational Resource Center and Simmons College, which awards the degree. It is designed for registered nurses who are seeking preparation as occupational health nurse practitioners.

Participants undertake practica in industrial settings, clinics, and hospital-based occupational health programs and complete the following courses, taught at Simmons College: NUR 404, *Normal and Abnormal Human Physiology*; NUR 406, 407, 408, *Research Methods I, II, III*; NUR 480, 482, *Theory and Practice: Primary Health Care Nursing I, II*; NUR 481, *Theoretical Foundations for Nursing Practice*; NUR 422, *Clinical Pharmacology for Nurses in Ambulatory Care*; NUR 485, 486, *Health in the Workplace I, II*; GSHS 900, *Introduction to Health Care Systems*; NUR 470, *Health Promotion in Primary Care Nursing*; and EH 231cd, *Occupational Health Policy and Administration*.

Applicants must have at least a bachelor's degree in nursing from a program accredited by the National League of Nursing, must show satisfactory completion of basic statistics and physical assessment courses, and must be registered to practice nursing in a US state or territory. Tuition support may be available for US citizens or permanent residents through NIOSH traineeships or other traineeships or scholarships.

Four-Semester, Dual-Degree Master of Science in Environmental Health (HSPH) and Primary Health Care Nursing (Simmons College)

The dual-degree program in Occupational Health Nursing is also aimed at preparing

nurses for positions as occupational health nurse practitioners. It emphasizes identification of health hazards, workplace assessment, program planning and intervention, worker health promotion, and disease and injury prevention. The program integrates curricula from HSPH and Simmons College, with courses taken concurrently at both institutions. Nurses interested in this program must apply to and be accepted by both schools.

Students in the dual degree program fulfill essentially the same course requirements at Simmons College as those enrolled in the one-year MSN program. In addition, they must take the following HSPH courses: EH 243ab, *Ergonomics/Human Factors*; EH 262ab, *Introduction to Occupational Hygiene*; EH 241cd, *Occupational Safety*; ID 263cd, *Practice of Occupational Health*; BIO 200, *Principles of Biostatistics*; EPI 200, *Principles of Epidemiology*; EH 231cd, *Occupational Health Policy and Administration*; EHE 215, *Environmental and Occupational Epidemiology*; EH300b, *Tutorial in Toxicology*; and two electives. Students must also complete an independent study project.

Applicants must have at least a bachelor's degree in nursing from a program accredited by the National League of Nursing, must show satisfactory completion of a basic statistics course, and must be registered to practice nursing in a US state or territory. Tuition support may be available for US citizens or permanent residents through NIOSH traineeships or other traineeships or scholarships.

Master of Occupational Health

This two-semester (40-credit) program is designed to train physicians in the public health disciplines relevant to the prevention and control of occupational disease and injury. Physicians interested in occupational and environmental medicine may apply either to the MOH program or to the Occupational and Environmental Health concentration of the Master of Public Health (MPH) program (see page 9). Either the MOH or the MPH is taken as the first year of a two-year Occupational and Environmental Medicine Residency (see next page).

Occupational and Environmental Medicine Residency

This residency emphasizes the development of skills in clinical occupational medicine and occupational epidemiology. During this year, acquired knowledge and abilities are applied to patient management and workplace problem solving, and at least one short-term research project is designed, executed, and documented under faculty supervision. Field experience includes rotations through hospital-based occupational health clinics, the Massachusetts Division of Occupational Hygiene, and corporate medical departments. The residency is fully accredited by the Accreditation Council for Graduate Medical Education.

Applicants must be graduates of an approved school of medicine and must have completed at least one year of clinical training in internal medicine or family practice; board eligibility or certification in a primary care specialty is preferred. Physicians currently holding positions in the field of occupational safety and health who plan to return to these positions are considered particularly strong candidates for admission. In addition to submitting an application to the de-

gree program, prospective residents should send a letter of interest to the Occupational Health Program, enclosing a curriculum vitae listing medical training and experience, research experience, and publications. Admission to the practicum year of the residency is a separate process from, and usually occurs shortly after, admission to the degree program. Applicants who require early notification of admission to the residency program should indicate this in a cover letter accompanying the application form. Applications for the degree program are reviewed and approved beginning in September for admission in September of the following year. Continuation into the second year of the residency is contingent upon having had adequate prior clinical experience and exemplary performance in the didactic phase of the program.

Some financial support for residency candidates who are US citizens or permanent residents may be available through traineeships or National Research Service Awards.

Core course requirements for the MOH (or the MPH) are as follows: BIO 200, *Principles of Biostatistics*; EH 243ab, *Ergonomics/Human Factors*, or EH 241cd, *Occupational Safety*; EH 262ab, *Introduction to Occupational Hygiene*; EPI 200, *Principles of Epidemiology*; HSB 201a, *Society and Health* (or alternate); CCB 204ab, *Principles of Toxicology*; EH 231cd, *Occupational Health Policy and Administration*; EH 232cd, *Introduction to Occupational and Environmental Medicine*; EHE 215, *Environmental and Occupational Epidemiology*; and ID 263cd, *Practice of Occupational Health*. Recommended electives include either BIO 210cd, *The Analysis of Rates and Proportions*, or BIO 211cd, *Regression and Analysis of Variance in Experimental Research*. MOH students may also choose to take ID 250, *Ethical Basis of the Practice of Public Health*, which is required by the MPH program. Also recommended is MIT course 10.805J, *Technology, Law, and the Working Environment*.

Master of Science in Environmental Health

Occupational Safety and Health emphasizes the epidemiologic and biostatistical aspects of this field. The program is normally completed over four semesters, although an individual with a PhD or JD may be admitted to a two-semester program. It is generally expected that students without a prior doctoral degree will wish to enroll in a subsequent doctoral program.

Applicants normally have a bachelor's degree and advanced training in science, including college-level organic and inorganic chemistry. Those currently holding positions in the field of occupational safety and health who plan to return to these positions are considered particularly strong candidates for admission. Some financial support may be available for US citizens or permanent residents through traineeships or National Research Service Awards.

For more information about the Master of Occupational Health program, or research and training in Occupational Safety and Health, please contact David C. Christiani, SM, MD, MPH, Department of Environmental Health, 665 Huntington Avenue, Boston, MA 02115.

kenworthy@cylab.harvard.edu

Frank E. Speizer, MD (Stanford University); Professor of Environmental Science; Professor of Medicine, Harvard Medical School. Environmental epidemiology; pulmonary diseases; cancer and nutrition; health effects of air pollution; occupational and environmental medicine.

John D. Spengler, PhD (State University of New York at Albany), SM (Harvard University); Professor of Environmental Health. Assessment of human exposures to environmental contaminants; application of advanced particle analysis techniques to identify source contributions to indoor and ambient aerosols; building-related illnesses.

Helen H. Suh, SM, SD (Harvard University); Assistant Professor of Environmental Chemistry and Exposure Assessment. Multimedia exposure assessment; exposure modeling; ambient and indoor air pollution; study design.

Doctor of Science in Environmental Health/Doctor of Public Health

An SD or DPH degree may be earned by students who wish to concentrate in Occupational Health. Students fulfill course requirements in one major (20 credits) and two minor fields (10 credits each). In addition, they must pass a written departmental comprehensive examination, pass the school-wide oral qualifying examination, and complete, defend, and submit a thesis.

PHYSIOLOGY

The concentration in Physiology focuses on normal and pathological functions of organisms. It centers on the respiratory system because the system presents an immense, thin surface area to the environment, and thus is an important route of entry to the body as well as a site of damage from toxins and infections. Areas of study include mediators and adhesion molecules involved in inflammation; the effects of inhaled particles; lung infections; biomechanics of cells and tissue in normal and inflamed lungs; smooth muscle function in asthma; control of breathing; sleep-related breathing disorders; mechanisms of dyspnea and respiratory sensations; cardiovascular pathobiology; and epithelial cell, macrophage, lymphocyte, and neutrophil lung biology. The biology is broadly based, ranging from molecular and cell biology to integrated organismic, environmental, and comparative physiology.

The Physiology concentration integrates a range of scientific disciplines, including physics, bioengineering, physiology, biomathematics, cell biology, molecular biology, clinical science, and epidemiology. By working within this rich interdisciplinary environment, students learn many measurement technologies, discover a variety of disciplinary approaches, and develop mature scientific thinking. Special facilities are available, including a confocal microscope, analytical electron microscopes, a flow cytometer, a sleep laboratory, and a sensation laboratory.

As described below, the concentration leads to the Doctor of Philosophy (PhD) degree, offered through the Biological Sciences in Public

Health Program (a component of the Division of Medical Sciences, Graduate School of Arts and Sciences). Applicants may prefer to follow a different curriculum leading to the Doctor of Science (SD) degree; this option is available by special arrangement with the department.

Doctor of Philosophy in Biological Sciences in Public Health (BPH)(Physiology)

Students wishing to study cellular and molecular biology or physiology as they pertain to major problems in public health may apply to the Biological Sciences in Public Health program. This program offers the PhD degree through Harvard University's Graduate School of Arts and Sciences, Division of Medical Sciences, Committee on Biological Sciences in Public Health.

The program is designed to prepare students for research careers in respiratory physiology, cell and molecular biology, or bioengineering. It offers a firm foundation in the basic biomedical sciences, as well as in epidemiology and biostatistics. Specific courses supplement this core, as dictated by individual research concentrations. Students in this program engage in laboratory rotations in three different research areas to enable them to assess realistically their interests in a thesis project and to evaluate the suitability of the laboratory and the mentor. At the completion of these rotations, students select an area of concentration and a thesis research laboratory and complete the required curriculum. A qualifying examination must be passed before engaging in thesis work, and the thesis must be defended before the granting of the PhD. Some students also participate in the Master of Biomedical Science program, which is designed to offer PhD students a greater knowledge of human biology and disease.

Applicants generally have a bachelor's degree and demonstrated competence in organic and biological chemistry, general biology, physics, and calculus. Those deficient in one of these areas may be admitted provisionally on the condition that appropriate courses will be taken before and/or after entering the program. Ap-

Additional Areas of Interest

The Department of Environmental Health offers these areas of interest to provide additional, in-depth research and training opportunities.

Environmental Molecular Epidemiology

This area is for those students interested in the application of molecular methods to environmental epidemiologic studies for the measurement of exposure, disease susceptibility, or disease outcome. This area of interest has a curriculum based in occupational and environmental health and augmented by the study of biomarkers, epidemiologic methods, physiology, exposure assessment, and molecular biology.

Occupational Epidemiology

Students who are interested in the epidemiology of occupational disease and injury may elect to pursue training in this area by applying themselves to a curriculum that includes courses in epidemiology, exposure assessment, occupational health, biostatistics, and toxicology. This area has an emphasis on the application of biomarkers to occupational health and in statistical modeling of exposure-response relationships.

Occupational Ergonomics and Safety

This specialty area links the engineering approach to occupational hazard control with the public health approach to occupational injury and illness prevention. The curriculum prepares graduates to identify and evaluate ergonomic and safety risks in the workplace; identify and evaluate the occurrence of work-related musculoskeletal injury and illness; develop administrative and engineering controls in the design of equipment, work tasks, and workplaces; and develop and evaluate policies and programs for the prevention of musculoskeletal injuries and illnesses.

Population Genetics

This is a multidisciplinary field, integrating aspects of genetics, epidemiology, statistics, biology, and medicine. Complex diseases such as asthma, cancer, diabetes, hypertension, neuro-

logical disorders, and coronary heart disease are considered, utilizing genetic data from human populations and families.

Students who pursue this area of interest participate in broad-based, comprehensive research which includes gene-mapping to identify the genetic loci and variants responsible for the genetic contribution to complex disease; studies of gene-environmental interaction to investigate the relative contributions of genetic and environmental factors in disease manifestation; mutation and allele frequency studies to investigate the distribution of disease-predisposing factors in the population at large; gene assessment to investigate the role of a particular (candidate) gene in disease pathogenesis; and clinical trials to confirm pharmacological intervention and public health prevention.

Water Pollution

Students seeking in-depth training in water quality issues, including transmission of waterborne disease, toxicological concerns, and water and wastewater treatment strategies, may want to consider this area of interest. Faculty research interests include survival and proliferation of pathogens in drinking water, microbial interactions with pollutants, pollutant fate and transport in aquatic ecosystems, and toxicity of disinfection by-products. International issues, especially those of developing countries, are emphasized. The recommended curriculum includes courses at HSPH, MIT, and in Harvard's Faculty of Arts and Sciences and Kennedy School of Government.

Interdisciplinary Program in Infectious Disease

Education and research on infectious disease are available through the Interdisciplinary Program in Infectious Disease. Students in this program fulfill the departmental requirements for doctoral students with additional coursework in biology, quantitative methods, and infectious disease. For more information on this program, see page 5.

For more information about research and training in Environmental Molecular Epidemiology, please contact Karl T. Kelsey, MD, MOH, Department of Environmental Health, 665 Huntington Avenue, Boston, MA 02115.

Phone: 617-432-3313

Fax: 617-432-0219

E-mail: kelsey@hohp.harvard.edu

For more information about research and training in Occupational Epidemiology, please contact David Christiani SM, MD, MPH, Department of Environmental Health, 665 Huntington Avenue, Boston, MA 02115.

Phone: 617-432-1260

Fax: 617-432-0219

E-mail: dchris@hohp.harvard.edu

For more information about research and training in Occupational Ergonomics and Safety, please contact Robert F. Herrick, MS, SD, Department of Environmental Health, 665 Huntington Avenue, Boston, MA 02115.

Phone: 617-432-0674

For more information about research and training in Population Genetics, please contact Xiping Xu, MD, PhD, SM, Department of Environmental Health, 665 Huntington Avenue, Boston, MA 02115.

Phone: 617-432-1959

Fax: 617-432-2956

For more information about research and training in Water Pollution, please contact Timothy E. Ford, PhD, Department of Environmental Health, 665 Huntington Avenue, Boston, MA 02115.

Phone: 617-432-3434

Ning Wang, MS (Huazhong University of Science and Technology), SD (Harvard University); Assistant Professor of Physiology and Cell Biology. Cytoskeletal mechanics; mechanochemical signal transduction; cell adhesion and migration; cancer metastasis; effects of mechanical forces on cells.

Xiping Xu, MD (Anhui Medical University, China), PhD (University of Tsukuba, Japan), SM (Harvard University); Associate Professor of Occupational Epidemiology; Associate Professor of Medicine, Harvard Medical School. Environmental, occupational, and genetic epidemiology of respiratory, cardiovascular, and metabolic diseases.

The following faculty members have secondary appointments at HSPH. Their primary affiliation is with Harvard Medical School.

Robert B. Banzett, PhD (University of California, Davis); Associate Professor in the Department of Environmental Health. Respiratory neurophysiology and mechanics; perceived sensation; control; interaction with locomotion; fluid dynamics in the avian lung.

Harold A. Chapman, Jr., MD (University of Alabama); Associate Professor in the Department of Environmental Health. Pathophysiology of chronic inflammatory reactions in the lung; biology of proteases and antiproteases; role of coagulation and fibrinolysis in the pathogenesis of acute lung injury.

Jeffrey M. Drazen, MD (Harvard University); Professor in the Department of Environmental Health. Pulmonary and respiratory pharmacology; mediators of immediate hypersensitivity; mucus regulation and expression in chronic bronchitis.

John J. Godleski, MD (University of Pittsburgh); Associate Professor in the Department of Environmental Health. Experimental models of normal and pathologic responses to inhaled particles.

Diane R. Gold, MD (University of Connecticut), DTM&H (University of Liverpool), MPH (Harvard University); Assistant Professor in the Department of Environmental Health. Acute lower respiratory illness in childhood as a predictor of lung function and chronic respiratory symptoms; the relationship between indoor/outdoor air pollution and childhood respiratory morbidity.

plicants must take both the GRE general and subject tests by October in order to meet the application deadline of December 15.

Most students admitted to the program receive a stipend and tuition support. Students are encouraged to apply for fellowships from outside sources since certain external fellowships provide higher stipends. While funds to support international students are limited, one special scholarship is available each year for a student from a developing, subSaharan African country. There is also a university-wide fellowship program that provides funding to qualified underrepresented minority students in the sciences.

Graduates ordinarily assume positions as faculty members and research scientists at medical schools, research institutes, and schools of public health. Career opportunities in the biological sciences as they apply to public health are expected to grow both in academia and in the biotechnology and pharmaceutical industries.

Courses Offered by the Department of Environmental Health, 1998-99

Please note that this list may be incomplete and is subject to change. Detailed course listings, including information about prerequisites, course activities, and scheduling, are distributed to students with registration information.

Letters following course numbers indicate the period(s) in which a course is given: a and b (fall quarters); c and d (spring quarters); e and f (one-week sessions in January and March); s and t (1999 summer sessions).

EH 201b. Introduction to Environmental Health (Brain)

Analyzes health problems stemming from contamination of air, water, food, the workplace, and other special environments. Examines policy required for regulation and strategies for prevention and control. (2.5 credits)

EH 202d. Principles of Environmental Health (Monson)

Focuses on the assessment of risk to health from environmental exposures, the use of such data in policy development and environmental management, and legal strategies for redressing environmental injury and controlling environmental degradation. (2.5 credits)

EH 205ab. Human Physiology (Banzett)

Introduces the function of the human organism. Emphasizes the concept of homeostasis and on integrative aspects of physiology. Includes some pathophysiology. (5 credits)

EHE 215. Environmental and Occupational Epidemiology

EHE 215cd. (Dockery, Hauser)

EHE 215t. (Dockery, Hauser)

Reviews methods used to evaluate the health effects of physical and chemical agents in the environment and available evidence on the health effects of such exposures. Presents policy questions raised by the scientific evidence. Topics include methodology, the review and criticism of current literature, and the evaluation and impact of epidemiologic data. (2.5 credits)

EH 223ab. Advanced Respiratory Physiology (Butler)

Covers lung structure, volume and flow mechanics, surfactant function, gas exchange, and lung and chest-wall interaction. Presents classic concepts and recent advances. (5 credits)

EH 225cd. Advanced Topics in Physiology (Fredberg, Paulauskis)

Allows students to focus on special topics in lung biology. The topic for 1998-99 is the physical basis and quantitative description of chemical, electrical, and mechanical signaling within the cell. (5 credits)

EH 231cd. Occupational Health Policy and Administration (Monson, Langer)

Examines legal, economic, and political foundations of occupational health activities in the US. Discusses roles of government, unions, research organizations, and corporations. (2.5 credits)

EH 232cd. Introduction to Occupational and Environmental Medicine (Hu, Christiani)

Reviews diagnosis following exposure to specific workplace substances, including asbestos, lead, and organic solvents. Presents techniques for assessing disability. (2.5 credits)

EHE 235ab. Scientific Basis of Occupational Health Regulations (Eisen, Wegman)

Reviews the scientific basis for the association of occupational exposures and disease. Emphasizes the evaluation of epidemiologic literature, the interface of science and regulatory policy, and the role of risk analysis in setting health standards. (5 credits)

EH 241cd. Occupational Safety (Mangone, Smith)

Covers principles of occupational safety, including safety regulation and standards, models of accident causation, investigation procedures, and techniques for accident control. (2.5 credits)

EH 243ab. Ergonomics/Human Factors (Herrick, Courtney, Ciriello)

Emphasizes the design of the job to fit the worker. Investigates specific problems resulting from the nature of the job itself and considers the physiological, biomedical, psychological, and anatomical characteristics of the worker in the development of good job design principles. (2.5 credits)

EH 250cd. Protecting Workers from Hazardous Substances (Rudnick, Martin, Walters)

Covers the recognition, evaluation, and control of workers' exposure to chemical and physical agents during remediation of hazardous sites, emergency response activities, and related operations. (2.5 credits)

EH 253cd. Ventilation and Indoor Air Quality (Rudnick, Spengler, DiBerardinis)

Covers industrial ventilation to control workers' exposure to airborne contaminants, HVAC systems, and indoor environmental quality assessment of buildings and residences. (5 credits) Offered 1998–99 and alternate years.

EH 254cd. Evaluation and Control of Noise and Vibration (Rudnick)

Covers the fundamentals, principles, evaluation, and control of noise and vibration. (2.5 credits) Not offered 1998–99.

EH 256cd. Introduction to Aerobiology (Burge, Milton, Muilenberg)

Emphasizes the microbiology of the air, including the nature of organisms producing aerosols, the nature of aerosols and the dynamics of aerosol populations, and exposure assessment issues. (2.5 credits)

EH 257cd. Water Pollution (Ford, Shine, Mitchell)

Presents the basic principles of water pollution and related issues on local, regional, and global scales. Discusses the chemical, physical, and biological properties of water and contaminants in ground, surface, brackish, and marine waters. (5 credits)

EH 262ab. Introduction to Occupational Hygiene (Smith)

Covers key aspects of industrial hygiene, including recognition, evaluation, and control of health hazards at work. Considers chemical, physical, and biological hazards, and the criteria for each. Includes one or more workplace visits. (2.5 credits)

EH 263cd. Analytical Chemistry and Exposure Assessment (Yanagisawa, Shine, Suh)

Emphasizes first water and then air, requiring students to design and implement field investigations to assess human exposures to environmental pollutants in occupational or community settings. (5 credits)

EH 264cd. Water Environment (J. Harrington)

Provides students with an understanding of water engineering principles, emphasizing design and treatment of water supply systems in developing and developed countries. (2.5 credits)

EH 266cd. Land Environment and Waste Management (First)

Focuses on the nature, sources, and amounts of municipal, industrial, and hazardous wastes; laws governing storage, environmental control, transport, and disposal; waste management, minimization, elimination, recycling, and intermedia transfers—ground to water and ground to air. (2.5 credits) Offered 1998–99 and alternate years.

EH 267cd. Industrial Hygiene Internship and Environmental Sciences Research (Herrick, Koutrakis)

Refines communication skills of students who have participated in the Industrial Hygiene Internship (EH 273ab). (2.5 credits)

EHE 268b. Respiratory Epidemiology (Dockery)

Reviews the epidemiology of chronic respiratory diseases; presents demographic distribution time trends, and risk factors. (1.25 credits)

EH 269cd. Exposure Assessment for Environmental and Occupational Epidemiology (Smith, Suh)

Reviews methods used to characterize environmental and occupational exposures. Introduces approaches for biologically based exposure assessment matched to epidemiologic designs. (2.5 credits) Not offered 1998–99.

EH 270cd. Principles of Pollution Prevention (Pojasek, Spengler)

Students work in groups to learn to apply creative problem-solving techniques to the prevention of pollution. Students learn how to prepare a process map and use it as a template for tracking material use and loss. (5 credits)

EEB 271c. Advanced Regression Techniques for Environmental Epidemiology (Schwartz, P. B. Ryan)

Covers nonlinear exposure-response relationships and repeated measure designs, including smoothing techniques, generalized additive models, robust regression, and time series models. Students use data sets to model effects of exposures on health outcomes. (2.5 credits)

EH 273ab. Industrial Hygiene Internship (Herrick)

Places students in an industrial or similar workplace under the direction of an experienced industrial hygienist to learn evaluation techniques and to study a specific hazard or problem. (20 credits)

EHB 277ab. Modern Genetic Epidemiology and Gene Mapping (Xu, Schork, Laird, Haines)

Introduces statistical methods in genetic epidemiology and gene mapping techniques. Topics include heritability estimation, segregation analysis, linkage disequilibrium analysis, and issues in population genetics. (2.5 credits) Not offered 1998–99.

Rose H. Goldman, MD (Yale University), MPH, SM (Harvard University); Assistant Professor in the Department of Environmental Health. Occupational health in the biotechnology industry; metal poisoning; neurotoxicity; cumulative trauma injuries.

Stefanos N. Kales, MD, MPH (Harvard University); Assistant Professor in the Department of Environmental Health. Occupational/environmental lung disease; occupational/environmental toxicology.

Lester Kobzik, MD (Tufts University); Associate Professor in the Department of Environmental Health. Lung macrophage phagocytosis and response to inhaled particles; pulmonary inflammation and pathology.

Stephen H. Loring, BMS (Dartmouth Medical School), MD (Harvard University); Associate Professor in the Department of Environmental Health. Chest wall mechanics, hyperinflation, and lung transplantation; mechanics and physiology of respiratory muscles and the pleural space.

Steven A. Shea, PhD (London University); Assistant Professor in the Department of Environmental Health. Control of breathing, respiratory sensations, and sleep physiology in humans.

Richard Verrier, PhD (University of Virginia); Associate Professor in the Department of Environmental Health. Neural triggers of sudden cardiac death; cardiac electrophysiology; T-wave alternans; coronary hemodynamic function; novel delivery systems for antiarrhythmic therapy.

Angeline E. Warner, MS (University of Miami), DVM (University of Florida), SD (Harvard University); Assistant Professor in the Department of Environmental Health. The role of mononuclear cells, specifically pulmonary intravascular macrophages in inflammatory lung injury and the adult respiratory distress syndrome.

Scott T. Weiss, MD (Case Western Reserve School of Medicine), SM (Harvard University); Professor in the Department of Environmental Health. Natural history of chronic lung disease; epidemiology of asthma and hypertension; cardiovascular, occupational, environmental, and genetic epidemiology; the effect of aging on pulmonary function.

Adjunct Faculty

Ellen A. Eisen, SM, SM, SD; Professor of Work Environment, University of Massachusetts, Lowell.

Alan Eschenroeder, BME, PhD; private consultant.

Jouni J.K. Jaakkola, DSc, PhD; Lecturer, Helsinki University of Technology and University of Helsinki.

Lucas M. Neas, MSE, SD; Health Scientist, US Environmental Protection Agency.

Robert B. Pojasek, PhD; Senior Scientist and Senior Program Manager, Cambridge Environmental, Inc.

P. Barry Ryan, SM, PhD; Professor of Environmental Health, Emory University.

Peter A. Valberg, AM, SM, PhD; Cambridge Environmental, Inc.

David H. Wegman, MD, SM; Professor and Chair, Department of Work Environment, University of Massachusetts, Lowell.

Yukio Yanagisawa, MEng, DEng; Professor, Tokyo University, and Chief Researcher, Research Institute for Innovative Technology on Earth.

EH 278ab. Human Health and Global Environmental Change (Hu, Chivian, P. Epstein)

Provides an overview of the basic physics, chemistry, and biology of global environmental change, and of the potential consequences of these changes for human health. Topics include climate change, stratospheric ozone depletion, effects of toxic substance pollution on global ecosystems, the degradation of terrestrial and marine environments, and the loss of species and biodiversity. (5 credits)

EH279cd. The Radiation Environment: Its Identification, Evaluation and Control (Aro, Shapiro)

Introduces the physics, mathematical analysis, and control of radiation fields, before addressing topics such as radiotherapy, medical imaging, occupational and environmental radiation protection, and use of radiation as an analytical tool. (2.5 credits)

EHE 280cd. Biomarkers in Occupational and Environmental Health (Kelsey, Christiani)

Covers the use of biomarkers as measures of exposure, absorbed dose, biological effect, and health outcome in acute and chronic disease states. (2.5 credits) Offered 1998-99 and alternate years.

EH 290. Research in Physiology (Fredberg, Brain, Godleski)

Focuses on the design, conduct, and analysis of research in physiology. Includes laboratory experience and the acquisition of original data and culminates in the presentation of a research project at a national meeting and in the preparation of a paper suitable for publication. (2.5 credits)

EH 292a. Air Pollution: Properties of Gases and Particles (Koutrakis, Rudnick)

Covers the laws of ideal and real gases, gas properties, and application of aerosol properties to particles sampling, sizing, and collection. Topics include particle formation and deposition mechanisms, respiratory sampling, and instrumentation for sizing and measuring airborne particles in the atmosphere. (2.5 credits)

EH 293b. Air Pollution: Atmospheric Processes (Koutrakis, Spengler)

Provides an understanding of air pollution meteorology, including the physical and mathematical descriptions of global, synoptic, and mesoscale circulation patterns. Presents concepts of heat, momentum, and material transfer in the lower atmosphere. (2.5 credits)

EH 295d. Air Pollution: Energy and Thermodynamics (Yanagisawa, Jahng)

Employs thermodynamics theory to organize understanding of kinetics, chemical reactions, and equilibrium of air pollutants as taught in previous air pollution courses. Topics include the first and second laws of thermodynamics, chemical potential, and equilibrium. (2.5 credits)

EHH 500a. Risk Assessment (Evans, Hammitt)

Introduces the framework of risk assessment, considers its relationship with cost-benefit, decision analysis and other tools for improving environmental decisions. Discusses epidemiology, toxicology, and exposure assessment as the foundations for risk assessment. Introduces mathematical sciences used to develop models of dose-response, fate and transport, and the statistical aspects of parameter estimation and uncertainty analysis. (2.5 credits)

EHH 501b. Environmental Pollution: Exposure Modeling (Evans, Eschenroeder)

Presents approaches for estimating human exposure to environmental pollution in situations where measurements are unavailable or uninformative. Focuses on models of the fate and transport of pollutants in air, water, and soil, and considers the major routes of uptake: inhalation, ingestion, and dermal uptake. (2.5 credits)

EHH 502c. Regulatory Toxicology (Rhombert, Milton)

Covers basic principles of toxicology and ways animal and human studies are used to further the understanding of dose-response relationships. Presents the toxicological evidence for regulating chemicals in the environment and food supply, and quantitative pharmacokinetic and dose-response models used in risk assessment. (2.5 credits)

EHH 503ab. Environmental Science and Risk Management Practicum (Evans)

The practicum is designed to allow ESRM students to integrate what they have learned about risk and decision sciences and to apply this knowledge in the evaluation of a problem in environmental management or policy. Students design and conduct an independent analysis of an environmental policy problem, demonstrating analytical sophistication and critical interpretation of relevant science in support of decision making. The practicum is a requirement for all students in the ESRM masters and doctoral program. (5 credits) Not offered 1998-99.

Independent Study, Field Experience

Individual students or small groups of students who wish to go beyond the content of regularly scheduled courses may arrange with individual faculty members to participate in departmental research or to undertake specialized readings or studies in the following areas: aerosol technology, air pollution control, environmental health management, environmental epidemiology, environmental microbiology, industrial hygiene and ventilation, nuclear medicine, occupational medicine, radiological health, respiratory biology, respiratory epidemiology, and solid waste management. Supervised site visits and field research projects are available in medical, industrial hygiene, and environmental health departments of industries and governmental agencies.

DEPARTMENT OF EPIDEMIOLOGY

The Department of Epidemiology has a long tradition of teaching and research in the epidemiology of cancer, cardiovascular disease, and other chronic diseases, as well as in epidemiologic methodology. Current research in the department includes the role of viruses in the etiology of cancer; the connection between diet and risk of cancer, cardiovascular disease, and other major chronic diseases; the relationship between exposure to chemicals in the workplace and the development of cancer; factors in early life predisposing individuals to chronic diseases; case identification and risk factors in mental disorders; health effects of drugs, vaccines, and medical devices; and causes of human infertility.

Recent graduates have become members of the faculties of major universities, medical schools, and research institutes. They also serve as epidemiologists for the National Cancer Institute, Centers for Disease Control and Prevention, other domestic and international governmental institutions, as well as in private industry.

The department offers both a two-semester and a four-semester Master of Science (SM) program, as well as a Doctor of Science (SD) and a Doctor of Public Health (DPH) program. Students pursuing these degrees choose among the following areas of interest.

Cancer Epidemiology In addition to research methodology, the curriculum in this area includes courses on the biology and genetics of cancer; the basic concepts and issues of cancer epidemiology; the roles of diet, oncogenic viruses, and occupational exposures in the etiology of cancer; the prevention of cancer; and research methods. Research opportunities for students include a large number of ongoing cohort and case-control studies within the department and in conjunction with the Dana-Farber/Harvard Comprehensive Cancer Center. Financial support may be available for US citizens or permanent residents enrolled in a doctoral degree program or postdoctoral fellowship program in cancer epidemiology.

Epidemiology is the study of the frequency, distribution, and determinants of disease in humans, and is one of the fundamental sciences of public health. While individual epidemiologists have different study objectives and use different approaches, the aims of epidemiologic research ultimately lie in the prevention or effective control of human disease.

Cancer Prevention This area provides students with a knowledge of the science of cancer prevention, expertise in a specialized research area, skill in policy analysis, and an introduction to professional networks through which they will be able to update continuously their knowledge of this evolving field. Social and behavioral scientists enrolled in the program prepare themselves to advance knowledge of the efficiency and effectiveness of alternative strategies for inducing behavioral change at the individual, institutional, community, or policy levels. Physicians prepare themselves for careers as clinical investigators or public health practitioners specializing in cancer prevention. The program combines the interdisciplinary resources of the Harvard Center for Cancer Prevention and of

the Division of Cancer Epidemiology and Control in the Dana-Farber Cancer Institute.

Financial support may be available through the National Cancer Institute for doctoral students and postdoctoral fellows and for physicians engaged in postdoctoral training. Candidates for financial support must be US citizens or permanent residents.

Cardiovascular Epidemiology This area provides training in research methodology and the epidemiology of cardiovascular diseases. Doctoral students conduct research in a substantive or methodological area related to cardiovascular epidemiology. Research traineeships may be available through Harvard Medical School for students interested in cardiovascular disease or aging; candidates must be US citizens or permanent residents who are enrolled in a degree program in epidemiology.

Clinical Epidemiology This area is designed primarily for clinicians and other health care professionals who wish to develop the quantitative and analytic skills needed for clinical research. Students take core courses in epidemiology and biostatistics to develop basic skills in study design and analysis that will allow them to examine clinical questions related to the diagnosis and treatment of disease. Additional courses in epidemiology and courses offered by other departments address related topics such as health status and quality of life measurement, decision analysis, cost-effectiveness analysis, health services research, and quality improvement of health care.

While the appropriate content for this area may be covered by taking courses offered during the regular academic year (fall and spring semesters), requirements for the two-semester Master of Science (SM) degree may also be partially fulfilled by taking the summer courses offered through the Program in Clinical Effectiveness (see page 82). Clinical Effectiveness students begin their program by taking a core set of courses during an initial summer period. They complete the program by taking advanced courses during the regular academic year and, if desired, during a second summer period. Alternatively, Clinical Effec-

NICOLE PISCATELLI

Master's student,
Department of Epidemiology

Nicole Piscatelli was in a pre-med undergraduate program when she became intrigued by a

friend's work in epidemiology. She was drawn to the field "because it's the backbone of all aspects of public health," she says. "All work in public health relies on solidly derived data."

As part of her studies, Piscatelli works with the Massachusetts Department of Public Health's HIV/AIDS Bureau, studying data collected at state-funded sites for HIV testing. "I've been analyzing risk behavior profiles of people over age 50," Piscatelli says. "We've found that the risk profile of people in this older group is not very different from that of younger people. I hope this finding will lead to a greater awareness that older people need to be included in HIV/AIDS prevention campaigns."

Upon graduation, Piscatelli intends to use the skills she's gained doing this project "to develop an avenue for education regarding cancer prevention," she says.

tiveness students who only take courses during two summer periods can satisfy the requirements for this degree by completing a supervised research project. The content of this project typically entails the design and implementation of a clinical study, the analysis of the resulting data, and the creation of a manuscript of suitable quality for publication. An outline for this project must be submitted at time of application.

Environmental/Occupational Epidemiology

This area is closely associated with the concentrations in Environmental Epidemiology and Occupational Health in the Department of Environmental Health. Students take courses in epidemiology, environmental health, occupational health, biostatistics, and toxicology. Doctoral students conduct research in a substantive or methodologic area related to environmental or occupational health.

Financial assistance may be available for individuals who plan to pursue research and teaching careers in environmental and/or occupational epidemiology. Candidates for these traineeships must be US citizens or permanent residents enrolled in a doctoral program or postdoctoral fellowship program in epidemiology, environmental health, or occupational health.

Epidemiologic Methods This area provides training in the development and application of new methods in epidemiologic research. Through courses offered by the Department of Epidemiology, students learn to use and justify classical epidemiologic methods in study design, data analysis, and interpretation of results. Through courses offered by the Department of Biostatistics, students receive training in biostatistical areas most relevant to epidemiologic research. Through advanced course work and tutorials, students are introduced to recent innovations in epidemiologic methodology. Doctoral students conduct research with faculty specializing in the development of new methodologies and in novel applications of existing methodologies to important data sets in epidemiology. Students enrolling in this area of interest ordinarily have completed four semesters of college calculus and one semester of linear algebra.

Infectious Diseases This area is designed to familiarize students with the epidemiology and biology necessary to understand the interactions of infectious agents, their hosts, and their vectors. Social and cultural aspects of in-

fectious diseases and of related health services are covered, as are new and resurgent infectious diseases. Students in this area take courses in the departments of Epidemiology, Immunology and Infectious Diseases, and Population and International Health. More advanced topics of infectious disease epidemiology are covered in tutorials with faculty specializing in this area (Freeman, Hunter, and Wilson).

Molecular Epidemiology This area introduces students to the application of molecular methods to epidemiologic studies. These methods may be useful as measures of exposure, disease susceptibility, or disease outcome. A range of relevant courses are available, as are research opportunities, particularly in association with the Department of Environmental Health, the Dana-Farber Cancer Institute, and the Joslin Diabetes Clinic.

Oral and Dental Health Epidemiology This area prepares dentists and others interested in oral diseases for research and teaching careers in epidemiology with an emphasis on oral epidemiology and dental health. Students follow the required curriculum in epidemiology with additional course work in oral biology and the epidemiology of oral and dental diseases. Students also participate in field research activities, case-control studies of oral health risk factors, or clinical trials designed to test preventive, diagnostic, or therapeutic interventions. Funding may be available for US citizens or permanent residents enrolled in the doctoral program. This area of interest is jointly administered by the Department of Oral Health Policy and Epidemiology in the Harvard School of Dental Medicine and the HSPH Department of Epidemiology.

Pharmacoepidemiology This area is designed for those interested in studying the frequency and determinants of both unintended and expected effects of drugs and medical devices. Studies of the pattern of utilization of drugs and devices, cost-benefit and risk-benefit analyses, and investigation of the distribution of diseases possibly amenable to medical intervention represent important secondary themes. The Department of Epidemiology of-

For more information about research and training in Environmental/Occupational Epidemiology, please contact Richard R. Monson, MD, SD, Department of Epidemiology, 677 Huntington Avenue, Boston, MA 02115.

Interdisciplinary Program in Infectious Disease

Doctoral-level educational and training opportunities relating to infectious disease are available through the Interdisciplinary Program in Infectious Disease. Students in this program fulfill the departmental requirements for doctoral students with additional coursework in biology, quantitative methods, and infectious disease. For more information on this program, see page 5. Master's-level students may follow the departmental track in infectious diseases.

For more information about research and training in **Pharmacoepidemiology**, please contact Alexander M. Walker, MD, DPH, Department of Epidemiology, 677 Huntington Avenue, Boston, MA 02115.

Phone: 617-432-4565

Fax: 617-566-7805

E-mail:

amwalker@episun1.harvard.edu

For more information about research and training in **Psychiatric Epidemiology**, please contact Jane Murphy, PhD, Massachusetts General Hospital, Department of Psychiatry, 149 13th Street, Suite 9155, Charlestown, MA 02129-2060.

Phone: 617-726-1822

Fax: 617-724-8301

Faculty

Department Chair: Alexander M. Walker, MD, MPH, DPH (Harvard University); Henry Pickering Walcott Professor of Epidemiology. Pharmacoepidemiology; study design for observational research.

Alberto Ascherio, MD (University of Milan), Diploma (London School of Hygiene and Tropical Medicine), MPH, DPH (Harvard University); Assistant Professor of Nutrition and Epidemiology. Relation of dietary factors to the occurrence of human disease.

Lisa F. Berkman, MS, PhD (University of California, Berkeley); Florence Sprague Norman and Laura Smart Norman Professor of Health and Social Behavior and of Epidemiology. Social epidemiology; epidemiology of aging.

fers an intermediate-level course in pharmacoepidemiology and a variety of ongoing research projects. Relevant courses elsewhere in the school cover such areas as clinical trials, meta-analysis, drug regulatory affairs, decision analysis, and vaccine development. Students in pharmacoepidemiology have the opportunity to attend courses and congresses outside the school and are encouraged to undertake internships of up to three months in pharmaceutical firms or regulatory agencies. Students ordinarily have a prior degree in medicine or pharmacy. Others are expected to acquire substantially equivalent expertise in areas related to their research. Financial support may be available for doctoral students pursuing thesis research.

Psychiatric Epidemiology This area introduces students to concepts and methods for studying the genetic and psychosocial factors that relate to the prevalence, incidence, and outcome of different types of psychiatric illnesses. Emphasis is given to issues of reliability and validity in studying such disorders among children, adolescents, and adults. The curriculum consists of six specialized courses as well as related courses offered in the Departments of Epidemiology and Biostatistics. Funding may be available through the National Institute of Mental Health for doctoral and postdoctoral traineeships in epidemiologic and statistical methods as applied to the study of psychiatric disorders; eligible students typically hold degrees in medicine, biological or social sciences, or quantitative methods, and must be US citizens or permanent residents.

Women, Gender, and Health

HSPH offers a number of courses relating to women, gender, and health. For more information, see page 5.

Reproductive Epidemiology This area prepares students for research and teaching careers in epidemiology with a special emphasis on reproductive health in women and men. A number of relevant courses are available in the Departments of Epidemiology, Biostatistics, Environmental Health, Health and Social Behavior, Maternal and Child Health, and Population and International Health. Tutorials are

often arranged to augment course offerings and to provide the opportunity for in-depth study or research experience. The curriculum for each student is tailored according to the individual's background and interests.

In addition to the course work required for the master's degree, doctoral students conduct research with faculty members who have research projects related to reproductive health. Recent students have studied the etiology of infertility, risk factors for fetal death, and the occurrence of uterine leiomyomata. Graduates are employed in academic medicine, government agencies, non-governmental organizations, and private foundations. Students with a prior professional degree apply for the two-semester master's degree; those with a bachelor's degree and relevant work experience apply for the four-semester master's program. Candidates interested in the doctoral program are encouraged to call to discuss potential research and funding opportunities.

Master of Science in Epidemiology (four-semester program)

The master's programs provide students with basic skills in epidemiologic and quantitative methods and in computing, in preparation for research or academic careers. The four-semester (80-credit) SM program is designed for individuals who hold a bachelor's degree and have a strong background in biology and mathematics. In addition to epidemiology and statistics courses, students study the basic medical sciences and the biological aspects of public health problems. The program is primarily intended for students who expect to continue toward a doctoral degree.

Required courses include EPI 201a, *Introduction to Epidemiology*; EPI 202, *Elements of Epidemiologic Research*; EPI 203c, *Design of Case-Control and Cohort Studies*; EPI 204d, *Analysis of Case-Control and Cohort Studies*; BIO 201ab, *Introduction to Statistical Methods*; and BIO 210cd, *The Analysis of Rates and Proportions*. Recommended courses include EH 205ab, *Human Physiology*; BIO 211cd, *Regression and Analysis of Variance in Experimental Research*; BIO 213ab, *Applied Regression for Clinical Research*; CCB 210ab,

Introduction to Cancer Biology; CCB 204ab, *Principles of Toxicology*; DBE 208cd, *Pathophysiology of Human Disease*; and ID 265c, *Practice of Quantitative Methods*.

Master of Science in Epidemiology (two-semester program)

The two-semester (40-credit) SM provides students with basic skills in epidemiologic and quantitative methods and in computing, in preparation for research or academic careers. Required courses include EPI 201a, *Introduction to Epidemiology*; EPI 202, *Elements of Epidemiologic Research*; EPI 203c, *Design of Case-Control and Cohort Studies*; EPI 204d, *Analysis of Case-Control and Cohort Studies*; BIO 201ab, *Introduction to Statistical Methods*; and BIO 210cd, *The Analysis of Rates and Proportions*. The remainder of the schedule reflects areas of special interest and may include supervised research. The two-semester program is open to applicants with a medical degree or master's-level background in biology.

Doctor of Science in Epidemiology/ Doctor of Public Health

The doctoral programs are designed for students who plan careers in epidemiologic research or teaching or for those who aspire to leadership roles in the health professions. Applicants to the SD program should hold at least a bachelor's degree and have a strong background in biology and mathematics. For these individuals, the degree generally takes four to five years to complete; candidates with relevant doctoral degrees may complete the program in three years. The DPH degree is available to students holding a prior doctorate and an MPH degree.

Course requirements are the same as for the SM program, with the addition of EPI 205ab, *Practice of Epidemiology*; EPI 207b, *Advanced Epidemiologic Methods*; EPI 227d, *Principles of Screening*; and for non-physicians, EH 205ab, *Human Physiology*, and DBE 208cd, *Pathophysiology of Human Disease*. In addition, 10 credits are required in substantive courses offered by the department, 10 credits in biostatistics above the level of BIO 200, and 10 credits in a second minor field.

Unless courses equivalent to those described for the master's program have been taken previously, most of the first two years is devoted to course work. Subsequently, doctoral candidates must pass the departmental written examination and the school-wide oral qualifying examination; complete, defend, and submit a thesis; and gain experience in teaching and research.

Courses Offered by the Department of Epidemiology, 1998–99

Please note that this list may be incomplete and is subject to change. Detailed course listings, including information about prerequisites, course activities, and scheduling, are distributed to students with registration information. Either EPI 200 or EPI 201 satisfies the school-wide requirement for an introductory course in epidemiology; however, individual programs may require one or the other.

Letters following course numbers indicate the period(s) in which a course is given: a and b (fall quarters); c and d (spring quarters); e and f (one-week sessions in January and March); s and t (1999 summer sessions).

EPI 200. Principles of Epidemiology EPI 200a. (Hankinson, Trichopoulos) EPI 200s. (Hofman)

Introduces basic principles and methods of epidemiology. Lectures are complemented by seminars devoted to exercises or to the discussion of current epidemiologic studies. (2.5 credits)

EPI 201a. Introduction to Epidemiology (Rimm, Robins)

Covers principles and methods used in epidemiologic research. Designed for students majoring in epidemiology or biostatistics, or who desire a more detailed introduction to the main issues encountered in the design, implementation, and analysis of epidemiologic studies. (2.5 credits)

EPI 202. Elements of Epidemiologic Research EPI 202b. (Spiegelman, Mittleman) EPI 202t. (Mittleman)

Introduces elements of study design, data analysis, and inference in epidemiologic research. May serve as an introduction to more advanced study or as a concluding course for those desiring a working knowledge of epidemiologic methods. (2.5 credits)

EPI 203c. Design of Case-Control and Cohort Studies (Ascherio, Walker)

Examines common problems in the design, analysis, and interpretation of cohort and case-control studies. Considers problems of exposure and disease definitions, time-dependent effects, confounding, and misclassification, and introduces relevant statistical methods. (2.5 credits)

Stephen L. Buka, SM, SM, SD (Harvard University); Associate Professor of Maternal and Child Health and Epidemiology. Causes and prevention of behavioral and developmental disorders of children.

Kin-Wei Arnold Chan, MD (National Taiwan University), MPH, SD (Harvard University); Assistant Professor of Epidemiology. Outcomes research on pharmaceutical agents in naturalistic settings, including cost-effectiveness analysis, quality-of-life assessment, pre-marketing economic evaluation of potential products, and post-market surveillance of adverse events; epidemiology of rheumatic diseases.

David C. Christiani, MD (Tufts University), SM, MPH (Harvard University); Professor of Occupational Medicine and Epidemiology and Director of the Educational Resource Center for Occupational Safety and Health; Professor of Medicine, Harvard Medical School. Occupational diseases; biomarkers and molecular epidemiology.

E. Francis Cook, MA (University of Massachusetts), SM, SD (Harvard University); Professor of Epidemiology. Epidemiologic methods; clinical epidemiology.

Marlene B. Goldman, SM, SD (Harvard University); Associate Professor of Epidemiology. Effect of environmental and occupational exposures on reproductive health; cancer epidemiology.

Susan E. Hankinson, MS, MPH (University of Minnesota), SD (Harvard University); Assistant Professor of Epidemiology. Relationships between hormonal factors and risk of breast and ovarian cancers.

David J. Hunter, MB, BS (University of Sydney), MPH, SD (Harvard University); Associate Professor of Epidemiology and Director of the Harvard Center for Cancer Prevention. Cancer epidemiology; molecular epidemiology.

Camara P. Jones, MD (Stanford University), PhD (Johns Hopkins University); Assistant Professor of Health and Social Behavior and Epidemiology. Development and application of epidemiologic methods to explore social stresses associated with racism.

Frederick P. Li, MD (University of Rochester), MA (Georgetown University); Professor of Clinical Cancer Epidemiology; Professor of Medicine,

Harvard Medical School. Inherited susceptibility to cancer; clinical and molecular epidemiology.

Richard R. Monson, MD, SM, SD (Harvard University); Professor of Epidemiology (Environmental Health and Epidemiology). Relationship between the workplace, the environment, and disease.

Nancy E. Mueller, SM, SD (Harvard University); Professor of Epidemiology. The role of viruses in the etiology of cancer; cancer epidemiology.

Eric B. Rimm, SD (Harvard University); Assistant Professor of Epidemiology and Nutrition. Relation of dietary factors to the occurrence of human diseases, in particular cardiovascular disease.

James M. Robins, MD (Washington University); Professor of Epidemiology and Biostatistics. Development of analytic methods for drawing causal inferences from complex observational and randomized studies with time-varying exposures or treatments.

Donna L. Spiegelman, SM, SD (Harvard University); Associate Professor of Epidemiology and Biostatistics. Binary data models with measurement error and misclassification in model covariates.

Meir J. Stampfer, MD (New York University), MPH, DPH (Harvard University); Professor of Epidemiology and Nutrition. Influence of diet and exogenous hormones on health, particularly heart disease and cancer.

Sherri O. Stuver, SD (Harvard University); Assistant Professor of Cancer Epidemiology. Cancer epidemiology; virus-associated disease.

Dimitrios V. Trichopoulos, MD (University of Athens), SM (Harvard University); Vincent L. Gregory Professor of Cancer Prevention and Professor of Epidemiology. Cancer epidemiology.

Walter C. Willett, MD (University of Michigan), MPH, DPH (Harvard University); Fredrick John Stare Professor of Epidemiology and Nutrition; Professor of Medicine, Harvard Medical School. Relation of dietary factors to the occurrence of human disease, in particular heart disease and cancer.

Xiping Xu, MD (Anhui Medical University, China), PhD (University of Tsukuba, Japan), SM (Harvard University); Associate Professor of Occupational Epidemiology; Associate Professor of Medicine, Harvard Medical

EPI 204d. Analysis of Case-Control and Cohort Studies (Hsieh, Joshipura)

Develops material presented in EPI 203c into the rationale and methodology for mathematical modeling of study parameters. Emphasizes Poisson and logistic regression. (2.5 credits)

EPI 205ab. Practice of Epidemiology (Rimm, Stampfer)

Requires students to present and discuss plans for collection and analysis of epidemiologic data. Preparatory work is done under tutorial arrangements with members of the faculty. Emphasizes conceptual issues rather than execution. (2.5 credits)

EPI 207b. Advanced Epidemiologic Methods (Robins)

Provides in-depth investigations of statistical methods for drawing causal inferences from observational studies. Defines informal epidemiologic concepts such as confounding, comparability, overall effects, direct effects, intermediate variables, and selection bias within the context of a counterfactual causal model. Emphasizes methods for the analysis of causal effects of time-varying exposures in the presence of time dependent covariates that are simultaneously confounders and intermediate variables. (2.5 credits)

EPI 208st. Introduction to Clinical Epidemiology (Singer, Cook)

Covers principles and methods used in traditional and clinical epidemiologic research. (5 credits)

EPI 211cd. Reproductive Epidemiology (M. Goldman)

Applies principles of epidemiology to diseases and disorders of reproduction in women and men. Considers study design and methodology in studies of

reproductive health. Topics include infertility, abortion, reproductive hazards in the workplace, sexually transmitted diseases, reproductive cancers, and premature menopause. (2.5 credits)

EPI 212a. Epidemiology of Cardiovascular Diseases (Stampfer)

Reviews the epidemiology of chronic cardiovascular diseases. Presents demographic distribution and time trends of these diseases and discusses known risk factors. (1.25 credits)

EPI 213c. Epidemiology of Cancer (Hankinson, Giovannucci)

Reviews basic concepts and issues central to cancer epidemiology. Considers the descriptive epidemiology of

cancer and discusses implications of the biology of cancer for identification of risk factors. Examines the role of smoking, radiation, nutrition, and other exposures. (2.5 credits)

EPI 214d. Epidemiologic Analysis of Outbreaks and Infectious Diseases (Freeman, Platt)

Discusses the use of epidemiologic methods in analyzing outbreaks and investigating infectious diseases. Illustrates different types of problems and methods of analysis and stresses literature review and practical methodology. (2.5 credits)

EPI 216d. Epidemiology in Public Health Practice (Dicker)

Teaches the principles and practice of field epidemiology through a series of case studies. Focuses on resolving conflicts between epidemiologic theory and practical considerations that can arise while addressing public health problems in the community. (2.5 credits)

EPI 217a. The Epidemiology of Adult Psychiatric Disorders (Tsuang, Wang)

Covers classical and recent readings on the occurrence and distribution of psychiatric illness. Describes the application of basic epidemiologic research designs to the study of psychiatric conditions. (2.5 credits)

EMH 218d. Environmental and Social Risk Factors for Psychiatric Disorders (Buka, Murphy, Berkman)

Reviews research methodology and empirical studies of genetic and psychosocial risk factors for psychiatric disorders. Topics include prenatal risk factors, childhood trauma, social networks, and social support, ethnicity and religion, gender and mental health, and psychosocial risk factors. (1.25 credits)

EPI 219b. Assessment Concepts and Methods in Psychiatric Epidemiology (Blacker)

Presents the application of basic epidemiologic and psychometric concepts and methods in psychiatric research. Topics include measurement theory, reliability, validity, screening, and diagnostic classification procedures. (2.5 credits)

EPI 220d. Psychiatric Screening and Diagnostic Tests (Murphy)

Focuses on interview schedules designed to identify psychiatric disorders and to provide diagnoses. Provides practical experience in administering and analyzing responses to diagnostic interviews and screening measures. (2.5 credits) Not offered 1998–99.

EPI 221b. Pharmacoepidemiology (Walker)

Covers inference about the effects of pharmaceuticals from case reports, case series, vital statistics and other registration schemes, cohort studies, and case-control studies. Discusses decision making with inadequate data from the perspectives of manufacturers and regulators. (2.5 credits)

EPI 222d. Genetic Epidemiology of Diabetes and Its Complications (Krolewski, Warram)

Uses the genetics of diabetes and its complications, together with the descriptive epidemiology of these conditions, to illustrate the process of generating etiologic hypotheses that can be studied by the methods of genetic epidemiology. (2.5 credits) Offered 1998–99 and alternate years.

EPI 224a. Cancer Prevention (Colditz)

Introduces cancer prevention and control from a broad range of disciplines. Covers epidemiology and biology of cancer, approaches to prevention through behavior change, and models of behavior change. (2.5 credits)

EPI 225c. Epidemiology of Infectious Diseases (Freeman)

Covers basic concepts and issues central to the epidemiology of infectious diseases. Topics include properties of infectious agents and the nature of host defenses, the dynamics of occurrence of communicable diseases, and the relation between human behavior and the actions of governments. (2.5 credits)

EPI 227d. Principles of Screening (Colditz, Kawachi, Rockhill)

Provides a basic understanding of the principles of screening. Emphasizes screening for cancer and applications in other settings. Controversies and limitations of screening strategies are discussed. (2.5 credits)

EPI 228ab. Oral Epidemiology (Douglass, Joshipura)

Discusses the principal measures and methods of epidemiology as they apply to oral conditions; the distribution, etiology, and risk factors for a number

of these conditions; and links between oral epidemiologic data and health policy issues. (2.5 credits) Offered 1998–99 and alternate years.

EPI 229b. Ophthalmic Epidemiology (Seddon)

Reviews the epidemiology of leading causes of blindness, including cataract, macular degeneration, glaucoma, and diabetic retinopathy. Considers results from various epidemiologic study designs. (1.25 credits) Offered 1998–99 and alternate years.

EPP 232b. Distribution of Infectious Diseases in Time and Space (Wilson)

Examines factors that influence the appearance, dissemination, frequency, and disappearance of infectious diseases in an area or population, including transmission mechanisms, migration, and the impact of climatic, environmental, and demographic changes. (2.5 credits) Not offered 1998–99.

EPI 233d. Research Synthesis and Meta-Analysis Applications In Public Health and Clinical Medicine (Colditz)

Reviews the principles of meta-analytic statistical methods and explores the application of these to data sets. Application of methods includes considerations for clinical trials and observational studies. The use of meta-analysis to explore data and identify sources of variation among studies is emphasized, as is the use of meta-analysis to identify future research questions. (2.5 credits)

EPI 236s. Advanced Methods in Clinical Epidemiology (Cook)

Examines design, measurement, and analytic issues encountered in clinical research. Focuses on analytic techniques such as stratification, multivariate modeling, and recursive partitioning. (5 credits)

EPI 240d. Use of Biomarkers in Epidemiologic Research (Hankinson, Stuver)

Provides an overview of issues pertinent to the collection, measurement, and statistical analysis of biomarker data. Topics include study-design considerations, sample storage, sources of laboratory variability, assay evolution, use of pooled samples, and repeated measures analysis. (1.25 credits) Not offered 1998–99.

EPI 241ab. Clinimetrics (Cook)

Examines methodologic issues related to measures of health status encountered in clinical research, including generic and disease-specific measures of health, quality of life, functional status, severity of disease, and co-morbidity. (2.5 credits)

EPI 242abcd. Seminar in Clinical Epidemiology (Singer, Cook, Orav)

Draws on presentations by guest speakers to expose students to a number of clinical research projects and a variety of research designs and analytic strategies. Faculty members summarize methodologic issues pertinent to the presentations. (2.5 credits)

School. Environmental, occupational, and genetic epidemiology of respiratory, cardiovascular, and metabolic diseases.

The following faculty members have secondary appointments at HSPH. Their primary affiliation is with Harvard Medical School, unless otherwise indicated.

Deborah Blacker, MD, SD (Harvard University); Assistant Professor in the Department of Epidemiology. Genetic epidemiology of affective disorders and of Alzheimer's disease.

Julie E. Buring, MS (University of Washington), SD (Harvard University); Associate Professor in the Department of Epidemiology. Epidemiology of cardiovascular disease and cancer; teaching of epidemiology; epidemiologic methodology.

Graham A. Colditz, MB, BS (University of Queensland), MPH, DPH (Harvard University); Associate Professor in the Department of Epidemiology. Cancer epidemiology; diet and chronic diseases.

Chester W. Douglass, DMD (Temple University), MPH, PhD (University of Michigan); Professor in the Department of Epidemiology. Primary affiliation: Harvard School of Dental Medicine. Oral epidemiology and health policy.

Jonathan Freeman, SM, SD (Harvard University), MD (Duke University); Assistant Professor in the Department of Epidemiology. Infectious diseases, especially nosocomial infections.

Charles H. Hennekens, MD (Cornell University), MPH, SM, DPH (Harvard University); Professor in the Department of Epidemiology. Epidemiology of cardiovascular disease, cancer, and infectious diseases.

Kaumudi J. Joshipura, SM, SD (Harvard University); Assistant Professor in the Department of Epidemiology. Oral epidemiology. Primary affiliation: Harvard School of Dental Medicine.

Andrzej S. Krolewski, MD, PhD (Warsaw Medical School); Associate Professor in the Department of Epidemiology. Diabetes mellitus epidemiology.

I-Min Lee, MB, BS (National University of Singapore), MPH, SD (Harvard University); Assistant Professor in the Department of Epidemiology. Epidemiology of cancer; physical activity and fitness and cancer incidence.

Thomas H. Lee, Jr., MD (Cornell University), SM (Harvard University); Associate Professor in the Department of Epidemiology. Prognostic stratification in, and cost-effectiveness analysis of, management of cardiovascular disease.

JoAnn E. Manson, MD (Case Western Reserve University), MPH, DPH (Harvard University); Associate Professor in the Department of Epidemiology. Chronic disease epidemiology.

Murray A. Mittleman, MDCM (McGill University), MPH, DPH (Harvard University); Assistant Professor in the Department of Epidemiology. Epidemiology of acute risk factors triggering myocardial infarction and stroke; methodological problems in implementing case-crossover studies; psychosocial factors and cardiovascular disease.

Jane M. Murphy, PhD (Cornell University); Professor in the Department of Epidemiology. Longitudinal studies of psychiatric epidemiology in general populations.

Johanna M. Seddon, MD (University of Pittsburgh), SM (Harvard University); Associate Professor in the Department of Epidemiology. Ophthalmology.

Daniel E. Singer, MA (Oxford University), MD (Harvard University); Associate Professor in the Department of Epidemiology. Preventive health care.

Ming T. Tsuang, MD (National Taiwan University), PhD (University of London); Professor in the Department of Epidemiology. Follow-up and family studies of psychiatric disorders with emphasis on schizophrenia and affective disorders.

Mary E. Wilson, MD (University of Wisconsin); Assistant Professor in the Departments of Population and International Health and Epidemiology. Infections acquired during travel and residence in tropical and developing countries.

EPI 244c. Methods for Studying Genetic Factors in Psychiatric Epidemiology (Santangelo, Van Eerdewegh, Tsuang)

Presents classical and current research methodology for genetic epidemiologic studies of complex (non-Mendelian) disorders using examples drawn from specific psychiatric disorders such as schizophrenia, major affective disorders, substance abuse, anxiety disorders, and Alzheimer's disease. Topics include issues in phenotype definition, Mendelian genetics, design and analysis of family, twin, and adoption studies, heritability estimation, segregation analysis, linkage analysis methods, association studies, and other molecular methods. (2.5 credits) Offered 1998-99 and alternate years.

EPI 245b. Epidemiology: Principles and Methods (Trichopoulos, Joshipura)

Emphasizes the principles and concepts needed for epidemiologic research. Teaches students to choose between alternative study designs and analytical options and to integrate biomedical and epidemiologic considerations. (2.5 credits) Not offered 1998-99.

EPI 247a. Epidemiologic Methods Development—Past and Present (Mittleman)

Provides students with an understanding of the theoretical basis of currently used epidemiologic methods and helps students acquire an understanding of the process of developing new approaches by reviewing classic papers and tracing the evolution of epidemiologic ideas. (2.5 credits)

EPI 250c. Molecular Epidemiology of Cancer (Hunter)

Offers an overview of the molecular genetics and epidemiology of cancer, emphasizing the use of new laboratory techniques in epidemiologic studies. Discusses the application of epidemiologic methods to the generation of new etiologic hypotheses. (1.25 credits)

EPI 251b. Studies in Molecular Epidemiology (Hunter)

Acquaints students with recent developments in molecular epidemiology, including molecular markers of environmental exposures, applications to risk assessment, and genetic markers of susceptibility. Applications cover cancer, cardiovascular disease, and infectious diseases. (1.25 credits)

EPI 252d. Epidemiology of Virus-Associated Malignancy (Mueller, Stuver)

Reviews the epidemiology and public health impact of virus-associated malignancy. Discusses the role of host response and the use of serology and viral probes as risk markers. (1.25 credits)

EPI 283f. Topics in Cancer Epidemiology (Mueller)

Reviews key papers in cancer epidemiology, emphasizing issues in hypothesis testing, study design, and integration of biological markers. (1 credit)

EPI 310. Research in Clinical Epidemiology (Cook)

Fulfills the clinical research requirement for students concentrating in Clinical Epidemiology who intend to complete the requirements for the SM during summer study. The research project is determined by the faculty member assigned as principal advisor to the student. (Credit to be arranged)

Independent Study

Individual students or small groups of students who wish to go beyond the content of regularly scheduled courses may arrange with individual faculty members to participate in departmental research or to undertake specialized readings or studies, or to undertake specialized studies in the following areas: neoplastic diseases, cardiovascular disease, clinical epidemiology, molecular and genetic epidemiology, environmental epidemiology, occupational epidemiology, infectious diseases, epidemiologic methods, nutritional epidemiology, virus-associated chronic disease/AIDS, psychiatric epidemiology, pharmacoepidemiology, oral and dental health epidemiology, and reproductive epidemiology.

Adjunct Faculty

Hans-Olov Adami, MD, PhD; Professor of Cancer Epidemiology, University Hospital, Uppsala, Sweden.

Richard C. Dicker, MD, SM; Chief Medical Officer/Epidemiology Team Leader, Division of Health and Standards and Quality, Health Care Financing Administration.

Anders Ekblom, MB, MD, PhD; Associate Professor of Surgery, University Hospital, Uppsala, Sweden.

Albert Hofman, MD, PhD; Professor of Epidemiology, Chairman, Department of Epidemiology and Biostatistics, Erasmus University Medical School, Rotterdam, The Netherlands.

Chung-cheng Hsieh, MPH, SM, SD; Lecturer, Division of Biostatistics and Epidemiology, University of Massachusetts Medical Center.

Carlo LaVecchia, MD, MSc; Associate Professor, Medical Statistics and Biometrics Department, University of Milan.

K. Malcolm Maclure, SM, SD; Epidemiologist, Ministry of Health, Province of British Columbia, Canada.

Ralph S. Paffenbarger, Jr., MD, DrPH; Professor of Epidemiology, Emeritus, Stanford University.

Kenneth J. Rothman, DMD, MPH, DPH; Professor, Departments of Epidemiology and Community Medicine, Boston University.

Susan L. Santangelo, SD; Assistant Professor, Department of Psychiatry, New England Medical Center at Tufts University School of Medicine.

DEPARTMENT OF HEALTH AND SOCIAL BEHAVIOR

As both a philosophical stance and a practical reality, the Department of Health and Social Behavior views the social environment as a major determinant of health and behavior. Research is therefore anchored in social settings, such as communities, schools and colleges, workplaces, and health care delivery systems. Members of the department have ongoing research projects in each of these settings, organized by risk (social networks, socio-economic status, working conditions, literacy level, drug and alcohol use, diet, physical activity), by disease (cancer, cardiovascular and neurological diseases, arthritis, asthma, AIDS), and/or by population (children, adolescents, parents, older men and women). Recognizing the importance of public health communication, the department also emphasizes the role of interpersonal, small group, written, and mass media communications in all of its work.

The department's educational mission is to train both scholars and practitioners: scholars whose research will illuminate basic social determinants of health and who will identify and test innovative social interventions, and practitioners who are skilled in designing, implementing, and evaluating health-enhancing interventions in action settings and who appreciate the social ecology of health behavior as well as social and policy leverage points.

All students in Health and Social Behavior are required to take (at minimum) the school-wide requirements in biostatistics and epidemiology; students in SM programs must also fulfill core requirements in environmental health and public policy. In addition, the department requires two core courses: HMP 200c, *Social and Behavioral Dimensions of Public Health*, and HSB 201a, *Society and Health*. Beyond these core requirements, students may wish to concentrate their work on the conceptual models of relationships between social forces and health, on the design and evaluation of interventions for healthful change, or on the design of public policy to

The mission of the Department of Health and Social Behavior is to advance and apply new knowledge from the social and behavioral sciences to the solution of pressing public health problems. The department is working to understand the social and behavioral factors that challenge the health of populations and to develop interventions that can improve health and the quality of life.

improve health. Students are urged to work closely with their advisors to delineate education and career goals and plan a course of study. To facilitate this effort, the department has identified three areas of interest.

Social Determinants of Health This area of interest focuses on analysis of the major social conditions that affect the health of populations. Seminars, tutorials, and courses enable students to explore a range of health consequences of various social factors by studying varied subgroups, at different times and places, under diverse and changing conditions. Students examine mechanisms and processes

For more information about research and training in Health and Social Behavior, please contact Michele Brooks, Academic Coordinator, Department of Health and Social Behavior, 677 Huntington Avenue, Boston, MA 02115.

Faculty

Department Chair: Lisa F. Berkman, MS, PhD (University of California, Berkeley); Florence Sprague Norman and Laura Smart Norman Professor of Health and Social Behavior and of Epidemiology. Social epidemiology; epidemiology of aging.

Dolores Acevedo-Garcia, MPA, PhD (Princeton University); Assistant Professor of Health and Social Behavior. Effects of residential segregation on minority health; health effects of welfare reform and immigration policies on US immigrants and citizens; demographic projections of Latin American immigration to the US; race/ethnic, gender, and social class inequalities in health.

H. William DeJong, MA, PhD (Stanford University); Lecturer on Health Communication. Use of mass media for health promotion; alcohol and tobacco control policies; drunk driving prevention; violence prevention; organ donation.

Karen M. Emmons, MA, PhD (State University of New York at Stony Brook); Associate Professor of Health and Social Behavior. Health promotion; smoking and environmental tobacco smoke health effects; worksite and community-based interventions.

Thomas A. Glass, MA, PhD (Duke University); Assistant Professor of Health and Social Behavior. Psychosocial epidemiology; behavioral intervention models; gerontology; medical sociology.

Steven L. Gortmaker, SM, PhD (University of Wisconsin); Senior Lecturer on Sociology. Statistical evaluation methods; social class and infant and child health; obesity and television viewing; AIDS; chronic disease.

S. Jody Heymann, MPP, MD, PhD (Harvard University); Assistant Professor of Health and Social Behavior; Assistant Professor of Health Care Policy, Harvard Medical School. Influ-

through which social factors exert their impact, as well as mechanisms that mediate or moderate relationships between social factors and health outcomes.

Program Design and Planned Social Change

This area of interest focuses on the application of theory in the design of intervention programs as well as on research and evaluation methodology. Attention is given to the following design steps: problem diagnosis, assessment, formative research, program design, and evaluation. The social settings for interventions may include communities, workplaces, schools and colleges, and health care facilities. Populations of interest include those who are underserved, marginalized, and in special need. Targeted populations may be segmented by age, gender, socioeconomic status, ethnicity, and geographic location. Intervention strategies include community organizing and improvement, social marketing, communication, adult learning approaches, and advocacy.

Health and Social Policy A wide range of social policies have a dramatic impact on health including, but not limited to, labor, poverty, family, housing, and educational policy. This area of interest prepares students to design new and improve existing social policies and teaches strategies for the successful implementation of social policies that improve health. Students who study in this area may be interested in working on public policy through research, in the government, or in a nonprofit organization.

As described below, the department offers both a four-semester and a two-semester Master of Science (SM) program, as well as a program leading to the Doctor of Science (SD) or Doctor of Public Health (DPH) degree. Please refer to page 8 for information about the Master of Public Health concentration in Family and Community Health.

Master of Science in Health and Social Behavior (four-semester program)

The four-semester master's program prepares students for work in a variety of community, public, and private settings with a focus on

program design, supervision, and evaluation, and for work as members of research teams. For example, one recent graduate focuses on the implementation and evaluation of social marketing programs; another is a member of a research team examining measurement issues related to quality of life.

Students enter the four-semester program with a background (often a major) in the social/behavioral sciences and experience in the field. This degree does not require previous graduate work.

Of the 80 credits necessary to earn the four-semester SM, at least 20 must be earned in departmental courses. Students in this program must also fulfill core requirements in biostatistics, epidemiology, environmental health, and public policy. Students are encouraged to delineate professional goals and to develop an area of expertise. They often focus on a subject area (such as AIDS, addiction, cardiovascular risk reduction, cancer, environmental health, health education, the health of families, labor and workplace issues, literacy, and women's health) and/or a skill area (such as program design, program evaluation, communication, public policy, marketing). Master's students are encouraged to declare an area of interest within Health and Social Behavior and to complete an internship as part of their training.

Master of Science in Health and Social Behavior (two-semester program)

The two-semester master's program also prepares students for work in a variety of community, public, and private settings with a focus on program design, supervision, and evaluation, and for work as members of research teams. One recent graduate is serving as the evaluator on a violence prevention pro-

Women, Gender, and Health

HSPH offers a number of courses relating to women, gender, and health. For more information, see page 5.

JARVIS CHEN

Doctoral student, Department of Health and Social Behavior

When he directed a needle exchange program in Boston to help prevent the spread of HIV, Jarvis Chen witnessed the effects of AIDS on the gay and bisexual male population. "Then when I arrived at HSPH," Chen says, "I began to see the larger relationship between social context and disease."

"Emotional states affect our perception of the world; they also affect our behavior," says Chen. "In our department we're asking questions like, 'How do our experiences of the world, and factors like our social class, get translated into susceptibility to health on the one hand, or disease on the other?' For instance, if we are poor, how do our financial frustrations influence our behavior, and how might these behaviors influence our health?"

During his studies, Chen has been a teaching assistant for his department's HIV class. "When I graduate," he says, "I'd like to teach in a university setting, and continue this social epidemiology."

gram for adolescents; another works with a nonprofit organization coordinating international efforts related to women's health.

Students enter the two-semester program with a related graduate degree and with experience in the social/behavioral sciences or a public health field.

Of the 40 credits necessary to earn the two-semester SM, at least 15 must be earned in departmental courses. Students in this program must also fulfill core requirements in biostatistics, epidemiology, environmental health, and public policy. Students are encouraged to focus their work in a specific content or skill area. They should work closely with their advisors to develop a study plan early in the fall semester.

Doctor of Science in Health and Social Behavior/Doctor of Public Health

The doctoral programs train students as scholars and researchers who will identify new social and behavioral risks, who will test inno-

vative social interventions, and as practitioners who will design, implement, and evaluate health-enhancing interventions. Recent graduates are working in research and academic settings.

Doctoral programs are offered in three areas of interest: social determinants of health, program design and planned social change, and health and social policy. All students enter the doctoral programs with a strong foundation in the social and behavioral sciences and with an earned master's degree.

Requirements for doctoral students include area-specific course work in theory and methods; students should consult the department's doctoral handbook for a listing of required courses in each of the areas of interest. Doctoral candidates must pass the departmental written examination and the school-wide oral qualifying examination and must complete, submit, and defend a thesis based on original research.

Courses Offered by the Department of Health and Social Behavior, 1998-99

Please note that this list may be incomplete and is subject to change. Detailed course listings, including information about prerequisites, course activities, and scheduling, are distributed to students with registration information.

Letters following course numbers indicate the period(s) in which a course is given: a and b (fall quarters); c and d (spring quarters); e and f (one-week sessions in January and March); s and t (1999 summer sessions).

HMP 200c. Social and Behavioral Dimensions of Public Health (Berkman, Buka, Jones, Obermeyer) Introduces fundamental social and behavioral science concepts, methods, and theories needed to understand social influences on health status. Emphasizes quantitative and qualitative research methods in social sciences applied to observational and intervention-oriented studies. (2.5 credits)

HSB 201a. Society and Health (Kawachi) Analyzes major social variables that affect population health: poverty, social class, gender, race, family, community, work, behavioral risks, and coping resources. Examines health consequences of social and economic policies, and the potential role of specific social interventions. (2.5 credits)

ence of social, labor, and welfare policy on health; health-care policy for high-risk children with chronic conditions.

Camara P. Jones, MD (Stanford University), PhD (Johns Hopkins University); Assistant Professor of Health and Social Behavior and Epidemiology. Development and application of epidemiologic methods to explore social stresses associated with racism.

Ichiro Kawachi, MB, ChB, PhD (University of Otago, New Zealand), DipCommH (College of Community Medicine of New Zealand); Associate Professor of Health and Social Behavior. Social inequalities in health, especially related to income distribution; stress and cardiovascular disease; quality of life and healthy aging; tobacco control.

Nancy Krieger, MS (University of Washington), PhD (University of California, Berkeley); Associate Professor of Health and Social Behavior. Social inequalities in health, especially regarding race/ethnicity, social class, and gender; cancer, especially breast cancer; cardiovascular disease, especially hypertension; epidemiologic theory and history.

Rima E. Rudd, MSPH (University of Massachusetts), ScD (Johns Hopkins University); Lecturer on Health Education. Public health and adult education pedagogy; normative change and change strategies, including small group communications, community organizing, social marketing, and health and literacy.

Glorian Sorensen, MPH, PhD (University of Minnesota); Professor of Health and Social Behavior. Cancer prevention in the workplace; intervention research in community and occupational settings.

Henry Wechsler, AM, PhD (Harvard University); Lecturer on Social Psychology. Alcohol and drug use and related high-risk behaviors among youth; epidemiologic, preventive, and public policy approaches to substance abuse prevention.

The following faculty members have secondary appointments at HSPH. Their primary affiliation is with Harvard Medical School

Paul D. Cleary, MS, PhD (University of Wisconsin); Professor in the Department of Health and Social Behavior. Effectiveness of behavior change programs; design and use of patient reports on the quality and outcomes of medical care.

Lawren H. Daltroy, MPH (University of Michigan), DrPH (Johns Hopkins University); Assistant Professor in the Department of Health and Social Behavior. Application of social psychology and decision-making theory to patient education in chronic disease; functional status measurement in arthritis.

Thomas S. Inui, MD, ScM (Johns Hopkins University); Professor in the Department of Health and Social Behavior. Primary care effectiveness; health-related behavior; clinical prevention.

Sue Ellen Levkoff, MSW (New York University), SM, SD (Harvard University). Associate Professor in the Department of Health and Social Behavior. Influence of culture on the experience of and response to dementia symptoms; prevention of excess disability in cognitively impaired aged; delirium in the hospitalized elderly.

Adjunct Faculty

Anne M. Stoddard, SM, SD; Associate Professor of Public Health, University of Massachusetts.

Diana Chapman Walsh, MS, PhD; President, Wellesley College.

John E. Ware, Jr., MA, PhD; Senior Scientist, The Health Institute, New England Medical Center.

HSB 202b. Innovative Strategies in Health Education (Rudd)

Highlights issues of control, participation, efficacy, and empowerment with an emphasis on theory, design, and evaluation. Focuses on the development of theory-based health education strategies for change. (2.5 credits)

HSB 204b. Communication in Health Care Settings (Daltroy)

Focuses on theory and practice of health education in the clinical encounter: doctor-patient communication, patient education, adherence to medical regimen, and cognition and behavioral skills in chronic disease co-management. (2.5 credits)

HSB 205a. Teaching and Working with Groups (Rudd)

Uses role play and reflective analysis to help participants develop listening skills, experiment with activities that build group cohesion and trust, and focus on group maintenance as well as task-oriented roles. (2.5 credits)

HSB 207b. "Race" and Racism (Jones)

Explores the roles of "race" and racism in relation to health outcomes in the US. Topics include the history of the concept of "race," the use of "race" in scientific research, and the role of "race" as a social risk factor. (2.5 credits)

HSB 208d. Public Health Practice for Social Change (Rudd, C. Ryan)

Builds on dialogues with innovative community leaders to explore approaches used in public health practice. Emphasizes the experience of grass roots activists and the challenges to effective and responsible public health practice posed by social and economic inequalities. (2.5 credits) Offered 1998-99 and alternate years.

HSB 211b. Health Promotion Through the Mass Media (DeJong)

Covers the development of public communication campaigns in the field of health promotion: assessing the mass media's potential for health promotion, designing mass communication materials consonant with behavioral science principles and the public health model, and executing a media campaign. (2.5 credits)

HSB 212cd. Developing Radio Communications (DeJong)

Covers the development and use of radio communications in public health. Participants create an original radio commercial, moving from background research to scripting and final production. (2.5 credits)

HSB 214cd. Health and Literacy Practicum (Rudd, Comings)

Focuses on linkages between health and literacy and between health and adult education theory and methods. Participants hone skills in assessing literary demands in health communications as they engage in structured fieldwork. (5 credits) Offered 1998-99 and alternate years.

HSB 215ab. History, Politics, and Public Health: Theories of Disease Causation Across Time and Culture (Krieger)

Focuses on social and scientific contexts, content, and implications of theories of disease causation from diverse periods in history and various cultures. Teaches students a historical and critical perspective of current theories of disease causation. (5 credits)

HSB 216e. Use of Media to Work and Fight for Better Health Around the World (Berkman)

Presents theories of electronic communication and strategies of media lobbying. Reviews collected audio and video recordings made by important media thinkers. Course given in New York City. (1.25 credits)

HSB 217cd. Disaster Management (Pierce, Leaning)

Prepares those responsible for on-the-scene, immediate acute intervention during disasters by focusing on decision making under stress. Examines case studies within the theoretical framework of disaster planning, response, and assessment. (2.5 credits)

HSB 218c. Community Intervention Research Methods (Sorensen)

Teaches skills in intervention research design and methodology. Reviews phases of research for community studies; applies theoretical models to intervention and evaluation design; links study design to intervention planning, and community linkages to intervention research planning and implementation, and teaches skills in critiquing community intervention studies. (2.5 credits)

HSB 219f. Community-Oriented Primary Care (Jones)

Introduces the concept of community-oriented primary care (COPC) in which a health care facility takes on the community as a patient. (1.25 credits)

HSB 220cd. An Introduction to High-Risk Behaviors: Epidemiology, Prevention, and Public Policy

Examines behaviors that place an individual at higher risk of morbidity and mortality. Focuses on epidemiology of smoking, alcohol abuse, drug abuse, gambling, inactivity, lack of proper nutrition, violence, accidental injury, unsafe driving, and unsafe sex. (5 credits)

HSB 221cd. Psychosocial Theories of Health and Health Behavior (Emmons, Daltroy)

Explores theoretical approaches to health-related behavior change, emphasizing the use of psychosocial theories in research. Theories include the health beliefs model, reasoned action, planned behavior, social learning, and the transtheoretical model. (5 credits)

HSB 222c. Alcohol Abuse and Alcoholism from a Public Health Perspective (Wechsler)

Covers the nature and scope of alcoholism and alcohol abuse as a public health problem; patterns of use and abuse; diagnosis and medical complications; and treatment and prevention. (2.5 credits)
Not offered 1998-99.

HSB 225d. Health and Social Policy in the Workplace (Heymann)

Explores ways that workplace health and social policies create a positive or negative effect on the health and welfare of individuals, families, and communities. (2.5 credits)

HSB 226c. Gender and Health

Focuses on the social determinants of gender differences in health. Topics include women's representation in medical research and health consequences of gender stratification in the workplace. (1.25 credits)
Not offered 1998-99.

HSB 227cd. Planned Social Change (Rudd)

Introduces a disciplined and theory-based approach to program planning and evaluation. Applies social science principles to community assessment, program design, and a three-staged evaluation for health-related programs of planned social change. (5 credits)

HSB 228a. Psychosocial Aspects of Aging (Glass)

Presents the range of social, psychological, and ethical issues related to human aging and discusses the roles that public health could play in influencing the consequences of population aging. Topics include institutionalized perceptions of aging and productivity and vitality in late life. (2.5 credits)

HSB 240ab. Social and Behavioral Research Methods I (Gortmaker)

Covers aspects of social and behavioral research methods, including research design, measurement, sampling, data collection, and testing of causal theories. (5 credits)

HSB 241cd. Social and Behavioral Research Methods II (Glass, Berkman)

Provides students with an opportunity to develop a research protocol following an NIH format, including describing the sample, measures, study design, and analytic techniques. Students prepare written proposals for field methods, budgets, and budget justifications for review according to the format of an NIH site visit. (5 credits)

HSB 249b. Approaches to International Tobacco Control (Kawachi, Emmons)

Prepares students to apply training in epidemiology, statistics, management, and policy to the development of public health programs to curb tobacco use. Topics include tobacco industry global structure, marketing, and political strategies. (2.5 credits)
Not offered 1998-99.

HSB 250b. Inequality and Health (Kawachi, Kennedy)

Reviews, from economic, political, and sociologic perspectives, the major theories of social stratification; examines the epidemiologic evidence on social class, gender, and racial disparities in health and illness; and develops an interdisciplinary approach to analyzing the problem of inequality. (2.5 credits)
Not offered 1998-99.

HSB 270cd. Doctoral Seminar on Health and Social Behavior (Gortmaker)

Overview of the major questions pursued by doctoral students in HSB. (1.25 credits)

HSE 282t. Developing Questionnaires to Measure the Outcomes of Health Care (Inui, Connelly, Cook)

Emphasizes concepts, methods, and measures for assessing patients' health status and outcomes of care. Reviews qualitative and quantitative approaches to developing methods and presents some statistical methods. (2.5 credits)

Independent Study

Individual students or small groups of students who wish to go beyond the content of regularly scheduled courses may arrange with individual faculty members to participate in departmental research, undertake specialized readings, perform field projects, or carry out independent studies.

A child has blood drawn for hepatitis B screening at Boston's South Cove Community Health Center. The HepB Initiative is a student-organized effort to fight this deadly disease in Boston's Chinatown. HepB was cofounded by a student in the Department of Health and Social Behavior.

DEPARTMENT OF HEALTH POLICY AND MANAGEMENT

The Department of Health Policy and Management is a mission-oriented department concerned with improving the health care delivery system and mitigating public health risks in the United States and abroad. The department is dedicated to resolving major management and health policy problems through original research, advanced training, and dispute resolution.

Research priorities in the Department of Health Policy and Management are organized into eight broad areas: *health financing and insurance*, including the creation of new physician payment systems and the design of public policies dealing with rising insurance premiums; *management of health hazards*, for example by using risk assessment to set priorities for environmental health protection; *management of health care organizations*, including the application of corporate strategic planning concepts to the challenges faced by health systems and pharmaceutical firms; *management and evaluation of medical technology*, including the meta-analysis of data from clinical trials; *business and labor in health*, including the negotiation of occupational safety and health care benefits in the

collective bargaining process; *international health*, including evaluation of the cost-effectiveness of health programs in developing countries; *quality of health care*, including the design of better methods to measure quality; and *health care reform*, which includes the development of partnerships between the department and the corporate community to explore critical aspects of health policy and management.

The department's problem-solving orientation is exemplified by its strong ties to leading health practitioners in hospitals, HMOs, community health centers, health advocacy groups, corporate medical departments, health and environmental consulting firms, state and local health departments, legislative committees, federal regulatory agencies, and international agencies. Practical problem-solving skills are emphasized by an interdisciplinary faculty that includes management specialists, decision analysts, accountants, physicians, lawyers, policy analysts, economists, political scientists, and program evaluators.

The department has developed an effective job placement mechanism for its students that includes numerous contacts with potential employers on a national scale. Practitioners are invited to the department to discuss their work and career paths, and a system of faculty networking and professional contacts is used to link students with a broad range of health policy makers and executives.

As described below, the department offers both a four-semester and a two-semester Master of Science (SM) program, a Doctor of Science (SD) program, and participates in a university-wide Doctor of Philosophy (PhD) program in health policy, offered under the auspices of the Graduate School of Arts and Sciences. In addition, the department cosponsors study in Environmental Science and Risk Management with the Department of Environmental Health (see page 27). Please refer to pages 8 and 9 for information about the Mas-

ter of Public Health concentrations in Health Care Management and Law and Public Health.

Master of Science in Health Policy and Management (four-semester program)

The four-semester SM program is designed for students who are building professional careers in health-related fields and who aspire to leadership roles in the public or private sector. The program emphasizes professional skills and concepts, a solid grounding in the substance of health problems, rigorous quantitative training, and a curriculum that combines professional, academic, and clinical activities. Acquired knowledge is applied to practical situations through a required summer internship program and an applied field research program. Recent graduates have taken such positions as research analyst for Mathematica Policy Research and the Kaiser Foundation; program assistant for health at the Commonwealth Fund; client manager at Benchmarking Partners; analyst at Covance, Inc.; consultant with APM, Inc., Price Waterhouse, Gemini, and William Mercer; as well as positions with Blue Cross/Blue Shield, Decision Resources, Neighborhood Health Plan, Partners Healthcare System, Kaiser Permanente, and Smithkline Beecham. Others have gone on to doctoral programs.

Applicants come from a wide variety of undergraduate fields. They are expected to have work experience and an academic record, particularly in quantitative and analytical courses, that suggest outstanding potential in the areas of health policy and management. Applicants should have at least two years of relevant post-baccalaureate work experience in the health field; exceptions are occasionally made for outstanding candidates. Deferred admission is available for applicants who demonstrate strong potential but who lack sufficient professional experience in the health sector. These applicants work within the health field in positions approved by the program for a minimum of one year before matriculating.

Of the 80 credits necessary to earn the SM, required courses account for 30 to 35. All students take courses in epidemiology, statistics,

environmental health, health and social behavior, and economics. In addition, students must satisfy the requirements of at least one of the three areas of interest described below.

The *Guide to the Two-Year Master of Science Program*, available from the department, describes the requirements for each area of interest and lists courses throughout the university that are pertinent to each of the areas. Second-year students are encouraged to enroll in relevant courses at Harvard Business School, John F. Kennedy School of Government, and Harvard Graduate School of Education.

Management This area of interest is designed for students pursuing management careers in public or private sector health institutions. The course work gives students a range of managerial skills, including planning, marketing, managed care, financial analysis, cost accounting, budgeting, strategic planning, information systems, operations management, payment systems, economics, and organizational behavior, and tailors the use of these skills to the health setting.

Required courses for this area include EPI 200, *Principles of Epidemiology*; BIO 219ab, *Statistical Methods for HPM*; BIO 225c, *Multiple Regression Analysis for HPM*; HPM 205ab, *Economic Analysis for Public Health*; or 206ab, *Economic Analysis*; a course in both environmental health and health and social behavior; and HPM 290abcd, *Applied Research and Practice in HPM*; plus an additional 17.5 credits from a list of selected courses on management and analysis.

Policy This area of interest is designed for students who wish to become involved in the formulation of health policy, including such areas as medical care policy at local, state, and national levels; health finance and insurance; access to health care; reimbursement policies to institutions and practitioners; medicaid and medicare reform; injury control; mental health; and substance abuse.

Required courses for this area include EPI 200, *Principles of Epidemiology*; BIO 219ab, *Statistical Methods for HPM*; BIO 225c, *Multiple Regression Analysis for HPM*; HPM 206ab, *Economic Analysis*; HPM 207ab, *Econometrics for Health Policy*; HPM 208cd, *Health Care*

For more information about SM and SD programs in Health Policy and Management, please contact Kristine L. Forsgard, Deputy Director of Academic Programs,

Department of Health Policy and Management, 677 Huntington Avenue, Boston, MA 02115.

Faculty

Department Chair: Arnold M. Epstein, AM (Harvard University), MD (Duke University); Professor of Health Policy and Management. Access and quality of care, especially in disadvantaged populations.

Robert J. Blendon, MBA (University of Chicago), MPH, ScD (Johns Hopkins University); Professor of Health Policy and Management. Politics of health care; access to health care; approaches to health care reform; influence of public opinion in shaping health policy.

Troyen A. Brennan, MA (Oxford University), JD, MPH, MD (Yale University); Professor of Law and Public Health; Professor of Medicine, Harvard Medical School. Medical ethics; personal injury and environmental litigation; medical malpractice and health policy reform.

Peter I. Buerhaus, MS (University of Michigan), PhD (Wayne State University); Assistant Professor of Health Services Administration. Cost-effective use of the nation's supply of registered nurses.

Paul H. Campbell, MPA (Portland State University), SD (Harvard University); Lecturer on Management. Financial management, strategic planning, and reimbursement systems; health services in developing countries.

Harvey V. Fineberg, MD, MPP, PhD (Harvard University); Professor of Health Policy and Management and Provost of Harvard University. Technology assessment; cost effectiveness and decision analysis; AIDS policy, prevention, and education; vaccine evaluation and policy; health care reform.

Susanne J. Goldie, MD (Albany Medical College), MPH (Harvard University); Assistant Professor of Health Decision Science. Development of disease-specific transition models; quality of life assessment for individuals and populations; cost-effectiveness analysis of preventive medical interventions; programming methods in clinical decision modeling.

John D. Graham, AM (Duke University), PhD (Carnegie-Mellon University); Professor of Policy and Decision Sciences and Director of the Center for Risk Analysis. Environmental protection; prevention of intentional and accidental injury.

James K. Hammitt, SM, MPP, PhD (Harvard University); Associate Professor of Health Policy and Management. Mathematical modeling and analysis of economic behavior and decision making under uncertainty, with applications to valuation, regulation, and management of health and environmental quality.

David Hemenway, AM (University of Michigan), PhD (Harvard University); Professor of Health Policy and Director of the Harvard Injury Control Center. Intentional and unintentional injury; health care economics.

William C. Hsiao, MPA, PhD (Harvard University); K. T. Li Professor of Economics; Member of the Faculty, Harvard Business School. Health care systems; control of health care costs; universal insurance coverage.

Nancy M. Kane, MBA, DBA (Harvard University); Lecturer on Management. Financial health and competitive strategies of health care organizations; provider behavior under third-party payment systems.

Jack Kasten, MPH (University of Michigan), JD (Boston College); Lecturer on Health Services. Managed care; service utilization; manpower issues; hospital organization and management.

Karen M. Kuntz, SM, SD (Harvard University); Assistant Professor of Health Decision Science. Cost effectiveness analysis of cancer screening strategies and development of disease-specific multiattribute utility scales.

Leonard J. Marcus, MSW (University of Wisconsin), PhD (Brandeis University); Lecturer on Public Health Practice. Negotiation, conflict resolution, and use of mediation in health care settings; effects of conflict on health care decision-making and outcomes.

Regulation and Planning; HPM 243c, *Health Economics: Economic Analysis of the Health Care System*; a course in both environmental health and health and social behavior; and HPM 290abcd, *Applied Research and Practice in HPM*. The variety of recommended electives permits students to acquire additional skills in areas such as epidemiology and quantitative policy analysis and to develop specialties in specific health problems.

Research This area of interest is designed for students looking toward doctoral education and research careers in fields such as health economics, quality of care, technology assessment, health decision analysis, cost-effectiveness analysis, cost-benefit analysis, and advanced statistical analysis.

Required courses for this area include EPI 200, *Principles of Epidemiology*; BIO 219ab, *Statistical Methods for HPM*; BIO 225c, *Multiple Regression Analysis for HPM*; HPM 206ab, *Economic Analysis*; HPB 280b, *Decision Analysis for Health and Medical Practices*; HPM 286s, *Decision Analysis in Clinical Research*; HPB 282d, *Cost-Effectiveness and Cost-Benefit Analysis for Health Program Evaluation*; a course in both environmental health and health and social behavior; and HPM 290abcd, *Applied Research and Practice in HPM* or HPM 287abcd, *Research Seminar on Risk and Decision Analysis*. Recommended elective courses include those on survey research, epidemiologic research, economic analysis, financial analysis, and quality assessment.

Master of Science in Health Policy and Management (two-semester program)

The two-semester SM program is designed for students pursuing research careers in public or private sector health care institutions, particularly for physicians (and other candidates with relevant advanced degrees) who desire an intensive exposure to analytic and quantitative skills. The degree is appropriate for students interested in either domestic or international research questions. Recent graduates have taken research positions at academic medical centers and other health care organizations.

MELITTA JAKAB

Master's student, Department of Health Policy and Management

Melitta Jakab takes a macro view of life. "I look at national-level health

policy as an instrument in the fight against poverty," says this native of Budapest, Hungary, who worked for two years at the World Bank's regional office for Central and Eastern Europe before coming to HSPH.

"I was looking for something bigger than how to maximize profits," Jakab says. "Rather, I want to alleviate poverty. Poverty is both a cause and a result of illness. Ill people tend to fall into poverty, and poor people tend to be ill."

To ensure that the poor have access to the services they need, says Jakab, "I need to understand how health care finance and delivery systems work at the country level. We need to create evaluative methods that allow us to measure the performance of those systems."

Jakab plans to return to Hungary after graduation, "to work in health policy with the government, and to apply my skills on the international level, possibly with the World Bank."

Applicants should hold graduate medical or other professional degrees and have significant experience in health services. They typically expect to devote a substantial portion of their careers to research, particularly in areas such as health services research, cost-effectiveness analysis, and clinical decision-making.

Required courses for the degree include BIO 200 or 201ab, introductory biostatistics, or BIO 206st, *Statistical Principles in Medical Research*; EPI 200 or 201a, introductory epidemiology, or EPI 208st, *Introduction to Clinical Epidemiology*; up to 10 tutorial credits; and an additional 10 credits in courses within the department. Recommended electives include upper-level courses in biostatistics, epidemiology, health economics, health services research, health decision sciences, quality improvement, technology assessment, and program evaluation.

Doctor of Science in Health Policy and Management

The SD program in Health Policy and Management is designed for physicians and lawyers who are interested in doctoral-level research training in health policy, and who are committed to applied, interdisciplinary research. The program prepares graduates to perform research in the academic or professional realm.

Candidates complete a set of required courses in epidemiology, biostatistics, decision science, economics, program evaluation, political analysis, public health law (lawyers only), and health and social behavior. In addition, each student works closely with a faculty advisor to develop an individual plan of study. While students in this program have the opportunity to take courses throughout the university, all required courses are offered through HSPH. Candidates normally complete two academic years of study in residence at HSPH, pass a written departmental general examination and an oral qualifying examination, and complete, defend, and submit a thesis for publication. The doctoral thesis, advised by a faculty committee of three or more members, is normally comprised of three publishable papers.

Applicants must hold an MD, JD, or other terminal professional degree. In addition, applicants should have a strong aptitude in a quantitative discipline (demonstrated by prior academic performance, work experience, and standardized test scores from the GRE, MCAT, or LSAT), experience in the health sector, and the ability to perform original and independent work. Applicants should indicate their anticipated area of concentration within the department and anticipated faculty mentor (if known) in their application essay.

Doctor of Philosophy in Health Policy

The PhD in Health Policy, awarded by the Faculty of Arts and Sciences, is designed for students seeking teaching careers in institutions of higher learning (schools of public health, public policy, and medicine) and/or research careers in health policy. It is a collaborative program of four Harvard University faculties: the Graduate School of Arts and Sci-

ences, the School of Public Health, the Medical School, and the John F. Kennedy School of Government. Because this is an interfaculty program, enrolled students take courses throughout the university.

Students select one of the following six concentrations within health policy: decision science, economics, ethics, organizational behavior, political analysis, or statistics and evaluative science. In addition, at the dissertation stage, students specialize in one of four policy areas: environmental health, health care services, mental health, or public health.

Applicants must take the GRE, MCAT, or GMAT. In addition, applicants whose native language is not English must take the TOEFL.

Application materials must be obtained from the Graduate School of Arts and Sciences at 8 Garden Street, Cambridge, MA 02138 (phone: 617-495-5315).

Part-Time Master's Degree Program in Health Care Management for Physicians

The department is establishing a part-time nonresidential program for physicians seeking a graduate degree in management through courses offered in three-week summer sessions, structured distance learning experiences, periodic extended weekend sessions during the academic year, and a field practicum. The degree requirements take two years to complete, including two summers. The objective of the program is to train physicians in the skills of management while they maintain full-time jobs in the health care sector. The program targets clinicians who seek greater managerial involvement or desire to be more effective in existing managerial responsibilities. The program is targeted to those in positions such as medical director, clinical department chief, or chief executive officer of a health care organization. The deadline for applications is January 4, 1999, for matriculation in July of 1999.

For more information about the PhD program, including financial aid, please contact Joan P. Curhan, Director, PhD Program in Health Policy, 79 John F. Kennedy Street, Cambridge, MA 02138.

Phone: 617-496-5412

Fax: 617-496-9053d

E-mail: Joan_Curhan@harvard.edu

Jack Needleman, MA (Syracuse University), PhD (Harvard University); Assistant Professor of Economics and Health Policy. Health economics and health policy; econometrics; research design and evaluation; applied policy analysis; management of the policy process; hospital finance.

Peter J. Neumann, MA (University of Pennsylvania), SD (Harvard University); Assistant Professor of Policy and Decision Sciences. Cost-effectiveness analysis in health and medicine, pharmacoeconomics, medical technology assessment, and federal and state health policy on pharmaceuticals and medical technology.

Joseph P. Newhouse, PhD (Harvard University); John D. MacArthur Professor of Health Policy and Management in the Faculties of Medicine, Government, Public Health, and Arts and Sciences; Director of the Harvard University Division of Health Policy Research and Education; and Chair of the Committee on Higher Degrees in Health Policy. Financing and organization of medical care; medical malpractice; manpower policy; outcome research.

R. Heather Palmer, MB, BCh (Cambridge University), SM (Harvard University); Lecturer on Health Services and Director of the Center for Quality of Care Research and Education. Quality of health care; incorporation of evaluation measures into health care reform plans.

Deborah B. Prothrow-Stith, MD (Harvard University); Professor of Public Health Practice and Associate Dean for Faculty Development. Community-based violence prevention; violence prevention protocols for primary care settings.

Lorenz R. Rhomberg, PhD (State University of New York at Stony Brook); Assistant Professor of Risk Assessment (Health Policy and Management and Environmental Health). Critical analysis of the methods and procedures of human risk assessment, especially quantitative methods for putative carcinogens.

Marc J. Roberts, PhD (Harvard University); Professor of Political Economy. Health policy; environmental policy; ethical aspects of allocating scarce public health resources.

Katherine Swartz, MS, PhD (University of Wisconsin); Associate Professor of Health Policy and Management. Analyzing populations without health insurance; developing policies to finance universal health insurance; structures of financial incentives for physicians.

Alvin R. Tarlov, MD (University of Chicago); Professor of Health Promotion. Health outcomes assessment in individuals and population groups.

Kimberly M. Thompson, MS (Massachusetts Institute of Technology), SD (Harvard University); Assistant Professor of Risk Analysis and Decision Science. Analysis of the risks, costs, and benefits of using airbags as life-saving devices; applications of value of information (VOI) techniques to environmental health decisions; regulatory developments in the dry cleaning and pulp and paper industries; variability in the dispersion of pollutants with respect to the distribution of population surrounding the source.

Milton C. Weinstein, AM, MPP, PhD (Harvard University); Henry J. Kaiser Professor of Health Policy and Management (Health Policy and Management and Biostatistics); Professor of Medicine, Harvard Medical School. Cost-effectiveness of health practices and technologies.

The following faculty members have secondary appointments at HSPH. Their primary affiliation is with Harvard Medical School.

Donald M. Berwick, MPP, MD; Associate Professor in the Department of Health Policy and Management. Health care quality assessment, management, and improvement; technology assessment and cost-effectiveness analysis; decision analysis and clinical epidemiology; preventive medicine and clinical preventive practice.

Deborah J. Cotton, MD (Boston University), MPH (Johns Hopkins University); Associate Professor in the Department of Health Policy and Management. Clinical epidemiology of HIV infection; HIV/AIDS in women; health science policy related to HIV/AIDS clinical research.

Postdoctoral Fellowships in Health Policy and Management

The Department of Health Policy and Management offers two-year postdoctoral fellowships to physicians, dentists, and nurses who have earned a PhD, who wish to do independent research in such areas as quality of medical care, technology assessment and cost-effectiveness, health care policy, management of health care organizations, and AIDS policy. The program emphasizes methodology in evaluation research, decision science, economics, and organizational analysis, and permits fellows to design individualized programs of study. Fellows may also apply for admission to a formal degree program.

Candidates must hold an MD, DDS, or equivalent degree, and must be US citizens or permanent residents. Applicants must submit a curriculum vitae, three letters of reference, and a statement describing career goals, research interests, and reasons for applying. The application deadline is November 6, 1998, for a fellowship beginning in July, 1999. For more information, contact Kristine L. Forsgard in the Department of Health Policy and Management.

Courses Offered by the Department of Health Policy and Management, 1998-99

Please note that this list may be incomplete and is subject to change. Detailed course listings, including information about prerequisites, course activities, and scheduling, are distributed to students with registration information.

Letters following course numbers indicate the period(s) in which a course is given: a and b (fall quarters); c and d (spring quarters); e and f (one-week sessions in January and March); s and t (1999 summer sessions).

HPM 201b. Pharmacoeconomics and the Economic Evaluation of Medical Technology (Neumann)
Examines key issues in the use of economic information for the evaluation of pharmaceuticals and other medical technologies. Emphasizes applications of analytic techniques in a variety of disease areas and discusses the FDA's role, and the use of pharmacoeconomic information in coverage and reimbursement decisions by managed care plans. (2.5 credits)

HPM 202s. The Role of the Physician Manager in Health Care (T. Lee, Mort)

Examines the major managerial roles for physicians in the arena of health care delivery. Topics include market forces, quality improvement and re-engineering in an acute care hospital, building an integrated delivery system, the changing role of payers, guideline development and implementation, and medical management under capitation. (2.5 credits)

HPM 204s. Research Synthesis and Meta-Analysis Applications in Public Health and Clinical Medicine (Laird, Stoto)

Reviews the principles of meta-analytic statistical methods, which use existing data to inform clinical decision making and health care policy. Explores the applications of these methods to data sets (2.5 credits)

HPM 205ab. Economic Analysis for Public Health (Roberts)

Introduces basic principles of economics and economic analysis, particularly as they apply to public health. Covers such aspects of microeconomic theory as determinants of supply and demand, the theory of markets, economic efficiency, and other topics in health care economics. (5 credits)

HPM 206ab. Economic Analysis

Brings students to an intermediate-level understanding of microeconomic theory. Emphasizes the uses and limitations of the economic approach. (5 credits)

HPM 207ab. Econometrics for Health Policy (Yip)

Provides students with an understanding of econometric concepts and methods used in health policy research. Special attention is given to modeling and model specification issues. (5 credits)

HPM 208cd. Health Care Regulation and Planning (Swartz)

Examines issues for US health care reform: insurance, financing, cost-control methods, incentives for hospitals and physicians, quality of care, long-term care, competitive versus regulatory approaches, and the roles of government and the private sector. (5 credits)

HPM 209s. The Economics of Health Policy (Ettner)

Teaches the analysis of health policy issues through the application of basic economic principles. Topics include health insurance, the role of taxation and regulation in promoting public health, hospital mergers, an overview of cost-effectiveness analysis, implications of the growth in for-profit health care providers, and health care reform. Previous economics training is not required. (2.5 credits)

HPM 210d. Medical Malpractice and Risk Management (Chirba-Martin, Brennan)

Focuses on the development, implementation, and evaluation of risk management programs and legislative reforms in patient compensation plans. Emphasizes the relationships among quality of care

standards, quality assurance, malpractice vulnerability, and risk management programs. (2.5 credits)

HPM 211abcd. New Developments in Health Law (Brennan, Chirba-Martin, Studdert)

Explores recent developments in legal issues pertaining to public health, focusing on topical decisions, bills being debated in Congress, newly enacted statutes, issues related to medical ethics, and developments in corporate and antitrust law. (1.25 credits)

HPM 212ab. Program Evaluation in Health Policy (Needleman)

Examines issues in health program evaluation, with an emphasis on accuracy, relevance, and credibility of findings. Topics include establishing the scope of an evaluation, data and measurement issues, inference, and presenting and applying findings. (5 credits)

HPM 213b. Law and Public Health I (Parmet, Studdert)

Explores the relationship between US constitutional protections of individual rights, and the need to use the police power of the state to address public health problems. Includes emphasis on the HIV epidemic and an overview of international legal issues. (2.5 credits)

HPM 214c. Law and Public Health II: American Health Care (P. Green, Hyams, Studdert)

Focuses on the legal oversight of the US health care system. Contrasts regulation of provider activity with market-based approaches and examines the effects of tort law on provider behavior and alternatives to traditional legal structures. (2.5 credits)

HPM 217cd. Law, Economics, and Ethics of Health Care (Brennan)

Provides an overview of the law of health care institutions, emphasizing recent developments. Topics include new payment methods and insurance forms, antitrust litigation, rationing mechanisms, and the role of health plan purchasing cooperatives in the future of medical care. (5 credits)

HPM 219a. Financial Transactions and Analysis (Kane)

Introduces concepts of financial accounting for the non-accountant user of financial information. Focuses on basic accounting transactions, statement preparation, accrual accounting, accounting for capital, and financial analysis in a variety of health care organizations. (2.5 credits)

HPM 220b. Financial Management and Control (Siegrist)

Introduces cost accounting and management control concepts and their uses in health service organizations. Topics include cost accounting, management control structure and process, responsibility accounting, budgeting, reporting, and variance analysis. (2.5 credits)

HPM 221ab. Management in Public Health in Industrialized Countries (Roberts)

Explores the management of health delivery organizations in industrialized countries. Topics include organizational issues, financial management, cost accounting, management control systems, and institutional strategy. (5 credits)

HPM 221s. Management in Public Health in Industrialized Countries I (Roberts)

Presents the first part of an introduction to the management of health delivery organizations in industrialized countries. Topics include the nature and functions of managerial work, organizational strategy and marketing, and an introduction to management cost accounting and control. (2.5 credits)

HPM 221t. Management in Public Health in Industrialized Countries II (Roberts)

Presents the second half of an introduction to the management of health delivery organizations in industrialized countries. Topics include managing human resources, organizing production, and applying ideas from total quality management to improve organizational effectiveness. (2.5 credits)

HPM 222d. Financial Management of Health Care Organizations (Puhly)

Continues the study of financial management begun in previous courses, focusing on a range of health care organizations. Topics include financial management of working capital, investment decision models, long-term capital structure, and mergers and acquisitions of health care organizations. (2.5 credits)

HPM 224c. Analyzing National Health Policy: An International Comparative Perspective (Roberts, Donelan, Koeck)

Provides students with the skills needed to analyze proposed changes to an industrialized country's national health policies. Examines questions facing countries that relate to the control of technology, hospital investment, the supply and distribution of physicians, access to care, and the role of prevention in the financing of health care. (2.5 credits)

HPM 225d. Legal and Ethical Issues in the AIDS Epidemic (Lazzarini)

Examines the legal and ethical issues raised by the HIV/AIDS epidemic, including ways that social issues, such as discrimination, have influenced the epidemic, and the relative roles of voluntarism and coercion in public health strategies. Other topics include the shift in epidemiology as HIV/AIDS affects increasing numbers of women, children, and minorities and the design of prevention programs in an imperfect world. (1.25 credits)

HPC 226cd. Urban Violence in America (Prothrow-Stith, Earls)

Examines the causes and possible remedies for the increase of urban violence in the US from an interdisciplinary perspective. (2.5 credits)

John R. Delfs, MD (Harvard University); Assistant Professor in the Department of Health Policy and Management. Aging and long-term care policy; impact of structure and organization on health services delivery.

Robert A. Dorwart, SM (Harvard University), MD, MPH (Tulane University); Professor in the Department of Health Policy and Management. Organization and financing of care; practice patterns, quality of care, and administration.

Robert A. Greenes, MD, PhD (Harvard University); Professor in the Department of Health Policy and Management. Medical informatics; design and development of a modular approach to knowledge management; facilitating integration of the work of multiple contributors.

John Hedley-Whyte, MB, BChir, MA, MD (Cambridge University); Professor in the Department of Health Policy and Management. Standards for medical equipment and services.

Matthew H. Liang, MD, MPH (Harvard University); Professor in the Department of Health Policy and Management. Epidemiology of rheumatic disease and disability; clinimetrics; health services research; technology assessment.

Richard F. Mollica, MD (University of New Mexico), MAR (Yale University); Associate Professor in the Department of Health Policy and Management. Survey instruments for traumatized populations; cross-cultural psychiatry and psychiatric epidemiology; international health policy.

Adjunct Faculty

S. Philip Caper, MS, MD; Chairman, CEO, and President, The Codman Research Group, Inc.

Mark G. Field, AM, PhD; Professor of Sociology, Emeritus, Boston University.

Kenneth A. Freedberg, MD, SM; Associate Professor of Biostatistics and Epidemiology, Boston University School of Public Health.

Pamela S. Green, JD; private consultant on health law and policy.

Sheldon Greenfield, MD; Professor of Medicine, Tufts University.

Dean M. Hashimoto, MS, MD, JD, MOH; Staff Physician, Occupational Medicine Clinic, Massachusetts General Hospital.

Maria G. M. Hunink, MD, PhD; Associate Professor, University of Groningen, The Netherlands.

Andrew L. Hyams, JD, MPH; Senior Policy Associate, Urban Health Institute, Boston Department of Health and Hospitals.

Magnus G. Johannesson, PhD; Associate Professor, Stockholm School of Economics.

Sherrie H. Kaplan, MPH, MSPH, MS, PhD; Adjunct Associate Professor of Medicine, Tufts University School of Medicine.

Christian M. Koeck, MD, MPH, SM, SD; Executive Vice President, Vienna City Hospital Association, and Chair, Department of Organizational Development.

Zita Lazzarini, MPH, JD; private consultant.

Lucian L. Leape, MD; Adjunct Professor of Health Policy in the Faculty of Public Health.

George D. Lundberg II, MD, MS, ScD; Editor, *Journal of the American Medical Association*.

Daniel D. Moriarty, MBA; Vice President, Information Systems Group, John Snow, Inc.

George B. Moseley III, MBA, JD; Instructor, University Seminar Center.

Benjamin W. Moulton, MPH, JD; Executive Director, American Society of Law, Medicine and Ethics.

Jeremy J. Nobel, MD, MPH, SM; Medical Director, G.T.E. Laboratories.

John A. Norris, JD, MBA; President and CEO of John A. Norris, Esquire, PC, a law and public affairs/relations consulting firm.

James L.J. Nuzzo, Managing Partner, The Colchester Group.

Wendy E. Parmet, JD; Professor of Law, Northeastern University.

Joseph S. Pliskin, SM, PhD; Sidney Liswood Professor of Health Care Management, Ben-Gurion University.

Dorothy E. Puhy, MBA; Chief Financial Officer and Assistant Treasurer, Dana-Farber Cancer Institute.

Howard Rivenson, MBA; Chief Financial Officer, East Boston Neighborhood Health Center.

HPM 227cd. The Economics of Health Policy (Newhouse)

Considers policy issues related to Medicare reimbursement, malpractice, the aggregate number and distribution of physicians, and the demand for medical care services and insurance. (5 credits)

HPM 228cd. Introduction to the New American Health Care System: Law, Policy, and Management (Moseley)

Examines the organizations, structures, and relationships intrinsic to the US health care system's reformation. Identifies the key delivery entities (HMOs, PPOs, MSOs, IPAs, PHOs, and more) and their purposes, advantages, and disadvantages in the context of strategies being implemented by doctors, hospitals, insurers, and employers. Also examined are the influences of federal and state government agencies. (2.5 credits)

HPM 230cd. Managing People in Health Care Organizations (Moseley)

Explains the basic systems and strategies for managing human resources in health care delivery organizations, including principles of recruitment, management, and supervision. Stresses the role of labor unions, management of staff relations, and downsizing. (5 credits)

HPM 231c. Competitive Strategy Determination (Moriarty)

Focuses on the conceptual framework needed to plan for the long-term viability of health care organizations. Students learn to appreciate the concepts of competitive strategy and competitive advantage and gain the tools and skills to formulate and evaluate organizational strategy. (2.5 credits)

HPM 232c. Operations Management in Service Delivery Organizations (Pliskin)

Examines the role of operations in an organization. Topics include process and capacity analyses, types of processes, productivity, quality standards, and operating strategy. (2.5 credits)

HPM 233d. Strategic Marketing Management in Health Systems (Wasek)

Examines marketing within a strategic framework across the public and private sectors, domestic and international health systems, and social marketing contexts. Marketing management, research, and strategy techniques are discussed and applied to program design, business planning, and implementation issues. (2.5 credits)

HPM 235b. Policy Issues in Managed Care: Policy and Public Management Issues (Turnbull)

Examines the concepts, programs, and policy of managed care in the context of current health care reform proposals at state and national levels. Focuses on forms that managed care products take and their intended achievements, the ways these forms are viewed by the market, and their effect on costs, health outcomes, and buyer satisfaction. The

prospect of using managed care to control national health spending and to improve access and quality of care is also discussed. (2.5 credits)

HPM 238c. Strategic Use of Information Systems in Health Care Delivery (Nobel)

Explores information systems from the perspectives of providers, payers, and consumers. Topics include computerized patient records, repository databases, clinical decision support systems, and interactive multimedia communications. (1.25 credits)

HPM 239bcd. Applied Financial Analysis of Health Care Organizations (Kane)

Builds skills by assigning students a set of health care organization financial statements to analyze as a group before breaking into smaller groups to pursue student-defined financial-research questions. (3.75 credits)

ID 240c. Principles of Injury Control (Hemenway)

Introduces the problem of intentional and unintentional injury, including motor vehicle crashes, fires, and violence. Examines control options, methods for evaluating prevention programs, and determination of the optimal combination of countermeasures. (2.5 credits)

HPM 241ab. Health Care in the US: System, Policy, and Comparative Perspectives

Examines the organization of the US health care system, the current policy debate about health care reform, and ways in which health care systems of other industrialized nations provide insight into the US experience. (5 credits)

HPC 242c. Politics and Strategies for Change in Health Policy (Blendon)

Focuses on development of strategies to influence public policy in order to improve the health of populations. Topics include the politics of health care, political strategy, lobbying and interest groups, the media and public opinion, campaigns, the effects of campaigns and elections on health care policy, coalition building, and grass roots advocacy. (2.5 credits)

HPM 243c. Health Economics: Economic Analysis of the Health Care System (Hsiao)

Introduces health economics, the use of economic analysis to examine major health care financing and delivery issues, and the development of policies and programs designed to address them. Topics include financing, access, utilization, cost control, market structure, and national health plans. (2.5 credits)

HPM 244d. Pharmaceutical and Biotechnology Industries: Public Policy and Regulatory Issues (Norris)

Analyzes public policy and legal issues in the pharmaceutical and biotechnology industries, stressing research and development of new biomedical products. Examines regulatory programs for new product development, the ethics of clinical investigation, and conflicts of interest. (1.25 credits)

HPM 245d. Public Health Leadership Skills (Prothrow-Stith, Marcus)

Provides students with concrete skills needed to lead health agencies. Topics include public speaking, articulation of goals, negotiation, budget development, and constituency building. (2.5 credits)

HPM 246abcd. Seminar In Health Policy (Newhouse, Cutler, Frank)

Covers the financing and organization of health care, medical manpower, medical malpractice, technology assessment, prevention, mental health, long-term care, and quality of care. (10 credits)

HPM 247cd. Political Analysis and Strategy for US Health Policy (Blendon)

Analyzes the politics of major health policy development in the US and provides skills for developing strategies to influence policy outcomes. Topics include the influence of the press, pollsters, and political institutions on health policy, and the health politics environment in different countries. (5 credits)

HPM 249cd. Development of Federal Health Policy (Nuzzo)

Discusses the interplay of forces, both internal and external to government, which influence federal health policy decisions. Describes the actors and the policy development process. Develops skills in policy analysis, writing of memoranda, and government relations. (2.5 credits)

ID 250. Ethical Basis of the Practice of Public Health**ID250a. (Roberts, Reich)****ID250b. (Roberts)**

Provides a broad overview of the main philosophical and moral ideas that are used to resolve debates of public health policy. Helps students develop the capacity to analyze, criticize, evaluate, and construct policy-oriented arguments. (2.5 credits)

ID 251s. Ethical Basis of the Practice of Public Health: Health Care Delivery (Brennan)

Emphasizes US health care policy and modern medical ethics to explore the political theory of medical care. Helps health professionals understand the manner in which political economy and ethics interact in health care policy decisions. (2.5 credits)

HPM 253t. Quality Improvement in Health Care (Bisognano, Berwick)

Explores theoretical and practical methods for improving health care systems by presenting clinical cases, organizational lessons, interactive learning modules, and site visits to health care settings. (2.5 credits)

HPM 254cd. Use of Patient-Based Assessments in Outcomes Research (Tarlov, J.E. Ware, Kosinski, Harris, Keller, Lerner, Taira, Manocchia)

Provides research experience in the use of a large data set. Students choose from three options: 1) functional health outcomes of medical care; 2) measurement and assessment of primary care character-

istics; 3) the influence of work on health, and of health on work. Students complete independent research projects including analyses and a paper with interpretation of results, policy relevance, and conclusions. Didactic sessions cover scale construction, reliability, validity, data collection, interpretation, and analytic issues. (5 credits)

HPM 255d. Payment Systems (Kane)

Examines issues related to third-party reimbursement for health care institutions and individual providers. Issues include cost containment efforts, provider and policy perspectives, and managed care. (2.5 credits)

HPM 256c. Clinical Quality Measurement for Quality Improvement (Palmer, Lawthers, L. Peterson)

Introduces the terminology, concepts, methods, and strategies for clinical quality measurement in a variety of health care environments. Takes a rigorous analytic approach using epidemiologic methods. (2.5 credits)

HPM 257c. Use of Outcomes and Patient Satisfaction in Assessing Quality of Care (Greenfield, Kaplan)

Explores the principles and issues involved in using outcomes of care and patient satisfaction in evaluating quality of care, including an assessment of the major instruments and methods currently available. Topics include the relationship of process to outcome; the impact of setting on how outcomes are used; difference between the reporting, rating, and participating functions of the patient; and the role of provider satisfaction in outcome. (2.5 credits)

HPM 258d. Physician Performance (Leape)

Examines factors influencing physician practice, including training, experience, organizational setting, financial incentives, and patient preferences. Considers strategies for changing physician behavior, such as education, feedback, guideline development, and utilization management. (2.5 credits)

HPM 259. Quality Management in Health Care**HPM 259d. (Blumenthal, Bohmer)****HPM 259t. (Lee, Bohmer)**

Introduces the concepts and tools of total quality management and their applications to health care. Reviews the data needs of quality management, the implications for information system planning, and the relationship between national health care policy as it relates to quality. (2.5 credits)

HPM 262c. How to Write, Review, and Publish Articles on Medicine and Health Policy (Lundberg, Donelan)

Teaches students to prepare, peer review, and revise articles for publication, while providing an overview of current health policy controversies. (2.5 credits)

Richard B. Siegrist, Jr., MS, MBA; Vice President and Chief Financial Officer of Transition Systems, Inc.

Nancy C. Turnbull, MBA; private consultant

Glenn K. Wasek, SM; Vice President and Director, Marketing Group, John Snow, Inc.

HPM 266c. Seminar on Refugee Trauma and Human Development (Mollica, Lavelle, Allden)

Focuses on the public health problems of highly traumatized refugee populations. Provides a comprehensive overview of the international approach, theoretical models, and public health strategies for dealing with refugee crises. (1.25 credits)

HPM 267d. Health and Medical Care in an Aging Population

Introduces the public health and public policy implications of an aging population. Topics include the demography, epidemiology, and politics of aging; delivery and financing of health care for older populations; ethical issues in health policy; and quality of care measurement of innovative treatments and delivery systems. (2.5 credits)

HPP 268c. Financing Health Care in Developing Countries (Hsiao, Berman)

Provides an introduction to public and private financing of health care in developing countries. Analyzes economic considerations in alternative approaches to financing, reviews formal perspectives of economic theory, and assesses links between stages of national development and health care financing. (2.5 credits)

HPM 269b. Comparative Health Systems of Industrialized Societies (Field)

Undertakes a comparative examination of the health systems of industrial and urban societies in order to provide an understanding of shared features and critical differences. (2.5 credits) Not offered 1998-99.

HPM 270a. Mental Health Policy in the US (Dorwart, Hermann)

Examines the historical development and current status of policy issues relevant to mental health services in the US. Topics include deinstitutionalization of mental hospitals, privatization of psychiatric services, the role of federally funded community mental health centers, and the organization and financing of state mental health agencies. (2.5 credits)

HPM 271e. Overview of Domestic Violence (Prothrow-Stith, Isaac)

Covers the epidemiology of domestic violence, dynamics of abusive relationships, responses of the criminal justice and health care sectors, the role of the shelter and advocacy communities, relationships with other forms of violence, and strategies for primary prevention. (1.25 credits)

HPM 273a. Policy and Management Challenges in Public Health Practice (Prothrow-Stith, Kennedy)

Examines the theories and practice of leadership in public health. Focuses on the management, health policy, and interpersonal difficulties that can arise in leadership positions, and strategies for responding. (1.25 credits)

HPM 274abcd. Oral Health Policy Research Seminar (Douglass)

Concentrates in the fall term on the research methods of current national studies of the need, supply, demand, and cost of dental care. The spring term emphasizes research work on relevant dental care policy subjects. (5 credits)

HPM 275ab. Dental Public Health and the Dental Care Delivery System (Douglass)

Reviews basic concepts in dental public health and dental care delivery systems in the US and elsewhere. Examines issues of utilization of services, need versus demand for dental care, methods of quality assurance, and the role of government agencies in the provision and regulation of care. (2.5 credits)

HPM 276s. Methods and Applications in Health Services Research (Epstein, Komaroff)

Covers the methodology and application of health services research. Topics include research design, analyses of large databases, cost-effectiveness analyses, survey methodology, assessment of health status, assessment of quality, measurement of access to care, risk adjustment, and statistical techniques of health services research. (2.5 credits)

HPM 277s. Current Issues in Health Policy (Komaroff, Epstein)

Provides an overview of the major health policy issues facing the US today. Focuses on roles of hospitals, doctors, private and government insurance, and different systems for organizing and financing care. (2.5 credits)

HPM 278d, 278f. Skills and Methods of Health Care Negotiation and Conflict Resolution (Marcus)

Presents the theory and practice of negotiation and conflict resolution with emphasis on integrating analytic skills, negotiation techniques, and conflict resolution methods into the practice of public health. (1.25 credits)

HPB 280b. Decision Analysis for Health and Medical Practices (Goldie)

Discusses the methods and applications of decision analysis, cost-effectiveness analysis, and benefit-cost analysis in health care technology assessment, medical decision making, and health resource allocation. (2.5 credits)

HPB 281c. Methods for Decision Analysis in Health Care Technology Assessment (Kuntz, Weinstein)

Covers methods and applications of decision analysis and other modeling techniques to clinical problems. Topics include Markov models, life expectancy modeling, deterministic and probabilistic sensitivity analysis, simulation models, ROC analysis and diagnostic technology assessment, quality of life valuation, multiattribute utility, and behavioral decision theory. (2.5 credits)

HPB 282d. Cost-Effectiveness and Cost-Benefit Analysis for Health Program Evaluation (Graham, Weinstein)

Covers methods and applications of cost-effectiveness analysis and includes cost-benefit analysis for health program evaluation, medical technology assessment, and environmental risk analysis. (2.5 credits)

HPE 283b. Risk and Decision Making: A Social Science Perspective (Graham, Roberts)

Explores the questions of how risks are perceived, evaluated, and managed by different groups in society. Perspectives on risk and decision making from the fields of psychology, sociology, anthropology, political science, philosophy of science, and ethics are contrasted with those arising from the literature on economics, decision theory, and management science. (2.5 credits) Not offered 1998-99.

HPE 284ab. Decision Theory (Hammitt)

Introduces the standard model of decision making under uncertainty and methodological issues created by applications to health research. Topics include von Neumann-Morgenstern and multiattribute utility theory, Bayesian statistical decision theory, stochastic dominance, the value of information, judgment under uncertainty, and elicitation and calibration of expert opinion. (5 credits)

HPE 285d. Seminar on Risk Management and Communication (Thompson, Graham)

Challenges students to evaluate the risk analysis framework as an approach to managing health, safety, and environmental hazards. Addresses contemporary issues in risk assessment, evaluation, management, and communications. (2.5 credits)

HPM 286s. Decision Analysis in Clinical Research (Weinstein)

Introduces decision analysis methods relevant to clinical decision making and clinical research, probability theory, utility theory, diagnostic test use and evaluation, and uses of decision analysis in clinical decision making and research design. (2.5 credits)

HPM 287abcd. Research Seminar on Risk and Decision Analysis (Hammitt)

Introduces students to state-of-the-art scholarship in risk analysis and decision theory. Topics include theory and techniques of risk analysis, choice under uncertainty, health policy models, cost-effectiveness analysis, and statistical decision theory. (2.5 credits)

HPM 288c. Management Science (Pliskin)

Introduces quantitative tools and methods to promote optimal use and allocation of scarce resources. Topics include linear programming, transportation, assignment, network flows, dynamic programming, queuing, and simulation. (2.5 credits)

HPM 289cd. Practicum in Decision Analysis and Cost-Effectiveness (Hammitt, Kuntz)

Enables students to design and undertake a research project in decision analysis or cost effectiveness analysis on a topic of their choice. (2.5 credits)

**HPM 290ab, 290cd. Applied Research and Practice in Health Policy and Management**

Teaches students to apply analytic and managerial methods to concrete problems. Each student carries out a research project, conducts a policy analysis, or performs a management study on behalf of an individual or institutional sponsor. (5 credits)

HPM 291cd. Applied Research in the Law of Health Policy and Management (Brennan)

Allows students in the Law and Public Health concentration of the MPH degree program to apply analytic skills to a practical problem. Students carry out a research project, perform a policy analysis, or conduct a managerial study on behalf of an individual or institutional sponsor. (5 credits)

HPM 292d. Research Ethics (Brennan)

Reviews ethical issues that arise in the conduct of research. Topics include informed consent, disclosure of conflicts of interest, multiple authorship, issues in mentoring (including gender and race-based discrimination), and federal oversight. Required for all students engaged in studies supported by the National Institutes of Health. (1.25 credits)

David Hemenway, professor of health policy, earned his eighth citation by the student body for his excellence in teaching during the 1997-98 academic year.

HPM 293d. Surveys for Health Policy (Donelan, Blendon)

Gives students experience in designing, conducting, analyzing, and reporting results of surveys relevant to health policy issues. Topics include defining issues, contracting with survey organizations, collecting objective and subjective data, sampling specialized populations, and presenting data in useful form. (2.5 credits)

HPM 294b. Methodology Issues in Health Services Research (Kaplan)

Emphasizes the array of methods available to health services researchers, their disciplinary origins, underlying assumptions, and strengths and weaknesses. (2.5 credits)

HPM 296cd. Doctoral Seminar in Health Economics (Newhouse, Cutler, Ellis)

Explores frontier work in the field of health economics. Focuses on advanced theories and economic models useful for policy analysis, and on development of research topics. (2.5 credits)

HPM 297cd. Public Opinion, Polling, and Public Policy (Blendon)

Explores the uses of public opinion polling in public policy decision making and media reporting. Students analyze and evaluate existing opinion surveys, design polling questions, and interpret public opinion results. (5 credits)

HPM 298d. Tobacco and Public Health (Brennan, Chirba-Martin)

Offers an interdisciplinary examination of the events leading up to the latest phase of the tobacco wars, namely FDA nicotine regulation and the recently proposed global settlement. Examines the ways the tools of economics, epidemiology, health and social behavior, politics, law and regulation have been used and misused in addressing tobacco's impact on public health. Topics include the tensions between private rights and public interests and the appropriate role and limitations of the government in promoting public health. (2.5 credits)

HPE 299d. Analytical Methods in Risk and Decision Sciences (Thompson)

Covers advanced methods for modeling and synthesizing information for analysis of health decision problems. Builds analytical and computational skills (with emphasis on simulation and uncertainty analysis) through the application of theory to real health and safety problems, both environmental and medical. (2.5 credits)

HPM 504b. Strategies for Managing Variable Patient Demand in Health Care Settings (Kane, Litvak, Long)

Introduces a wide range of scenarios in which variable patient-demand needs to be managed to reduce costs while maintaining or improving quality of care. Students will be introduced to the quantitative techniques and logical methodology of solving these problems in different hospital departments. (1.25 credits)

Independent Study, Field Experience

Individual students or small groups of students who wish to go beyond the content of regularly scheduled courses may arrange with individual faculty members to participate in departmental research, undertake specialized readings, perform field projects, or carry out independent studies.

DEPARTMENT OF IMMUNOLOGY AND INFECTIOUS DISEASES

Research within the department emphasizes the identification of basic pathogenic mechanisms that may lead to better diagnostic tools, the development of vaccines and other immune interventions for prevention and control of infection and disease, and the identification of new targets for antiviral and antiparasite drugs. Laboratory-based research within the school may be supplemented by field-based studies of epidemiological and ecological aspects of infectious disease transmission and control. Diseases of developing countries are emphasized. Members of the department take a multidisciplinary approach to infectious diseases, which includes immunology, molecular biology, public health entomology, cell biology and ultrastructure, biochemistry, pathology, virology, epidemiology, and ecology. They undertake research both within the school and around the world.

Infectious diseases currently under study by these methods include protozoa (malaria, leishmania, ameba, giardia), helminths (schistosomes, filaria, onchocerca), viruses (HIVs, hepatitis, leukemia retroviruses, and eastern equine encephalitis), and bacteria (Lyme disease agents, ehrlichia, and tuberculosis). Further immunologic studies focus on genetic regulation of the immune response; molecular mechanisms of the regulation of class II genes; the function and regulation of T-cell-derived cytokines; and cytokines involved in the regulation of inflammation.

The department offers two Master of Science (SM) degree programs. The four-semester program is designed for candidates with strong interest and background in biological sciences who expect to pursue professional or academic careers focused on the pathogenesis, transmission, or control of infectious diseases. Applicants must hold a bachelor's degree, but may also enter at any level of advanced training. The two-semester program is designed for students with a prior professional doctoral degree who have an interest in biological sciences in public health as they pertain to infectious diseases.

The Department of Immunology and Infectious Diseases focuses on the biological, immunological, epidemiological,

and ecological aspects of viral, bacterial, protozoan, and helminthic diseases of animals and humans and the vectors that transmit some of these infectious agents.

In addition, the department also offers two doctoral degree programs. The program leading to the Doctor of Science (SD) degree in immunology and infectious diseases is designed for candidates holding a clinical degree (MD, DVM, DMD, or equivalent) and interested in immunology and infectious diseases. The Doctor of Philosophy (PhD) program is designed for all other candidates, who enter through the Biological Sciences in Public Health Program (a component of the Division of Medical Sciences, Graduate School of Arts and Sciences).

Students in the various degree programs choose among the following areas of interest, as indicated.

For more information about the SD program in Immunology and Infectious Diseases or other departmental inquiries, please contact Sarah Thomforde, Department of Immunology and Infectious Diseases, 651 Huntington Avenue, Boston, MA 02115.

Phone: 617-432-2334

Fax: 617-739-8348

For application materials and information about admission to the PhD program, please contact the Admissions Office, Division of Medical Sciences, Harvard Medical School, 260 Longwood Avenue, Room 435, Boston, MA 02115.

Phone: 617-432-0162

Applicants who have specific questions about the PhD program may contact Ruth Kenworthy, Administrator, Division of Biological Sciences, 665 Huntington Avenue, Boston, MA 02115.

Phone: 617-432-4470

Fax: 617-432-4098

E-mail:

kenworthy@cvtlab.harvard.edu

Faculty

Department Chair: Myron E. (Max) Essex, DVM, SM (Michigan State University), PhD (University of California, Davis); **John LaPorte** Given Professor of Immunology and Infectious Diseases and Chairman of the Harvard AIDS Institute. Role of retroviruses as infectious agents in human leukemias and AIDS; mechanisms of immunosuppression by retroviruses; identification and characterization of retroviral proteins for seroepidemiological and diagnostic value and for vaccine development; hepatitis B virus and human liver cancer.

Barry R. Bloom, PhD (Rockefeller University); Professor of Immunology and Infectious Diseases and Dean of the Faculty of Public Health. Mechanisms of resistance and pathogenesis of diseases in developing countries, particularly tuberculosis and leprosy. Genetic analysis of host resistance, and development of new genetically engineered vaccines against tuberculosis. (Beginning January, 1999)

Immunology This area is designed for individuals who plan to hold positions in teaching or research in immunology. Graduates ordinarily assume positions as faculty members and research scientists at medical schools, research institutes, and schools of public health. The curriculum currently focuses on genetic regulation of the immune response, molecular mechanisms of the regulation of class II genes, and the function and regulation of T-cell-derived cytokines. Students take courses in cell biology, immunology, and molecular immunology. Most students in this area are enrolled in an SD or PhD program.

Immunology and Molecular Biology of Parasitic and Other Infections This area is designed for PhD students in the Biological Sciences in Public Health Program. It introduces students to recent advances in the biology of parasitic and infectious diseases and provides background for conducting research on these diseases. The program emphasizes molecular biology, immunology, cell biology, and the epidemiology of parasites.

Infectious Disease Epidemiology and Tropical Public Health Leading to a two-semester or four-semester SM degree or to an SD degree, this area of interest provides a solid understanding of epidemiology, ecology, and control of infectious diseases in developing countries. It emphasizes control and prevention measures, and the biological basis of diseases caused by pathogens that range from viruses to parasites. Graduates fill positions as consultants and leaders in field-based projects, international health organizations, or governmental agencies. The two-semester program provides a useful background for physicians practicing in developing countries or involved with infectious disease teaching or research.

Vector Biology, Ecology, and Control This area of interest, in which the department offers both a four-semester SM and a PhD program, focuses on the manner in which blood-feeding arthropods interact with their various vertebrate hosts and with the human pathogens that they transmit. These interests combine biological experimentation, epidemiological analysis, and population studies. Students become familiar with the various arthropods

INDU MANI

Doctoral student, Department of Immunology and Infectious Diseases

Indu Mani enjoys the fact that she works among both medical doctors and veterinarians in her department.

"Our lab marries multiple disciplines," says Mani, herself a veterinarian. "We are clinicians, but we're also scientists."

Mani is intrigued by many aspects of her research on HIV in developing countries, but says she is most curious about issues of "transmission from mom to baby. I'm interested in which viral characteristics—and which of the mother's factors, like immunology and disease status—are likely to cause transmission to the baby.

"I also find the variety of HIV subtypes extremely interesting," Mani adds. "HIV-1, for instance, has ten distinct subtypes. We are studying their various nucleotide compositions to see if their characteristics cause them to behave differently in the human body."

In the future, says Mani, "I would be interested in continuing third-world HIV research, perhaps focusing on understanding the mechanisms of transmission enough to prevent it before, during, and after birth."

that are associated with human disease and learn the ways environmental change may result in ill health. Doctoral students conduct studies on mechanisms of transmission of vector-borne pathogens, both in the laboratory and in the field, and devise novel intervention strategies.

Virology This area is designed to prepare a future generation of experts for new developments in the pathogenesis and prevention of AIDS and other infectious diseases. At present the program emphasizes the epidemiology, biology, and vaccinology of AIDS as an example of a complex infectious disease, as well as hepatitis and retrovirus-induced leukemias and neurological diseases. Students take courses in virology, vaccine development, and related fields while completing other requirements for an SD or PhD degree.

Master of Science in Immunology and Infectious Diseases (four-semester program)

Applicants must have undergraduate training in natural sciences including general biology, organic and biological chemistry, and immunology, genetics, or microbiology. Students in the four-semester SM program choose one of two areas: Vector Biology, Ecology, and Control, or Infectious Disease Epidemiology and Tropical Public Health.

In addition to meeting school-wide requirements in biostatistics and epidemiology, all SM students in the four-semester program are required to take IMI 201a, *Ecology, Epidemiology, and Control of Important Parasitic Diseases of Developing Areas*; at least 7.5 credits in parasite and vector biology (courses such as IDI 208cd, *Immunology of Infectious Diseases*; IMI 216cd, *Cellular and Molecular Biology of Parasites*; ID 201cd, *Biology, Epidemiology, Economics, and Policy (BEEP): Malaria*; or IMI 202c, *Tuberculosis*, can be taken to meet this requirement); and at least 10 credits in biochemistry, cell biology, genetics, virology, or immunology. Electives, including tutorials, are chosen based on students' career goals.

Students who plan to pursue professional careers must complete core courses in environmental health, health policy and management, and social and behavioral sciences. Students who concentrate in Vector Biology, Ecology, and Control are encouraged to register for courses in ecology and mathematical modeling. Students who concentrate in Infectious Disease Epidemiology and Tropical Public Health are encouraged to take some of the core courses of the Interdisciplinary Program in Infectious Diseases as electives.

The department does not offer funding to SM students.

Master of Science in Immunology and Infectious Diseases (two-semester program)

The two-semester program is a possible alternative to the Master of Public Health concentration in International Health for students who want to focus on biological sciences in public health. Admission to the two-semester program is restricted to applicants with a doctoral degree who need to be updated in biological sciences and methods of investigation pertaining to infectious diseases. It provides a useful background for physicians practicing in developing countries or involved with infectious disease teaching or research.

The course requirements for this program are the same as those for the four-semester program, except that only 5 credits in parasite and/or vector biology and 5 credits in biochemistry, cell biology, molecular genetics, virology, or immunology are needed to graduate. Electives and tutorials are chosen based on students' career goals. Elective laboratory rotations may be available to highly qualified students. However, not all faculty members offer laboratory-based instruction to SM students in any given year.

Doctor of Science in Immunology and Infectious Diseases

The Doctor of Science (SD) program is designed to prepare students for postdoctoral research fellowships, junior faculty positions at academic institutions, and positions in independent research institutions, in governmental agencies, and in the biotechnology industry. The program is designed for those interested in the immunology, molecular biology, virology, and epidemiology of infectious diseases. Students choose a faculty advisor whose research interests match their own to begin researching their thesis topic.

This program aims to develop the basic skills in laboratory techniques and data handling necessary for undertaking original research. Course work during the first one or two years emphasizes cellular and molecular biology, virology, immunology, and genetics. Required courses for all concentrations include school-wide requirements in epidemiology (EPI 200

John R. David, MD (University of Chicago); Richard Pearson Strong Professor of Tropical Public Health. Immunology of migration inhibitory factor (MIF); the biologic role using MIF deficient mice; the biology of parasitism, focusing on leishmania; transfer of technology from the bench to field sites (Brazil) on problems of host resistance, risk factors, therapies, and control strategies.

Laurie H. Glimcher, MD (Harvard University); Irene Heinz Given Professor of Immunology; Professor of Medicine, Harvard Medical School. Genetic regulation of the immune response; the role of 1a (class II) major histocompatibility complex molecules and T-cell receptor proteins in T-lymphocyte activation; molecular mechanisms of regulation of the class II genes; function and regulation of the T-cell derived cytokine interleukin-4.

Michael J. Grusby, PhD (Northwestern University); Associate Professor of Molecular Immunology. Molecular and genetic analysis of cytotoxic T-lymphocyte-mediated lysis; generation of in vivo models of immune deficiency by homologous recombination in embryonic stem cells.

Donald A. Harn, Jr., AM (University of Northern Colorado), PhD (University of California, Los Angeles); Professor of Tropical Public Health; Regulation, or direction, of immune responses due to the molecular composition of particular antigens; development of synthetic peptide and DNA vaccines for parasitic diseases.

Phyllis J. Kanki, DVM (University of Minnesota), SD (Harvard University); Associate Professor of Pathobiology. Pathobiology of human and simian retroviruses, including HTLV-1, STLV-1, SIV, HIV-1, and HIV-2; characterization of the immune response to various viral antigens and their correlation to stage of infection or disease.

Tun-Hou Lee, SM, SD (Harvard University); Professor of Virology. Humoral response to retroviral infections in humans; identification of coding sequences of human retroviruses and their gene products; evaluation of the relative immunogenicity of retroviral peptides for serodiagnosis and vaccine development.

Willy F. Piessens, MD (Free University of Brussels); Professor of Tropical Public Health. Professor, Harvard Medical School. Immunology and molecular biology of filarial nematodes; pathogenesis of lymphatic filariasis and onchocerciasis; regulation of cellular and humoral immune responses to molecularly defined recombinant parasite antigens.

John C. Samuelson, MD, PhD (Harvard University); Associate Professor of Tropical Public Health. Use of molecular biological and biochemical techniques to study *Entamoeba histolytica*, the protozoan parasite that causes amebic dysentery.

Andrew Spielman, ScD (Johns Hopkins University); Professor of Tropical Public Health. Epidemiology of vector-borne disease; physiology and ecology of mosquitoes and ticks; development of infectivity of pathogens in mosquitoes and ticks.

Dyann F. Wirth, PhD (Massachusetts Institute of Technology); Professor of Tropical Public Health. Mechanisms of drug resistance in malaria, including molecular genetic analysis and field-based studies; genetic analysis of malaria transmission; analysis of gene expression; transsplicing and homologous recombination in *Leishmania enriettii* using molecular genetic techniques.

The following faculty members have secondary appointments at HSPH. Their primary affiliation is with Harvard Medical School.

Martin S. Hirsch, MD (Johns Hopkins University); Professor in the Department of Immunology and Infectious Diseases. Pathogenesis and therapy of human retrovirus and herpes virus infections.

James H. Maguire, MD, MPH (Harvard University); Associate Professor in the Department of Immunology and Infectious Diseases. Clinical features and epidemiology of parasitic diseases.

Joseph G. Sodroski, MD (Jefferson Medical College); Associate Professor in the Department of Immunology and Infectious Diseases. Human immunodeficiency virus pathogenesis; viral envelope glycoproteins and antiviral immune response.

Interdisciplinary Program in Infectious Disease

Additional doctoral-level educational and training opportunities relating to infectious diseases are available through the Interdisciplinary Program in Infectious Disease.

Students in this program fulfill the departmental requirement for doctoral students with additional coursework in biology, quantitative methods, and infectious disease. For more information on this program, see page 5.

or EPI 201a) and intermediate biostatistics (BIO 210cd or BIO 211cd or equivalent), as well as appropriate courses for one major (20 credits) and two minor fields (10 credits each). Electives are chosen according to the students' needs and interests. Courses may be taken at Harvard Medical School, the Graduate School of Arts and Sciences, and MIT, as well as at HSPH.

Students are encouraged to participate in the numerous seminar series and informal discussion groups offered on the Longwood campus. The department emphasizes publication of research results in the standard research literature, and most doctoral students publish several papers before completing the degree. Students must pass the school-wide oral qualifying examination and must complete, defend, and submit a thesis based on intensive laboratory research under the guidance of a faculty advisor in the student's area of concentration.

Doctor of Philosophy in Biological Sciences in Public Health (BPH) (Immunology and Infectious Diseases)

Students wishing to study cellular and molecular biology, immunology, virology, or physiology as they pertain to major problems in public health should apply to the Biological Sciences in Public Health program. This program offers the PhD degree through Harvard University's Graduate School of Arts and Sciences, Division of Medical Sciences, Committee on Biological Sciences in Public Health.

This PhD program is designed to train scientists in state-of-the-art concepts and methods

in immunology, immune system disorders, virology, the biology of parasites, or other important infectious diseases. The program offers a firm foundation in the basic biomedical sciences, as well as in epidemiology and biostatistics. Specific courses supplement this core, as dictated by individual research concentrations. Students in this program engage in laboratory rotations in three different research areas, to enable them to assess realistically their interest in a thesis project and to evaluate the suitability of the laboratory and the mentor. At the completion of these rotations, students select an area of concentration and a thesis research laboratory and complete the required curriculum. A qualifying examination must be passed before engaging in thesis work, and the thesis must be defended before the granting of the PhD. Some students also participate in the Master of Biomedical Science program, which is designed to offer PhD students a greater knowledge of human biology and disease.

Courses Offered by the Department of Immunology and Infectious Diseases, 1998-99

Please note that this list may be incomplete and is subject to change. Detailed course listings, including information about prerequisites, course activities, and scheduling, are distributed to students with registration information.

Letters following course numbers indicate the period(s) in which a course is given: a and b (fall quarters); c and d (spring quarters); e and f (one-week sessions in January and March); s and t (1999 summer sessions).

IMI 201a. Ecology, Epidemiology, and Control of Important Parasitic Diseases of Developing Areas (Maguire)

Introduces ecological and epidemiologic concepts basic to the control of infectious agents. Considers parasitic diseases of significance in the developing areas of the world and elucidates epidemiologic principles of vector-associated diseases. (3 credits)

ID 201cd. Biology, Epidemiology, Economics, and Policy (BEEP): Malaria (Spielman)

Exposes students to vector control, diagnosis, chemotherapy, and vaccines for malaria from the point of view of social, political, and economic policy. Evaluates the impact of programs from an international and local perspective using techniques from social and biomedical sciences. (2.5 credits)

TMI 202c. Tuberculosis (Piessens, Nardell)

Covers the immunobiology, aerobiology, and molecular aspects of tuberculosis that underlie diagnostic and control strategies. Includes discussions of the impact of HIV/AIDS, and drug resistance on tuberculosis control and prevention. (2.5 credits)

IMI 203ab. Survey of Immunobiology (Grusby)

Examines the anatomy and physiology of the immune system, fate of antigen, cell trafficking, cellular interactions, and regulation of the immune response, and B and T cell recognition mechanisms. Principles of immunoregulation are discussed in the context of current literature. (5 credits) Not offered 1998–99.

IMI 205c. Clinical and Pathologic Features of Tropical Diseases (Maguire, von Lichtenberg)

Emphasizes the clinico-pathologic aspects of tropical diseases. Disease entities are reviewed through clinical cases with exposition of the pertinent clinical and pathologic features. (1.25 credits)

IMI 206d. Principles of Public Health Entomology (Spielman)

Discusses from ecological, physiological, and genetic points of view the manner in which arthropods transmit disease and outlines the principles of vector control. Includes weekend field trips. (2.5 credits)

IMI 208cd. Immunology of Infectious Diseases (Harn)

Presents the interactions of pathogens with the host immune system, from pathogen invasion to pathogenesis. (5 credits) Offered 1998–99 and alternate years.

IMI 209b. Parasitology (Maguire, Telford)

Presents laboratory methods for studying parasitic diseases. Provides an overview of life cycles and pathobiology of major parasitic infections. Introduce techniques essential to epidemiological or experimental research investigations focused on protozoa and helminths of public health importance. (2.5 credits)

IMI 210c. Bacteriology (Spielman, Telford, Goldman)

Covers laboratory methods for studying bacterial diseases. Explains life cycles, modes of transmission and pathology of selected bacterial infections of public health importance. Introduces essential bacteriological techniques for epidemiological investigations. (2.5 credits)

ID 211d. Vaccines: Past, Present, and Future (T.-H. Lee, Essex)

Covers such topics as methodology for new vaccine development; manufacturing and quality control; techniques to ensure appropriate use of vaccines; liability issues; cost-effectiveness analysis; decision analysis for future research, development, and distribution of vaccines; and epidemiology of vaccine-preventable illness. (2.5 credits) Offered 1998–99 and alternate years.

**IMI 211d. Virology (Kanki, Sankale, Essex)**

Presents principles of virus-host interactions at a population level. Selected viral pathogens are studied that exemplify the complexities of virus infection, host response, viral transmission and disease. Emphasizes the public health perspective of various aspects of viral infections. Introduces laboratory techniques for surveillance and diagnosis of viral infections for epidemiological studies. (2.5 credits)

IMI 216cd. Cellular and Molecular Biology of Parasites (Samuelson)

Covers aspects of cell, developmental, and molecular biology of protozoan and helminth parasites of humans. (5 credits) Not offered 1998–99.

IMI 222d. The AIDS Epidemic: Status, Dynamics, Prospects, Conflicts (Kanki, Essex)

Deals with a broad range of topics relating to the public health implications of the AIDS epidemic, including the virology, therapy, vaccines, and etiologic hypotheses concerning the origins of the virus. Topics include the dynamics of the epidemic, public policy issues, economic implications, and social support needs. (1.25 credits)

IMI 223d. Design and Development of an AIDS Vaccine (Essex, T.-H. Lee)

Brings together information on disease pathogenesis, the use of modern biomedical technology to design a vaccine antigen, and guidelines needed for vaccine safety and efficacy testing for a chronic infectious agent such as HIV. (2.5 credits)

Independent Study

Individual students or small groups of students who wish to go beyond the content of regularly scheduled courses may arrange with individual faculty members to participate in departmental research or undertake specialized readings or studies.

Adjunct Faculty

Charles B. Shoemaker, PhD; Chief of Molecular Parasitology, Agricultural Research, Wallaceville Animal Research Center, New Zealand.

DEPARTMENT OF MATERNAL AND CHILD HEALTH

The goal of the Department of Maternal and Child Health is to improve the health of women and children through basic and applied research, through preparation of professionals for leadership positions, and through advocacy and community service.

Faculty in the Department of Maternal and Child Health undertake research in six major areas: *infant mortality and morbidity*, including the evaluation of risk factors for mortality, methods for confidential perinatal inquiry, outcomes of high-risk infants, and the efficacy of early intervention; *normative growth and development*, including the analysis of patterns of growth, maturation, and behavioral, social, and nutritional changes in populations; *children with special needs*, including the assessment of health care for children with chronic illness or disability and the development of criteria for assessing proposals to reform the financing of health care; *high-risk youth*, including analysis of policies and strategies for preventing high-risk adolescent behaviors, examination of services for chil-

dren and youth with HIV, and longitudinal studies of the risk factors for delinquency, violent behavior, substance abuse, mental illness, and learning disabilities; *nutrition*, including epidemiologic studies of child undernutrition in the United States and developing countries, exploration of computerized screening for women and children at nutritional risk, and inquiries concerning HIV and breast-feeding; and *women's and children's health services*, including studies of the planning, policy development, and performance of federal, state, and local public health agencies.

The department's academic curriculum includes courses on maternal and child health problems of public health significance; the physical, social, and cognitive stages of human development; women and health; maternal and child health services; the roles of governmental, private, and voluntary health agencies; research methods; and the methodology of program planning, policy formation, and program evaluation in maternal and child health. All concentrators in the department are expected to acquire an understanding of normative growth and development, definition and research in maternal and child health problems, maternal and child health services, legislation supporting health and social services for mothers and children, and the planning of such services. All students fulfill the school-wide requirements for basic courses in biostatistics and epidemiology.

Limited tuition support may be available for some students in the department.

As described below, the department offers both four-semester and two-semester Master of Science (SM) programs, a dual master's degree program for nurses, and a doctoral program leading to the Doctor of Science (SD) or Doctor of Public Health (DPH) degree. Please refer to page 8 for information about the Master of Public Health concentration in Family and Community Health.

Master of Science in Maternal and Child Health (four-semester program)

The four-semester SM program is designed to prepare students for mid-level positions as project analysts, service coordinators, and managers in the field of maternal and child health. Recent graduates have taken such positions as deputy director of the National Coalition of Hispanic Human Services Organizations and training coordinator for the HIV Prevention Training Center.

Applicants to this program should have either a master's degree in a field not directly related to health (such as law, education, sociology, or statistics) or a bachelor's degree in a health-related field and at least two years of relevant work experience.

Of the 80 credits necessary to earn the four-semester SM, at least 30 must be earned in departmental courses or approved courses in other departments. Students in this program must also fulfill core requirements in biostatistics, epidemiology, environmental determinants of health, social and behavioral sciences, and health policy, planning, and administration. A minimum of 5 credits must be earned in field work either during the summer between the two years or in the second academic year.

Master of Science in Maternal and Child Health (two-semester program)

The two-semester SM program is designed to prepare health professionals for research careers in public and private agencies. Recent graduates have taken such positions as director of adolescent medicine at New England Medical Center, associate director of public health and research at Georgetown University, and assistant medical director of the Rhode Island Health Department; others have gone on to earn doctoral degrees.

Applicants eligible for the two-semester SM program are established practitioners or investigators holding prior master's or doctoral degrees in a related field such as medicine, dentistry, nursing, social work, nutrition, physical therapy, psychology, health education, or anthropology.

Of the 40 credits necessary to earn this degree, 20 must be earned in the Department of Maternal and Child Health or in approved courses from other departments.

Students in the two-semester SM program may choose to focus on a special area of interest, Quantitative and Evaluation Methods in Maternal and Child Health. This area of interest is designed to prepare health professionals for work in public and private agencies and places emphasis on quantitative methods, program evaluation, analysis of administrative data sets, and applied epidemiology. In addition to the regular two-semester SM requirements, this specialization includes an eight-week internship during the spring semester in an applied MCH setting, with placements typically at the Centers for Disease Control and Prevention or in state or local MCH agencies. The program also requires coursework on screening, needs assessment, and program evaluation. The standard duration is twelve months, with course work beginning during the summer prior to the academic year; however, an accelerated nine-month program is also available. Graduates of this program typically take positions as program evaluators/epidemiologists for MCH agencies.

Four-Semester, Two-Degree Master of Science in Maternal and Child Health (HSPH) and Parent-Child Nursing (Simmons College)

This four-semester, two-degree program is designed to prepare nurse practitioners for leadership roles in child, youth, women's, or school health programs. Recent graduates have taken such positions as director of clinical services for the Family Planning Association of Maine and staff director for the World Health Organization's Maternal Health and Safe Motherhood Program.

Applicants should hold a bachelor's degree from a program accredited by the National League for Nursing, a license to practice nursing, and the equivalent of at least three years of full-time nursing experience. International nurses with equivalent backgrounds are eligible to apply. Applicants must meet the general admission requirements of both HSPH and Simmons College.

For more information about research and training in Maternal and Child Health, please contact Patricia Lavoie, Department of Maternal and Child Health, 677 Huntington Avenue, Boston, MA 02115.

Phone: 617-432-1080

Fax: 617-432-3755

For more information about the four-semester, two-degree program in Maternal and Child Health and Parent-Child Nursing, please contact Jane Gardner, SD, Department of Maternal and Child Health, 677 Huntington Avenue, Boston, MA 02115.

Phone: 617-432-1080

Fax: 617-432-3755

For more information about the Simmons College component of the program, please call 617-521-2141.

Faculty

Department Chair: Marie C. McCormick, MD, ScD (Johns Hopkins University); Sumner and Esther Feldberg Professor of Maternal and Child Health and Director of the Harvard Center for Children's Health; Professor of Pediatrics, Harvard Medical School. Infant mortality; outcomes of high-risk neonates and interventions to ameliorate adverse outcomes.

Iain W. Aitken, BM (Cambridge University), MPH (Harvard University); Lecturer on Maternal and Child Health. Maternal health care; management of primary health care workers; design and financing of urban health care systems in developing countries.

Stephen L. Buka, SM, SM, SD (Harvard University); Associate Professor of Maternal and Child Health and Epidemiology. Causes and prevention of behavioral and developmental disorders of children.

Felton J. Earls, MD (Howard University); Professor of Human Behavior and Development; Professor of Child Psychiatry, Harvard Medical School. Longitudinal research to understand how community, family, and individual factors influence delinquent and criminal behavior.

Jane Gardner, SM (Boston College), SM, SD (Harvard University); Senior Lecturer on Maternal and Child Health. Quality of health care for women and children; health outcomes research in publicly funded programs.

Karen E. Peterson, RD (Peter B. Brigham Hospital), SD (Harvard University); Associate Professor of Nutrition (Maternal and Child Health and Nutrition). Epidemiology of malnutrition in industrialized and developing countries.

The following faculty members have secondary appointments at HSPH. Their primary affiliation is with Harvard Medical School.

Allen C. Crocker, MD (Harvard University); Associate Professor in the Department of Maternal and Child Health. Chronic illness and developmental disabilities in children; mechanisms of disability.

Barbara Gottlieb, MD (Tufts University), MPH (Boston University); Assistant Professor in the Department of Maternal and Child Health. Unintended pregnancy; cervical cancer; minority and community health; HIV risk and prevention; adolescent and school health; application of research methods in a community setting; methods of program evaluation.

Charles J. Homer, MD (University of Pennsylvania), MPH (University of North Carolina); Assistant Professor in the Department of Maternal and Child Health. Application of epidemiologic methods to the assessment of the effectiveness of health care services.

Daniel J. Kindlon, MS, PhD (Cornell University); Assistant Professor in the Department of Maternal and Child Health. Causes of behavior disorders and learning disabilities.

Elice S. Lieberman, MD (University of Florida), MPH, DPH (Harvard University); Associate Professor in the Department of Maternal and Child Health. Perinatal epidemiology; risk factors for adverse pregnancy outcomes; assessment of new technologies and care practices in obstetrics.

Eli H. Newberger, MD (Yale University), SM (Harvard University); Lecturer in the Department of Maternal and Child Health. Child abuse and family violence.

Students enroll in half-time study at both Simmons College and HSPH for two academic years, in addition to studying at Simmons for one summer session. The curriculum of the HSPH portion of the program is the same as that for the two-semester SM program.

Doctor of Science in Maternal and Child Health/Doctor of Public Health

The doctoral programs are designed to prepare public health professionals for research careers in academic institutions, public and private health agencies, and leadership roles in national and international organizations. Recent graduates have taken such positions as scientist/study director at the National Academy of Sciences and faculty positions in universities.

Applicants must have an advanced degree in a health field related to maternal and child health. They are expected to have a sound academic record with documented proficiency in the quantitative sciences, relevant work experience, and research interest in an area consonant with the goals of the department.

Doctoral candidates must spend two years in residence completing course work leading to a major (20 credits) in maternal and child health and minors (10 credits each) in two other fields. Students must pass the departmental written examination and the school-wide oral qualifying examination and must complete, defend, and submit a thesis based on independent research.

Women, Gender, and Health

HSPH offers a number of courses relating to women, gender, and health. For more information, see page 5.

BRYAN "BG" NELSON

Master's student, Department of Maternal and Child Health

Brian "BG" Nelson has been working with children for more than a decade—as nanny, nurse,

preschool teacher, and director of health in Minnesota's largest Head Start program. He feels passionately about the role men can play in children's lives.

"When men get close to children, it brings up in them a lot of issues that we've been taught to shut out," he says. Nelson has worked to nudge men into closer involvement with children, viewing such movement as "helpful not only for children but also for men." One of his current projects, he notes, "is designing a survey to look at the public's attitudes about men working with young children."

As for the future: "My goal is to combine research with intervention, to use my analytical skills to help people."

Courses Offered by the Department of Maternal and Child Health, 1998-99

Please note that this list may be incomplete and is subject to change. Detailed course listings, including information about prerequisites, course activities, and scheduling, are distributed to students with registration information.

Letters following course numbers indicate the period(s) in which a course is given: a and b (fall quarters); c and d (spring quarters); e and f (one-week sessions in January and March); s and t (1999 summer sessions).

MCN 200a. Physical Growth and Development I (Peterson)

Introduces the principles of growth assessment that are an integral part of comprehensive child health programs. Topics include the selection, measurement, and interpretation of anthropometric indicators of growth. (2.5 credits)

MCH 201abcd. Public Health Practice in Maternal and Child Health

Provides students with opportunities to apply quantitative skills in a field situation. Students conduct needs assessments, present data for policy decisions, and gain experience in the organization and management of public health programs. (5 credits)

MCH 202c. Physical Growth and Development II: Seminar on Factors Affecting Growth and Development (Dwyer)

Explores the basic factors that influence physical growth and development from conception to maturity, and their implications at the individual, family, community and national levels. (1.25 credits)

MCH 204ab. Maternal and Child Health Programs and Policies (Gardner)

Discusses health care programs for mothers and children in the context of growth and maturational processes, legislative background, and social, mental health, and educational policies. (5 credits)

MCH 206a. Maternal and Child Health in Developing Countries (Farrell, Valadian)

Evaluates the core elements of MCH status and services in developing countries and analyzes factors shaping MCH programs in rapidly changing social environments. (2.5 credits)

MCN 207ab. Nutrition in Child Growth and Development (Dwyer)

Examines principles and practical problems encountered in developing policies and programs involving nutritional issues, growth, and development. Discusses general principles of nutrition as background for policy issues. (2.5 credits)

MCH 208b. Adolescent Health (Kulig, Kennedy)

Examines adolescent health, risk behaviors, prevention and intervention programs in relation to physical, psychosocial, and cognitive development. (2.5 credits)

MCH 209c. Services for Children with Disabilities (Crocker, Helm)

Looks at how service programs in the disability field are put together, supported, and evaluated. Uses outside guests from community programs for many sessions. (2.5 credits)

MCS 210ab. Personality and Cognitive Development: Application to Public Health (Kindlon, Earls)

Examines the principles of child growth and development within a public health frame of reference. Emphasizes the theories and research of Skinner, Bronfenbrenner, and Erikson. (2.5 credits)

MCH 211cd. Women, Health, and Development (Gottlieb, Swenson)

Addresses the major issues concerning women and their relationship to health worldwide, including ways women affect the health of families, communities, and societies. (2.5 credits)

MCH 212ab. Developmental Disabilities I: Evaluation, Assessment, Families, and Systems (Helm, Crocker)

Focuses on issues facing professionals who work with people with developmental disabilities, including the professionals' role in diagnosing, evaluating, and assessing children who have developmental disabilities. (2.5 credits)

MCH 213d. Childbirth: Health Policy and Epidemiology (Sachs, Richardson, Lieberman)

Uses epidemiologic data to address perinatal health policy. Explores issues affecting childbirth services, including prenatal care, maternal health, and pregnancy complications. (1.25 credits)

MCH 214cd. Developmental Disabilities II: Values, Policy, and Change (Helm, Crocker)

Focuses on the community, system, and leadership components of developmental disabilities, with the goal of enhancing the quality of life of individuals with disabilities. (2.5 credits)

MCM 215cd. Planning and Evaluating Public Health Programs (Buka, McCormick)

Presents concepts and approaches to developing and evaluating programs and services for any health, human service, or social program. Topics include the development of knowledge and skills in needs assessment, program development, implementation and evaluation of public health programs (2.5 credits)

MCN 217c. Nutritional Surveillance (Peterson)

Covers theoretical and practical issues guiding the design and implementation of nutritional surveillance systems. (2.5 credits) Not offered 1998-99.

MCH 218c. The Urban Child in Global Perspective: Part I (Earls, Carlson)

Examines global and national patterns of urbanization and risk factors for psychological and physical morbidity in children. Topics include the changing family structure and community organization related to economic and social disadvantages based on low labor force participation, rural to urban migration, racial-ethnic discrimination and political marginalization, exposure to harmful drugs and infectious diseases, adult exploitation, and institutionalization. (1.25 credits)

MCH 220c. Society and Its Effects on Child Health (Palfrey, Samuels)

Examines the ways that society affects children's health in the US. Covers the effects of poverty on health and the public policy impact on chronic illness. (2.5 credits)

MCH 221d. The Urban Child in Global Perspective: Part II (Earls, Carlson)

Focuses on applications of the principles and research covered in MCH 218c. Students take responsibility for selecting specific situations in which children's health and well-being is threatened, and for designing the way in which the principles from MCH 218c are to be applied. (1.25 credits)

Judith S. Palfrey, MD (Columbia University); Professor in the Department of Maternal and Child Health. Development of preschool children; interface of health and educational services for children.

Joan Y. Reede, MD (Mount Sinai School of Medicine), MPH, SM (Harvard University); Assistant Professor in the Department of Maternal and Child Health. Biomedical manpower and academic/research career development; provision of health services for disadvantaged, minority, and special populations; impact of health policy on disadvantaged and minority populations.

Douglas K. Richardson, MD (Johns Hopkins University), MBA (University of Pennsylvania); Associate Professor in the Department of Maternal and Child Health. Impact of variations in practice styles on outcomes, resource use, and costs of neonatal intensive care.

Benjamin P. Sachs, MD, BS, MRCS, LRCP (St. Mary's Medical School, London University), DPH (University of Toronto); Professor in the Department of Maternal and Child Health. Epidemiology and health policy issues relating to women and children in technological evaluation, infant mortality, and medical services.

Edward C. Tronick, MS (Cornell University), PhD (University of Wisconsin); Associate Professor in the Department of Maternal and Child Health. Neurodevelopment of infants and children exposed to drugs in utero; depressive symptoms and mother-infant interaction.

Adjunct Faculty

Johanna T. Dwyer, SM, SM, SD; Professor of Medicine and Community Health and Director, Stern Nutrition Center, Tufts Medical Center.

Marie P. Farrell, MS, MSN, EdD, MPH; Professor Walter Schroeder Endowed Chair in Nursing Research, University of Wisconsin.

William T. Garrison, MA, PhD; Professor of Pediatrics and Psychiatry, University of Massachusetts Medical School.

David T. Helm, MA, PhD; Adjunct Associate Professor, Sociology Department, Boston University; Research Associate, Children's Hospital.

Sharon Brown, a master's student in the Department of Maternal and Child Health (left), and Boston-area youths took their public health message of violence prevention to the airwaves through a series of radio public service announcements and by hosting a call-in talk show.

William E. Kiernan, MEd, MBA, PhD; Research Associate, Children's Hospital.

Lawrence C. Kleinman, MD, MPH; Assistant Clinical Professor of Pediatrics, University of California School of Medicine.

John W. Kulig, MD, MPH; Associate Professor, Tufts University School of Medicine.

Albert J. Reiss, Jr., MA, PhD; William Graham Sumner Professor of Sociology, Emeritus, Yale University.

Deborah K. Walker, EdM, EdD; Assistant Commissioner, Bureau of Family and Community Health, Massachusetts Department of Public Health.

MCH 222ab. Social Services for Children, Adolescents, and Families (Newberger, Gary)

Presents the role of social services in maintaining and promoting the health of children and their families. Examines current political trends structuring the content and delivery of social services. (2.5 credits)

MCE 223c. Child and Adolescent Mental Disorders: Public Health Perspectives (McCormick, Blatt)

Examines the occurrence and risk factors of mental disorders of childhood and adolescence, including drug abuse and eating disorders. (1.25 credits)

MCH 232a. Physical Growth and Development III (Valadian)

A rigorous examination of the stages of physical growth and development introduced in MCN 200a. Expands on maturation, its components, their assessment and underlying neurological, biological, and chemical changes. Discusses how the sequential unfolding of maturation promotes changes in health and nutrition services for individuals and populations of children. (2.5 credits)

MCH 233d. Public Health Genetics: Contemporary Issues and Challenges (McCormick, Blatt)

Utilizes case studies to focus on developments in molecular biology and genetic medicine and explore the impact on biomedical research, health care delivery, ecological systems, and public health policy and regulation. (1.25 credits)

MCH 297ab. Leadership in Minority Health Policy (Reede)

Focuses on strategies for career development in minority health policy and on leadership skills necessary for effective performance in areas of public health practice and public policy. (1.25 credits)

MCH 298cd. Issues in Minority Health Policy (Reede)

Explores public policy issues affecting the health status of minority and disadvantaged populations, emphasizing problem identification, policy analysis, and program planning. (2.5 credits)

Independent Study, Field Experience

Individual students or small groups of students who wish to go beyond the content of regularly scheduled courses may arrange with individual faculty members to participate in departmental research, undertake specialized readings, perform field projects, or carry out independent studies. Formal tutorials are offered in the areas of clinical effectiveness and infant assessment in the context of prenatal exposures.

DEPARTMENT OF NUTRITION

The Department of Nutrition provides training and research opportunities in basic science relating to nutrition and in epidemiologic aspects of nutrition as they affect public health. Nutrition policy and the evaluation of nutritional interventions are long-standing interests of the department, particularly as they concern the populations of Latin America, Africa, Asia, and the United States. Interests of the department range from molecular biology to human studies of cancer and heart disease. Students learn and use the latest techniques in biochemistry, physiology, biostatistics, epidemiology, and related fields. Departmental research, whether basic or applied, is relevant to human health.

Current research covers a wide range of topics, including large prospective studies of dietary factors in relation to heart disease, cancer, diabetes, and ophthalmologic disease; development of methods to assess nutritional status by an analysis of body tissue; the interaction of nutritional factors with genetic determinants of disease; the interaction of nutritional factors and infectious agents; nutritional influence on blood pressure; effects of nutrition programs on the mental and physical consequences of malnutrition; nutritional determinants of blood lipid factors; lipoprotein metabolism; and regulation of the intra- and inter-cellular delivery of macromolecular nutrients.

Some graduates have assumed positions as faculty members and research scientists at medical schools, research institutes, and schools of public health; others have gone on to careers as public health nutritionists in international organizations or federal, state, or local governments. Career opportunities in the biological sciences as they apply to public health are expected to grow both in academia and in the biotechnology and pharmaceutical industries.

As described below, the department offers two doctoral programs. The first is a program in nutritional epidemiology/international nutri-

The mission of the Department of Nutrition is to im-

prove human health through improved nutrition. The department strives to accomplish this goal through research aimed at improved understanding of how diet influences health, the dissemination of new knowledge about nutrition to health professionals and the public, the development of strategies to enhance nutrition, and the education of researchers and practitioners.

tion leading to the Doctor of Science (SD) or Doctor of Public Health (DPH) degree. The second is a Doctor of Philosophy (PhD) program in nutritional biochemistry, offered through the Biological Sciences in Public Health Program (a component of the Division of Medical Sciences, Graduate School of Arts and Sciences). Applicants for the nutritional biochemistry program who hold a clinical degree in medicine, veterinary medicine, or dentistry may prefer to follow a different curriculum leading to the Doctor of Science (SD) degree; this option may be available by special arrangement with the department. Applicants to the SD or DPH programs who do not hold

For more information about research and training in Nutritional Epidemiology/International Nutrition, please contact Kelly Wells, Department of Nutrition, 655 Huntington Avenue, Boston, MA 02115.

Phone: 617-432-1333

Fax: 617-432-2435

E-mail: kwells@sph.harvard.edu

For application materials and information about admission to the PhD program, please contact the Admissions Office, Division of Medical Sciences, Harvard Medical School, 260 Longwood Avenue, Boston, MA 02115.

Phone: 617-432-0162

Applicants who have specific questions about the PhD program may contact Ruth Kenworthy, Administrator, Division of Biological Sciences, 665 Huntington Avenue, Boston, MA 02115.

Phone: 617-432-4470

Fax: 617-432-4098

kenworthy@cylab.harvard.edu

Faculty

Department Chair: Walter C. Willett, MD (University of Michigan), MPH, DPH (Harvard University); Fredrick John Stare Professor of Epidemiology and Nutrition; Professor of Medicine, Harvard Medical School. Relation of dietary factors to the occurrence of human disease, in particular heart disease and cancer.

Alberto Ascherio, MD (University of Milan), Diploma (London School of Hygiene and Tropical Medicine), MPH, DPH (Harvard University); Associate Professor of Nutrition and Epidemiology. Relation of dietary factors to the occurrence of human disease.

Hannia Campos, MS, PhD (Tufts University); Assistant Professor of Nutrition. Human lipoprotein metabolism; cross-cultural studies of diet and cardiovascular risk factors with emphasis on Hispanic populations; gene-environment interactions; biochemical markers of dietary intake.

an earned doctoral degree must submit scores (no more than five years old) from the General Test of the Graduate Record Examination (GRE). Applicants holding an earned doctoral degree must submit scores from the GRE or other aptitude tests. Funding may be available through the NIH-supported Training Program in Nutritional Science for students with previous doctoral degrees. Please refer to page 8 for information about the Master of Public Health concentration in Family and Community Health.

Doctor of Science in Nutrition/Doctor of Public Health

The program in Nutritional Epidemiology/International Nutrition leading to an SD or a DPH degree provides rigorous training in epidemiology and biostatistics as well as the biological aspects of nutrition. The overall objective is to enable students to investigate relationships between diet and disease.

The program includes formal course work, a practical research project, a seminar, and a thesis research project. Students must pass the departmental oral comprehensive examination and the school-wide oral qualifying examination and must complete, defend, and submit a thesis. In addition to fulfilling the school-wide doctoral requirements in introductory epidemiology (EPI 200 or EPI 201a) and intermediate biostatistics (BIO 210cd or BIO 211cd), students must complete a major (20 credits) in nutrition and two minors (10 credits each), one of which must be epidemiology. Students in a joint program with the Department of Epidemiology must satisfy the course requirements of both departments, select a minor field acceptable to both departments, and write a thesis on a topic concerning both nutrition and epidemiology.

Applicants must have a strong background in biology and mathematics. An MD or other professional health-related degree is desirable but not required. Admission to a joint program with Epidemiology requires the approval of both departments, and applicants should contact the Department of Nutrition before making formal application.

EDUARDO VILLAMOR

Doctoral student, Department of Nutrition

Eduardo Villamor is drawn to field-based research because "it sensitizes you to

the people when you share with them and live with them," he says.

His research on micronutrients—such as those found in vitamins, or in minerals like iodine—in his Colombian homeland brought Villamor to HSPH because, he says, "the Department of Nutrition has the top micronutrition research team in the world, especially when it comes to field trials."

Villamor sees micronutrient malnutrition as "a baseline problem. Children are especially at risk in places like Colombia," he says, "because their parents cannot afford to buy protein-rich foods."

When he graduates, Villamor plans to return to Colombia, "advocating for policy changes through my research. Right now," he adds, "I'm trying to establish links between HSPH and the National University of Colombia to facilitate the availability of resources for my work there. After all, contacts with people are, in themselves, resources."

Doctor of Philosophy in Biological Sciences in Public Health (BPH) (Nutritional Biochemistry)

Students wishing to study cellular and molecular biology or physiology as they pertain to major problems in public health should apply to the Biological Sciences in Public Health program. This program offers the PhD degree through Harvard University's Graduate School of Arts and Sciences, Division of Medical Sciences, Committee on Biological Sciences in Public Health.

The PhD program in nutritional biochemistry provides students with rigorous training in biochemistry, cell biology, and metabolism that allows them to work toward solving nutritional and metabolic problems in the laboratory. The program also offers a firm founda-

tion in epidemiology and biostatistics. Specific courses supplement this core, as dictated by individual research concentrations. Students in this program engage in laboratory rotations in three different research areas to enable them to assess realistically their interests in a thesis project and to evaluate the suitability of the laboratory and the mentor. At the completion of these rotations, students select an area of concentration and a thesis research laboratory and complete the required curriculum. A qualifying examination must be passed before engaging in thesis work, and the thesis must be defended before the granting of the PhD. Some students also participate in the Master of Biomedical Science Program, which is designed to offer PhD students a greater knowledge of human biology and disease.

Applicants to the PhD program generally have a bachelor's degree and demonstrated competence in organic and biological chemistry, general biology, physics, and calculus. Those deficient in one of these areas may be admitted provisionally on the condition that appropriate courses will be taken before and/or after entering the program. Applicants must take both the GRE general and at least one science-subject tests by October in order to meet the application deadline of December 15.

All students admitted to the PhD program receive a stipend and tuition support. Students are encouraged to apply for fellowships from outside sources since certain external fellowships provide higher stipends. While funds to support international students are limited, one special scholarship is available each year for a student from a developing, subSaharan African country. There is also a university-wide fellowship program that provides funding to qualified underrepresented minority students in the sciences.

Courses Offered by the Department of Nutrition, 1998-99

Please note that this list may be incomplete and is subject to change. Detailed course listings, including information about prerequisites, course activities, and scheduling, are distributed to students with registration information.

Letters following course numbers indicate the period(s) in which a course is given: a and b (fall quarters); c and d (spring quarters); e and f (one-week sessions in January and March); s and t (1999 summer sessions).

NUT 201b. Principles of Nutrition (Lo)

Emphasizes basic concepts of nutrition from epidemiologic, clinical, metabolic, and international perspectives. Topics include nutritional assessment, malnutrition, obesity, eating disorders, relationships between nutrition and cancer and heart disease. (2.5 credits)

NUT 202cd. The Science of Human Nutrition (Sacks, Lo)

Reviews the biochemistry of carbohydrates, fats, proteins, vitamins, and minerals in the context of human disease. Emphasizes current knowledge of the mechanisms that may explain the role of diet in the causation and/or prevention of ischemic heart disease, diabetes, obesity, hypertension, and cancer. (5 credits)

NUT 203ab. Human Nutrition/Nutritional Epidemiology Seminar (Willett)

Focuses on the development of methods and the analysis and interpretation of nutritional epidemiologic data. (1.25 credits)

NUT 204cd. Advanced Topics in Nutrition I (Hotamisligil)

Enables students to review and analyze recent key papers that provide either epidemiological or laboratory evidence that bears on a topic of current interest in human nutrition. Teaches skills necessary for oral presentation. (2.5 credits)

NUT 205ab. Advanced Topics in Nutrition II (Campos)

Extends NUT 204cd by allowing students to participate in and present seminars reviewing current research and publications related to nutrition, and to attend advanced seminars presented by faculty and guest speakers. Provides practical training in communication skills for oral presentation. (2.5 credits)

NUE 207cd. Scientific Writing in Nutrition and Epidemiology (Stampfer)

Covers organization of scientific papers, presentation of data in graphical and tabular forms, and style. Designed for advanced students beginning to work on a paper for publication. (2.5 credits)

Wafaie W. Fawzi, MPH, SM, DPH (Harvard University); Assistant Professor of International Nutrition. Etiologies of infectious diseases with emphasis on dietary and nutritional causes; relationships of dietary factors to disease in pregnancy and childhood.

Peter Goldman, AM (Harvard University), MD (Johns Hopkins University); Professor of Health Sciences in Nutrition; Maxwell Finland Professor of Clinical Pharmacology, Harvard Medical School. Metabolism of drugs and food constituents, particularly as carried out by intestinal bacteria; areas of metabolism and kinetics that may help to provide an understanding of a compound's biological activity.

M. Guillermo Herrera-Acena, MD (Harvard University); Senior Lecturer on Nutrition. Epidemiology of protein-energy malnutrition and vitamin A deficiency; role of nutrition and other environmental factors in the etiology and management of diabetes mellitus.

Gökhan S. Hotamisligil, MD (Ankara University), PhD (Harvard University); Assistant Professor of Nutrition. Studies on the regulatory pathways that control energy metabolism; signal transduction in mammalian cells; biology of fatty acid binding proteins; genetic manipulation of mice.

Karen E. Peterson, RD (Peter B. Brigham Hospital), SD (Harvard University); Associate Professor of Nutrition (Maternal and Child Health and Nutrition). Epidemiology of malnutrition in industrialized and developing countries.

Eric B. Rimm, SD (Harvard University); Assistant Professor of Epidemiology and Nutrition. Relation of dietary factors to the occurrence of human diseases, in particular cardiovascular disease

Meir J. Stampfer, MD (New York University), MPH, DPH (Harvard University); Professor of Epidemiology and Nutrition. Influence of diet and exogenous hormones on health, particularly heart disease and cancer.

Marianne Wessling-Resnick, MS (University of Chicago), PhD (University of Massachusetts); Associate Professor of Nutrition. Regulation of the cellular uptake of macromolecular nutrients; molecular basis of iron transport.

Fredrick J. Stare, professor of nutrition emeritus, founded the Department of Nutrition in 1942 and served as its chair until his retirement in 1976. He continues to be an enthusiastic contributor to the school's endeavors.

The following faculty members have secondary appointments at HSPH. Their primary affiliation is with Harvard Medical School.

Marla J. Berry, PhD (University of California, Santa Barbara); Assistant Professor in the Department of Nutrition. Selenoprotein synthesis and translational control of gene expression.

Edward L. Giovannucci, MD (University of Pittsburgh), MPH, SD (Harvard University); Assistant Professor in the Department of Nutrition. Etiologies of cancer with emphasis on dietary causes; methodologies to measure dietary factors in epidemiologic studies.

Clifford W. Lo, MD (University of Hawaii), MPH (University of California, Los Angeles), ScD (Massachusetts Institute of Technology); Assistant Professor in the Department of Nutrition. Calcium, vitamin D, and parathyroid metabolism; total parenteral nutrition.

Frank M. Sacks, MD (Columbia University); Associate Professor in the Department of Nutrition. Human lipoprotein metabolism; effects of diet and hormones; dietary fatty acids, cardiovascular disease, and cancer.

Wiley W. Souba, MD (University of Texas at Houston), SD (Harvard University); Professor in the Department of Nutrition. Nutrition, metabolism and cancer; impact of glutamine nutrition on cellular function, metabolism, and structure.

W. Allan Walker, MD (Washington University); Professor in the Department of Nutrition. Gastrointestinal immunology; developmental gastroenterology; protective functions of breast milk; macromolecular transport; intestinal gene expression.

NUT 209ab. Seminars in Food Science and Technology (Herrera-Acena, Lo)

Examines the effects of genetic engineering, agriculture, food preservation and storage technology, marketing practices, and cooking on diet composition and public health. (2.5 credits) Not offered 1998-99.

NUT 210cd. Nutritional Problems of Less-Developed Countries (Herrera-Acena)

Discusses the nutrition problems of less-developed countries in the context of basic human needs. Reviews the ecological, biological, and behavioral consequences of malnutrition and emphasizes issues in human biology relevant to the formulation of nutrition policy and programs. (2.5 credits)

NUE 212b. Nutrition and Heart Disease (Sacks, Stampfer)

Covers the relationship between diets, nutrients, and cardiovascular disease from the perspectives of epidemiology, clinical trials, and metabolism. Topics include dietary fats, minerals, antioxidants, the folate/homocysteine system, alcohol, hypertension, and stroke. (1.25 credits)

NUT 214abcd. Research Techniques in Nutritional Biochemistry (Wessling-Resnick)

Enables students to rotate through the laboratories of faculty members in the Nutritional Biochemistry Program in order to learn current techniques applied to nutritional, cellular, and biochemical research. (10 credits)

NUE 216cd. Nutritional Epidemiology I (Willett)

Reviews methods for assessing the dietary intake of populations and individuals. Students gain experience in the collection, analysis, and interpretation of dietary intake data, and learn to integrate information from international studies, secular trends, clinical trials, analytical epidemiology, and animal experiments. (2.5 credits)

NUE 218ab. Nutritional Epidemiology II (Ascherio)

Addresses methodological aspects of research in nutritional epidemiology. Topics include validation studies, adjustment for energy intake, and correction of measurement error. (2.5 credits) Not offered 1998-99.

NUT 220d. Molecular Biology Laboratory Techniques (Wessling-Resnick)

Provides hands-on training in modern molecular research, including PCR, RFLP analysis, DNA sequencing, and interpretation of results. Emphasizes fundamentals of laboratory procedures. (2.5 credits)

NUT 301. Nutrition/Health Promotion in the Mass Media (Willett, Cheung)

Focuses on the role of the mass media in the promotion and adoption of healthy eating practices. Examines the import of the extent and quality of coverage in various mass media outlets, strategies for creating messages for mass media use, and the effectiveness of existing mass communication campaigns in nutrition. (Credit to be arranged)

Independent Study

Individual students or small groups of students who wish to go beyond the content of regularly scheduled courses may arrange with individual faculty members to participate in department research or to undertake specialized readings or studies in the following areas: (a) nutrition and other environmental factors in the etiology and management of diabetes mellitus (Herrera-Acena); (b) the surveillance and epidemiology of nutrition in industrialized and developing countries (Peterson); (c) regulation of the cellular uptake of macromolecular nutrients (Wessling-Resnick); (d) nutritional epidemiology (Willett); and (e) regulation of the altered amino acid metabolism that occurs in catabolic disease states (Souba).

DEPARTMENT OF POPULATION AND INTERNATIONAL HEALTH

The mission of the Department of Population and International Health is centered on a philosophy of global health equity in which mutual learning and exchange are fostered in an independent university committed to scholarship and education. World population and health are in rapid transition in the late twentieth century, and changes in demography, health threats, and health policies are under way in virtually all societies, rich and poor. In developing countries, research and education are essential for the diagnosis of public health problems, the development of innovative policy responses, the application of new health technologies, and the expansion of basic and applied knowledge.

Faculty in the department are specialists in various disciplines associated with population and international health: anthropology, demography, ecology, economics, epidemiology, ethics, medicine, political science, reproductive biology, and sociology. Their research spans a wide spectrum of interests, including aspects of social and economic development, health policy, and demography; design and financing of health care systems; reproductive health and child survival; human rights; and programs concerned with the prevention and control of AIDS, tuberculosis, cholera, and diarrheal diseases.

Students in the department come from a variety of backgrounds. Most have had advanced training in the biological or social sciences or extensive experience in applied fields relevant to population sciences, although some begin with bachelor's-level training in these fields. Many students are from developing countries, and all have an interest in the health of disadvantaged populations worldwide.

As described below, the department offers both a four-semester Master of Science (SM) program and a program leading to the Doctor of Science (SD) or Doctor of Public Health (DPH) degree. In addition to these programs, the department hosts research fellows and short-term executive trainees in population

The goal of the Department of Population and International Health is to help advance world health through research and by encouraging the growth of relevant skills and knowledge, particularly in developing countries. To achieve this goal, the department's faculty, students, and research fellows generate knowledge through interdisciplinary research, strengthen skills and capacities through education, and promote international scientific cooperation through collaborative activities.

and health research, and supervises cooperative technical projects overseas. Please see page 8 for information about the Master of Public Health concentration in International Health.

Master of Science in Population and International Health

The SM program, which is completed in four semesters, equips students with the skills and knowledge required by professional organizations active in the fields of population and international health. Recent graduates have

For more information about research and training in Population and International Health, please contact the Education Office, Department of Population and International Health, 665 Huntington Avenue, Boston, MA 02115.

Phone: 617-432-2253

Fax: 617-566-0365

E-mail: ajiamong@sph.harvard.edu

Faculty

Acting Department Chair: Michael R. Reich, AM, PhD (Yale University); Taro Takemi Professor of International Health Policy. Political economy of health and development; health consequences of development policy; health policy in Japan.

Iain W. Aitken, BM (Cambridge University), MPH (Harvard University); Lecturer on Maternal and Child Health. Maternal health care; management of primary health care workers; design and financing of urban health care systems in developing countries.

William Alonso, MCP (Harvard University), PhD (University of Pennsylvania); Richard Saltonstall Professor of Population Policy; Member of the Faculty of Arts and Sciences. Issues of regional development; migration policies.

Peter A. Berman, MSc, PhD (Cornell University); Associate Professor of International Health Economics. Health care financing in developing countries; economic assessment of health policies and programs.

David E. Bloom, MA, PhD (Princeton University); Professor of Population and Health Economics; Deputy Director, Harvard Institute for International Development. Applied micro-economics: labor, population, health, development, and environment; demography.

Richard A. Cash, MD (New York University), MPH (Johns Hopkins University); Lecturer on International Health; Institute Fellow, Harvard Institute for International Development. Development of health systems for rural and urban populations in developing countries.

taken such positions as consultant on family planning and service delivery in women's health for United Nations organizations, and consultant to the Population Council. Others proceed from the SM to the doctoral program.

Applicants must have a bachelor's degree or equivalent, though many students hold advanced degrees in medicine or a social science discipline. Preference is given to those with relevant international health work experience.

Of the 80 credits necessary to complete the master's program, about half are earned in required courses. Some of these are departmental requirements, including a 5-credit master's thesis, while others represent school-wide requirements in biostatistics and epidemiology. The remaining credits allow students to specialize in particular areas of interest under the guidance of faculty advisors.

The first year of study is usually devoted to full-time course work. During the summer between the first and second years, students are encouraged to undertake internships providing practical experience in population and international health. The second year usually involves a combination of course work and completion of the master's thesis.

Doctor of Science in Population and International Health/Doctor of Public Health

The doctoral programs are designed to prepare students for both professional leadership positions in the public or private sectors of public health and for academic careers in universities or research institutions. Recent graduates have taken positions with the Centers for Disease Control and Prevention, the World Bank, non-governmental organizations, and postdoctoral and teaching positions with universities in the US and around the world.

Desired applicants have outstanding academic records, substantial relevant experience in the international public health arena, and professional interests which match one of the department's three doctoral concentrations: population and reproductive health, international health policy and economics, and international health epidemiology and human ecol-

TONYA NYAGIRO

Master's student, Department of Population and International Health

In 1992, newly graduated economist Tonya Nyagiro—who is originally from Tanzania—was designing employee

health benefits programs for a corporate health consultant in San Francisco. "But I kept wondering about all the people who don't have health insurance," she recalls. "Because in our great society, as in every part of the globe, so many people lack access to health services."

Nyagiro's questionings drew her to Cameroon, where she worked first in harsh desert, then in lush rain forest. "We implemented immunization campaigns and health and sanitation projects," she says, "for village people who had no preventive health services."

Her work in Africa "reinforced in my mind how global these health access problems are," Nyagiro says. "It reconfirmed my decision to work in preventive health, focusing on women and children."

Upon graduating, Nyagiro says "I will return to Tanzania, to work in program and policy development in reproductive health and rights, including family planning, women's health, and HIV/AIDS and STD prevention."

ogy. A master's degree is recommended, but not required, for entry into a doctoral program. Students may enter the department's 80-credit master's degree program and, at a later date, apply to enter the doctoral program. Entry to the doctoral program will then depend upon outstanding performance in the master's degree program and acceptance through the regular doctoral program admission process.

Two academic years of full-time residence at the graduate level is required. The first year is ordinarily devoted to course work. The second year usually involves both course work and research planning. Subsequently, additional courses are taken to fulfill remaining requirements and/or to gain special skills related

to thesis research. The pace of progress depends largely on the student's individual plan, which is designed in collaboration with an advisor and thesis committee. Ultimately, students must demonstrate detailed knowledge and understanding of a major field (20 credits) and two minor fields (10 credits each), must pass both the departmental written examination and the school-wide oral qualifying examination, and must prepare, defend, and submit a thesis based on original research.

The major field must be chosen from one of the three areas of concentration offered by the department, as described below. Minor fields may also be chosen from the department or from allied departments of the school or university, including the Departments of Biostatistics, Epidemiology, Health and Social Behavior, Immunology and Infectious Diseases, Nutrition, or Maternal and Child Health. The departmental concentrations promote skill development, encourage multidisciplinary approaches to health problems, and provide opportunities for extensive linkages in diverse field settings in Africa, Asia, or Latin America.

Population and Reproductive Health This concentration is designed for students with an interest in the interdisciplinary study of human fertility, health, and mortality, and who desire a population-based perspective on the changing patterns of mortality and morbidity worldwide. A core curriculum provides students with the basic skills to measure demo-

Women, Gender, and Health

HSPH offers a number of courses relating to women, gender, and health. For more information, see page 5.

graphic and health trends, and to understand how fertility, mortality, age structure, and reproductive health are inextricably linked. Students become familiar with the global and regional components of reproductive health, and its determinants and consequences. International and local policies as well as services for promoting family planning, reproductive health, and family health are examined and their impact evaluated.

The program stresses a population-based approach to international health issues. Comparative analysis is used to highlight disparities, similarities, and differences between developed and developing countries' experiences, and between different social classes within a single population. There is a strong emphasis on field methods and practical aspects of data collection, analysis, and presentation. Though faculty are drawn from a variety of disciplinary backgrounds, all have close contact with contemporary population and reproductive health problems in developing countries.

Faculty research in this concentration includes the design and use of qualitative and quantitative methods for the study of reproductive mortality and morbidity; infertility and its determinants and consequences; sociocultural and biomedical determinants of contraceptive acceptability; the design and evaluation of family planning and reproductive health services; gender-based perspective and differentials in health and mortality; intergenerational relations in developing countries; and policy reform following the 1994 Conference on Population and Development.

This concentration has strong regional interests in South and East Asia, subSaharan Africa, North Africa, and the Arab world.

For more information about courses related to Bio- and Public Health Mathematics, contact Tamara Awerbuch, PhD, Department of Population and International Health, 665 Huntington Avenue, Boston, MA 02115.

Phone: 617-432-2505

Fax: 617-566-0365

E-mail: tamara@hsph.harvard.edu

Lincoln C. Chen, MD (Harvard University), MPH (Johns Hopkins University); Professor of International Health. Biochemical, clinical, and field studies of cholera and diarrheal diseases; epidemiology of malnutrition; demography, mortality, and health policy in developing countries. (On leave until January, 1999)

Arthur J. Dyck, AM (University of Kansas), PhD (Harvard University); Mary B. Saltonstall Professor of Population Ethics; Member of the Faculty, Harvard Divinity School. Concepts of human rights, including ethical issues.

Timothy G. Evans, DPhil (Oxford University), MD (McMaster University); Assistant Professor of International Health Economics. Impact and assessment of chronic disease; assessment of blindness and the associated mortality, morbidity, and socioeconomic sequelae. (On leave until July, 1999)

Joseph J. Harrington, AM, PhD (Harvard University); Professor of Environmental Health Engineering (Environmental Health and Population and International Health); Gordon McKay Professor of Environmental Engineering, Faculty of Arts and Sciences. Water resources planning and quality management; environmental monitoring and control systems; applied statistics for modeling; management for tropical disease control.

Allan G. Hill, PhD (University College, Durham), Diploma in Demography (Princeton University); Andelot Professor of Demography. Demography of the Middle East and West Africa; impact on mortality of child survival programs; modern contraception and reproductive health.

Bio- and Public Health Mathematics

Several departments offer courses designed to promote research and education in mathematics as applied to scientific problems in public health and medicine. The Committee on Bio- and Public Health Mathematics has compiled a list of courses that teach the development or implementation of mathematical tools in public health research.

For more information about the Takemi Program in International Health, contact Michael R. Reich, PhD, 665 Huntington Avenue, Boston, MA 02115.
Phone: 617-432-0686
Fax: 617-432-1251
E-mail: takemi@hsph.harvard.edu

Sheila Sen Jasanoff, MA (University of Bonn); PhD, JD (Harvard University); Professor of Science and Public Policy; Professor of Science and Public Policy, John F. Kennedy School of Government. Comparative study of biotechnology in Britain, Germany, and US.

Ulla M. Larsen, MA (Odense University, Denmark), PhD (Princeton University); Associate Professor of Demography. Interface of demography and health; sterility and reproductive health; focus on Africa.

Richard Levins, PhD (Columbia University); John Rock Professor of Population Sciences. Human ecology; viability of populations and environments; special interest in Caribbean region.

Christopher J. L. Murray, MD (Harvard University), DPhil (Oxford University); Professor of International Health Economics. Tuberculosis control strategies, with an emphasis on cost-effectiveness; health transition studies.

A. K. Nanda Kumar, MSc (Bangalore University), MA, PhD (Boston University); Assistant Professor of International Health Policy and Economics. Public and private roles in financing and providing health care services; econometric models of demand and demand equations for health care in developing countries.

Carla M. Obermeyer, MA, MSc (American University of Beirut), SD (Harvard University); Associate Professor of Population and Anthropology. Cultural context of health and reproduction, reproductive health care in North Africa, demography of Arab countries, population policies in the Middle East, cross-cultural perspectives on reproductive rights, cultural construction and management of menopause in Morocco and Lebanon, integrating qualitative and quantitative methods in population and health research.

The Takemi Program in International Health

This is a nondegree program offering fellowships for research and advanced training on critical issues of international health, especially those related to developing countries. The program is interdisciplinary in nature, and addresses problems of mobilizing, allocating, and managing scarce resources to improve health, and of designing strategies for disease control and health promotion. Fellows' research is usually related to a policy problem in their own country.

Takemi fellows are professionals and scholars from around the world with training and experience in public health, medicine, economics, policy analysis, biological science, and other fields. The program enables individuals in the early or middle stages of their careers to strengthen their knowledge of disciplines such as economics, epidemiology, policy formulation, political analysis, or the use of quantitative analytic methods. It is not designed for projects with biomedical laboratory requirements.

The program can fund a limited number of fellowships each year and can assist in identifying external sources of funding, which applicants are encouraged to pursue.

International Health Policy and Economics

This concentration is designed for students who wish to develop skills and pursue research on the economic and political analysis of health policy in developing and less-developed countries. The concentration has three main objectives: First, to provide students with doctoral-level knowledge in theory, analysis, and research methods in either political science or economics so that they are able to perform doctoral research in this area. Second, the concentration provides students with a broad education in population sciences, epidemiology, and issues and institutions in international health. Third, there is a component on the political economy of international health which complements the training in eco-

nomics. Students in this concentration choose to focus on either economics or political science. Candidates who focus on economics are required to take microeconomic theory, econometrics, and other field economics such as welfare and development economics equivalent to the level offered by a doctoral program in a standard economics departments. Candidates less well-prepared in quantitative methods usually take a year longer to complete the course work required for the program. Applicants are encouraged to contact faculty in the concentration to discuss necessary levels of quantitative skills required for entry.

International Health Epidemiology and Ecology This concentration is designed for students who wish to take a broad, integrated approach to researching health problems and in developing the methods for such study. Students will develop an understanding of health as part of the relationships between people and between humans and nature in the contexts of evolution, environmental change, infectious disease ecology, economic development, and demography. Through this process, students will gain skills to identify the determinants, consequences, and dynamics of health problems; and learn to plan, implement, and evaluate health promotion and disease prevention strategies and programs.

The epidemiologic component of this area emphasizes the application of the combination of ecological, population-genetic, and evolutionary theories with qualitative mathematical methods on international patterns of health and disease. The ecological aspect of the curriculum focuses on health aspects of ecology and the inseparability of social and biological aspects of human ecology. Students also acquire in-depth knowledge of a sampling of major disease problems, ecological habitats, and health programs.

Courses Offered by the Department of Population and International Health, 1998-99

Please note that this list may be incomplete and is subject to change. Detailed course listings, including information about prerequisites, course activities, and scheduling, are distributed to students with registration information.

Letters following course numbers indicate the period(s) in which a course is given: a and b (fall quarters); c and d (spring quarters); e and f (one-week sessions in January and March); s and t (1999 summer sessions).

PIH 191cd. Cities and Regions (Alonso)

Stresses the interaction of societies and their geographies, focusing on historic and current developments in the US. Considers demography, technology, institutions, ideology, health, the economy. (5 credits)

PIH 200a. Population and Health (Rahman)

Teaches the population-based approach to give insight into international public health issues. Reviews the links between fertility, mortality, and reproductive health and examines health and mortality transitions in developed and developing countries. (2.5 credits)

PIH 202b. Population, Health and Development (Hill, Bloom)

Examines the relationships between population change and development in history and in the contemporary world. Introduces classics in the population and economic development literature. Reviews the causes and consequences of the demographic transition in developing countries and assesses the relationships between gender differences and other inequalities to past and current demographic patterns. (2.5 credits)

PIH 203cd. Computer Methods for Demography and International Health (Atwood, Larsen)

Covers computer techniques required for the design, collection, management, and analysis of types of data commonly encountered in population and health surveys in developing countries. Provides students with the computer skills needed in PIH 221c and PIH 222d. (2.5 credits)

PIH 211b. Financial Control in Health Organizations (Campbell)

Introduces topics critical in managing health organizations and programs in developing countries, including the language and analytical methods of financial control. (2.5 credits)

PIH 212c. Sociocultural Dimensions of International Health (Heggenhougen)

Reviews the relevance of sociocultural factors and elaborates the contributions of medical anthropology to international public health. Topics include health-seeking behavior, professional and public health education, and anthropological approaches to tropical diseases. (2.5 credits)

PIH 213d. Management Information Systems for Third World Health Systems (Lamstein, Reich)

Explores theoretical and practical concepts of information systems design. Begins with basic concepts of management, information theory, and systems analysis and proceeds to develop a general understanding of the design considerations of MIS. (2.5 credits)

PIH 216d. Child Rights/Child Health (Gruskin, Reich)

Focuses on international human rights norms, institutions, and procedures and their application to selected topics in child health, including disability, refugee status, and HIV/AIDS infection. (1.25 credits)

PIH 217d. How Vulnerable Are We to HIV? (Tarantola, Gruskin, Reich)

Provides a method for assessing individual and collective vulnerability to the HIV/AIDS epidemic. Considers the sensitivity, specificity, and applicability of assessment methods at different stages of the pandemic. (2.5 credits)

PIH 218c. Health and Human Rights (Gruskin, Reich)

Topics include the impact of health policies and programs on human rights, health consequences of human rights violations, and the linkage between promoting and protecting health and promoting and protecting human rights. (2.5 credits)

PIH 220ab. Introduction to Demographic Methods (Gardner, Hill)

Presents the main demographic approaches to the study of population structure and dynamics, including data sources, age and sex composition, growth, fertility, nuptiality, and mortality. (2.5 credits)

PIH 221c. Fertility Analysis (Larsen)

Introduces techniques in fertility analysis and the various data sources used to estimate and interpret levels and differentials of fertility. Emphasizes underlying assumptions, application of methods, and interpretation of results. (2.5 credits)

PIH 222d. Mortality Analysis (Hill)

Explains how childhood and adult mortality is measured when registration data are lacking. Shows how data from surveys and routinely collected health data may be used for mortality assessments. (2.5 credits)

M. Omar Rahman, MD (Northwestern University), MPH, SD (Harvard University); Assistant Professor of Demography and Epidemiology. Healthy aging in rural societies; determinants of pregnancy outcomes in developing countries; assessment of adult health status and international comparisons of gender differences; assessment of quality of health care services; socioeconomic determinants of adult health.

Chi-Man (Winnie) Yip, PhD (Massachusetts Institute of Technology); Assistant Professor of International Health Policy and Economics. Application of economic models and econometric techniques to study of health care policies.

The following faculty members have secondary appointments at HSPH. Their primary affiliation is with Harvard Medical School.

Mary Carlson, MA (University of Wisconsin), PhD (Northwestern University), MPA (Harvard University); Associate Professor in the Department of Population and International Health. Recovery of behavioral function after brain damage or sensory deprivation; consequences of social deprivation in institutionalized infants; street children and child rights legislation in Brazil.

Harald K. Heggenhougen, MA, PhD (New School for Social Research); Associate Professor in the Department of Population and International Health. Medical anthropology as applied to international health.

Mary E. Wilson, MD (University of Wisconsin); Assistant Professor in the Departments of Population and International Health and Epidemiology. Infections acquired during travel and residence in tropical and developing countries.

Grace Wyshak, SM (Harvard University), PhD (Yale University); Associate Professor in the Departments of Biostatistics and Population and International Health. Biostatistical and demographic methods; women's reproductive health.

Adjunct Faculty

Sudhir Anand, DPhil; University Lecturer in Quantitative Economic Analysis, Oxford University. Acting Director of the Harvard Center for Population and Development Studies.

John C. Caldwell, PhD; Professor and Chairman, Department of Demography, Australian National University.

Adetokunbo O. Lucas, MD, SM; consultant.

Gita Sen, MA, PhD; Professor, Indian Institute of Management, Bangalore, India.

PIH 224d. The Epidemiology of the Family (Rahman)

Explores how membership in a family affects one's health and survival, including investigations of the social, economic, behavioral, informational, and biological links between individuals and their kin group. (2.5 credits)

PIH 225c. Qualitative Research Methods for Population and Health (Obermeyer)

Introduces anthropological methods used to gain insight into shared understandings and behaviors. Emphasizes the distinctions between the collection and interpretation of data obtained by observation, by interviewing and focus groups, and by the analysis of texts and narratives. (2.5 credits)

PIH 227b. Culture, Health, and Reproduction (Obermeyer)

Uses the concepts of anthropology to understand health and reproduction in their sociocultural context. Topics include reproduction and menstruation, cultural notions of reproductive health and family planning, gender inequality, breast feeding and child nutrition (2.5 credits)

PIH 229c. The Analysis of Event Histories (Larsen)

Increases familiarity with different event history analysis techniques, such as actuarial tables and Cox models. Emphasizes understanding the underlying theory and main assumptions, as well as the interpretation of results. (2.5 credits) Offered 1998-99 and alternate years.

PIM 233b. Biological and Clinical Foundations of Reproductive Health (Aitken)

Introduces the anatomy and physiology of human reproduction and covers the essential clinical features of common complications of pregnancy, childbirth, and reproductive tract infections. (2.5 credits)

PIM 234c. Maternal and Perinatal Health Care in Developing Countries (Aitken)

Covers the biology and epidemiology of maternal and perinatal health problems in developing countries. Teaches students to evaluate the absolute and relative importance of causes of obstetric morbidity and mortality and of low birthweight, and to evaluate the effectiveness of prevention strategies. (2.5 credits) Not offered 1998-99.

PIM 238d. Infectious Reproductive Morbidity and Infertility (Aitken)

Provides an overview of the global epidemiologic patterns, causal mechanisms, and biologic consequences of reproductive tract infections, including an evaluation of diagnostic methods. (2.5 credits)

PIH 240d. Political Economy of International Health Policy (Reich)

Examines issues of health and development in the context of international politics and economics. Explores ways in which relations between developed and developing countries affect the formulation and implementation of health policy. (2.5 credits)

PIH 241c. Health Planning in Developing Countries: Cost-Effective Analysis and Priority-Setting Techniques (Murray)

Teaches applied skills needed for the economic evaluation of health projects, interventions, and programs. Emphasizes cost effectiveness and its use in sectoral resource allocation decisions, including ethical underpinnings. (2.5 credits)

PIH 244b. Health Sector Reform: A Worldwide Perspective (Berman, Nanda Kumar)

Surveys health and health sector policies in developing countries and current methods for their analysis and reform. Introduces analytical tools for policy

analysis related to financing, benefit packages, politics, health care organization, and consumer and household behavior. (2.5 credits)

PIH 245ab. Population and Development Policies: A World of Contention (Zeidenstein)

Covers the development and implementation of population policies within the broader context of international development activities. Topics include the United Nations, ethical considerations, environment, security, gender and sexuality, reproductive health and family planning programs, shifting US positions, resources, and implementation (2.5 credits)

PIH 246cd, 247cd. Doctoral Seminar in International Health Policy and Economics (Reich, Berman, Murray, Yip, Hsiao, Nanda Kumar)

Explores important international health policy and economics research topics. Emphasizes theoretical frameworks, analytical techniques, empirical applications, and technical results. (1.25 credits each semester)

PIH 248d. Data and Analysis Needs for Health Policy Formulation (Nanda Kumar)

Uses data to train students on a set of tools and analysis techniques to develop policy options for health sector reform. Students develop health sector reform options papers. (2.5 credits)

PII 250b. Epidemiology of Infectious Diseases of Public Health Importance in Developing Countries (Cash)

Reviews the epidemiology of infectious diseases of public health importance in developing countries. Emphasizes epidemiologic patterns of bacterial and viral diseases as they relate to different geographic and socioeconomic environments. (3 credits)

PIH 251d. Evaluating the Impact of Health Interventions in Developing Countries (Hill)

Introduces the principles and practice of evaluating the mortality and morbidity outcomes of health interventions in developing countries. Includes topics in data collection, health impact measurements, and design of impact evaluations. (2.5 credits)

PIH 253b. Human Ecology (Levins)

Provides a broad overview of the human ecosystem as it emerges out of, but differs from, prehuman ecology. Topics are selected from biosphere processes, population interaction, agricultural systems, adaptation evolution and ecology of disease, ecological politics, and evolution. (2.5 credits)

PIH 254d. Tuberculosis: Epidemiology and Control (Murray)

Covers the basic epidemiology of tuberculosis measurement, including the impact of HIV on tuberculosis epidemiology; passive and active diagnostic strategies; the role of chemoprophylaxis; chemotherapy supervision; and case studies of successful control programs. (2.5 credits)

PIH 257d. New and Resurgent Disease (Levins, Awerbuch)

Covers new and resurgent disease as a general problem of evolutionary ecology and social change. Topics include disease and changes in the environment or population. (1.25 credits)

PIH 258b. The Frontiers of Knowledge in HIV/AIDS Prevention, Care, and Research (Tarantola, Reich)

Provides an update on the current state of knowledge about HIV/AIDS epidemiology, prevention, care, and research. Covers the scientific, technical, programmatic, and policy aspects of the response to HIV/AIDS in the US and elsewhere. (2.5 credits)

PIH 259d. Measuring the Global, Regional, and National Burden of Disease (Murray)

Presents the technical basis for disability-adjusted life years and the methods needed to design and implement a national burden of disease study. Focuses on methods of measuring mortality and disability, and on deriving estimates of disease burden in both data-rich and data-poor environments. Provides instruction and experience in measuring burden of disease, emphasizing both conceptual and applied skills. (2.5 credits)

PIH 261cd. Mathematical Models in Biology and Public Health (Levins, Awerbuch)

Examines mathematical models as a basis for analyzing biological and social phenomena relevant to public health. Topics include the spread and maintenance of infectious diseases, and diffusion bioassays for determining toxicity and mutagenicity of drugs. (2.5 credits)

PIH 263e. Grant Writing for Funding of Research and Health Care Projects (Dumbaugh, Cash)

Provides participants with the opportunity to prepare a grant proposal for submission to a funding agency, a framework for writing proposals for research or other projects, and information about organizations that fund such work. (1 credit)

Independent Study

Individual students or small groups of students who wish to go beyond the content of regularly scheduled courses may arrange with individual faculty members to participate in departmental research, undertake specialized readings, or carry out independent studies.

SUMMER PROGRAMS AND CONTINUING PROFESSIONAL EDUCATION

Summer Session for Public Health Studies

Session s: July 1-24, 1998

Session t: July 27-August 14, 1998

Director: Roberta Gianfortoni, MA, Director for Professional Training, Office for Professional Education

The Harvard Summer Session for Public Health Studies introduces students to the core areas of public health in two intensive sessions. It helps them develop the ability to define, assess, and evaluate the health needs of populations, to participate in the development of health policy, and to assure the delivery of health services.

Students in the Summer Session attend one or two sessions in July and August. The 1998 curriculum includes courses in biostatistics, epidemiology, health care management, health policy, ethics, and environmental health. Each course offers 2.5 credits, and the maximum recommended course load is 5 credits (two courses) per session. Because the course work is very intensive and fast-paced, students registered for two courses in a session should not have other work commitments.

The Summer Session is intended for health professionals in training or those who are considering a midcareer change into public health and feel the need to strengthen their skills. Participants include public health professionals, primary care practitioners, physicians engaged in the evaluation of health care delivery and management, physicians in training (including preventive medicine residents and medical students in an MD/MPH joint degree program), and candidates for a part-time MPH program. Students accepted for admission to an HSPH degree program may choose to begin their studies early by enrolling in the Summer Session; these students will then have greater flexibility in course selection during the academic year. Other students may subsequently seek admission to an HSPH degree program.

Tuition for the Summer Session is \$550 per credit.

Summer Program in Clinical Effectiveness

July 1-August 14, 1998

Co-directors: E. Francis Cook, SD, Professor of Epidemiology; Arnold M. Epstein, MD, Professor of Health Policy and Management; and Anthony Komaroff, MD, Professor of Medicine, Harvard Medical School

The Program in Clinical Effectiveness is affiliated with Brigham and Women's Hospital, Massachusetts General Hospital, and Harvard Medical School, and is intended for physicians who have completed their residencies and wish to obtain the quantitative and analytical skills needed for careers in clinical research. Candidates must be fellows or faculty members, who are usually sponsored by their clinical departments or divisions.

Students in this program attend an intensive seven-week, 15-credit summer program, comprising courses in biostatistics, epidemiology, and health policy and management. Upon completion of the summer program, qualified

participants who apply and are admitted to a degree program may apply these academic credits toward the requirements for either a Master of Public Health (MPH) or Master of Science (SM) degree. Two degree programs specifically designed for students in this field are the MPH with a concentration in Clinical Effectiveness (see page 9) and the SM in Epidemiology with a focus on Clinical Epidemiology (see page 38).

Qualified participants unable to attend class during the regular academic year may fulfill requirements for the SM in Epidemiology degree program by attending classes during a second or a third summer period and by completing a supervised research project.

English for Professional Communication

August 17-28, 1998

The teaching style of American classrooms is highly interactive and requires proficiency in spoken English. Students are expected to ask questions in class and to respond quickly in classroom discussions.

A two-week course for non-native English-speaking students entering HSPH is offered for six hours each day for two weeks. Students practice their English language skills by listening to and discussing material with public health content. The course focuses on understanding rapidly spoken English, giving brief presentations, responding to questions, and offering a point of view in discussions. This course is strongly recommended for students who have not had previous experience in a US classroom. The program is also valuable for all students who wish to strengthen their spoken English and to gain experience participating in small-group discussions.

The tuition for the English for Professional Communication Program is \$750.

Advance Seminar Program

September 1-11, 1998

The Advance Seminar Program presents an opportunity for new international students and Master of Public Health (MPH) students to orient themselves to HSPH and to Boston. It provides a brief, intensive introduction to the academic aspects of study at the school, including beginning and intermediate computing, exercises in the discussion method of classroom learning, and a review of mathematical and writing skills.

Program participants learn about classroom protocol, expectations of teacher and student, and student life at the school. They have the chance to become familiar with, and settled in, the Boston area, and to become acquainted with fellow students in workshops and social gatherings.

The program is particularly valuable for those students who have not attended US colleges or universities and for those who have not recently been students. All international students are strongly advised to attend; US students entering the MPH program are welcome and encouraged to attend.

Center for Continuing Professional Education

Director: David A. Shore, MPA, PhD, Assistant Dean for Continuing Professional Education and Coopers & Lybrand Director of the Center for Continuing Professional Education

Organizations and technology evolve so rapidly that health professionals must continually gain new skills and perspectives. The Center for Continuing Professional Education (CCPE) creates programs to address the issues facing health professionals. Grounded in the Harvard tradition of innovative research and practice, these programs benefit participants wishing to assume and advance in positions of leadership in all fields of public health. Through a variety of formats and forums, including teleconferences and courses customized for and located at various organizations, CCPE provides learning opportunities that keep pace with and anticipate the needs of public health practitioners.

For more information about the Summer Session for Public Health Studies, please contact Hildi Keary, Administrative Assistant for Summer Programs, Registrar's and Admissions Offices, 677 Huntington Avenue, Boston, MA 02115.

Phone: 617-432-1052

Fax: 617-432-2009

E-mail: hkeary@sph.harvard.edu

Continuing Professional Education Courses 1998-99

1998

Aug. 10-14	Occupational and Environmental Radiation Protection
Aug. 17-21	Certified Safety Professional Review
Aug. 18-21	Nuclear Emergency Planning
Aug. 24-28	In-Place Filter Testing Workshop
Aug. 24-28	Comprehensive Industrial Hygiene Review
Aug. 25-27	Basic CAMEO/Windows Training
Aug. 25-28	Atmospheric Science and Radioactivity Releases
Sept. 14-17	Industrial Ergonomics: Human Factors in Occupational Health and Safety
Sept. 23-25	Assessment and Control of Occupational Hazards in Waste Site Remediation
Sept. 28-30	Ergonomic Guidelines for Computer Use
Oct. 4-16	Leadership Development for Physicians in Academic Health Centers
Oct. 5-7	Fifth Harvard Conference on Strategic Alliances in Health Care
Oct. 19-20	Spirometry Testing in the Workplace
Oct. 20-23	Analyzing Risk: Science, Assessment, and Management
Oct. 26-30	Fundamentals of Industrial Hygiene
Nov. 1-6	Leadership in Evolving Health Care Systems
Nov. 16-18	Leadership and Management Skills Essential for Health and Safety Professionals
Nov. 19-20	Risk Management and Liability Issues in Occupational Safety and Health
Fall date TBA	Negotiation and Conflict Resolution

1999

Jan. 17-29	Program for Chiefs of Clinical Services
Feb. 25-26	Spirometry Testing in the Workplace
March 2-5	Analyzing Risk: Science, Assessment, and Management
March 8-10	Certification Review for Occupational Health Nurses
March 15-19	Comprehensive Industrial Hygiene Review
March 22-26	Fundamentals of Industrial Hygiene
March 22-26	Occupational and Environmental Radiation Protection
March 29-30	Occupational Health Physical Assessment Skills for Nurses
April 6-9	Benefit-Cost Analysis for Environmental, Health, and Safety Regulation
April 12-16	Certified Safety Professional (CSP) Review
April 26-30	Guidelines for Laboratory Design: Health and Safety Considerations
May 3-7	Managing Ambulatory Health Care for Physicians in Community Health Centers
May 10-12	Orientation to Indoor Air Quality
May 13	Hands-On Measurement and Diagnostics: Evaluating the Indoor Environment
May 18-21	Radioactivity in the Environment: Risk, Assessment, and Measurement
May 24-27	Atmospheric Science and Risk Projections for Hazardous and Radioactive Materials Releases
May 25-26	Spirometry Testing in the Workplace
June 7-11	Management and Disposal of Radioactive Waste
June 8-11	Cost-Effectiveness Analysis for Medical Technologies and Pharmaceuticals
June 14-18	Testing and Certification of Biological Safety Cabinets
June 15-18	Measurement, Design, and Analysis for Health Outcomes Research
Spring date TBA	Advanced Program in Health Care Negotiation and Conflict Resolution

For a brochure and a complete list of continuing professional education courses, please contact the Center for Continuing Professional Education, 677 Huntington Avenue, Boston, MA 02115.
Phone: 617-432-1171
Fax: 617-432-1969
E-mail: contedu@sph.harvard.edu

Harvard faculty members lead the programs in cooperation with other experts who have earned international reputations for excellence in their fields. Participants benefit from a wide and diverse body of knowledge. Through the exchange of insights and ideas between participants and instructors, programs encourage and create a dynamic learning environment. Many sessions use the Harvard case study method of instruction to facilitate fast-paced, interactive problem solving, while others include hands-on laboratory sessions and demonstrations with field equipment.

To increase the value to participants, programs offer continuing medical education credit and other forms of continuing professional education credit in areas of industrial hygiene and health care licensing and credentialing. Each participant receives a certificate of attendance.

A partial list of continuing professional education courses offered during the 1998-99 academic year appears above. Dates are subject to change.

APPLYING TO THE SCHOOL: ADMISSIONS, FINANCIAL AID, AND HOUSING

Admission to Degree Programs

The admissions information in this section pertains to applications for degree programs offered by the Harvard School of Public Health. These are the Master of Public Health (MPH), Master of Occupational Health (MOH), Master of Science (SM), Doctor of Public Health (DPH), and Doctor of Science (SD) degrees.

The PhD programs described in this *Register* are offered under the auspices of the Graduate School of Arts and Sciences (GSAS). Please note that GSAS application forms and procedures are different from those used by applicants to programs administered by HSPH. The GSAS application deadlines are December 15, 1998, for programs in the natural sciences and December 30, 1998, for all other programs. For information about admission to the Biological Sciences in Public Health Program, please contact the Admissions Office, Division of Medical Sciences, Harvard Medical School, 260 Longwood Avenue, Boston, MA 02115 (phone: 617-432-0162). For information about admission to the PhD Program in Health Policy, please contact Joan P. Curhan, Director, 79 John F. Kennedy Street, Cambridge, MA 02138 (phone: 617-496-5412). (See page 11 for further information about PhD programs in the biological sciences and page 53 for information about the PhD in health policy.)

Application Deadline Applications for all HSPH doctoral (SD and DPH) and Master of Science (SM) programs must be complete by January 4, 1999.

All complete applications for the MPH and MOH programs that are received on or before January 4, 1999, will be considered in a priority admission cycle. The deadline for completing applications to MPH and MOH programs for review in a second cycle is February 26, 1999. It is to the candidate's advantage to meet the priority deadline, as these degree programs may fill to capacity during the prior-

ity MPH admission cycle. Applications that arrive after February 26, 1999, and those that remain incomplete as of that date, will not be considered for admission for the 1999-2000 academic year.

Clinical Effectiveness and Summer Institute affiliates matriculating in the 1999 summer program who wish to apply for degree candidacy are strongly encouraged to meet application deadlines outlined above. At the time this *Register* went to press, there were provisions for summer program participants to apply for admission to degree programs in the fall, immediately after completing their summer program, with a deadline of September 2, 1999. The Committee on Admissions and Degrees is considering eliminating this admissions cycle. However, interested applicants should contact the Admissions Office for more information.

Application Procedures and Requirements

Only complete applications will be processed and reviewed for admission. For an application to be considered complete, the Admissions Office must receive, by the deadline indicated above, the following application materials:

It is the policy of HSPH to make admission decisions on the basis of an individual's qualifications for the program to which he or she has applied. In decisions about admission and financial aid, HSPH does not discriminate against individuals on the basis of race, color, sex, sexual orientation, religion, age, national or ethnic origin, political beliefs, veteran status, or disability.

Please refer to the instruction booklet that accompanies the application forms for detailed procedures and requirements. Prospective degree candidates or special students who wish to request application materials, who have questions about admission requirements, who require assistance with the application process, or who wish to visit the school should contact the HSPH Admissions Office, 677 Huntington Avenue, Boston, MA 02115.

Phone: 617-432-1031

Fax: 617-432-2009

E-mail: admisofc@sph.harvard.edu

- A completed and signed **application form**, a self-addressed, stamped **notification postcard**, and a 500-word essay written by the applicant. This essay should describe the applicant's academic and professional history, area of interest at HSPH, reasons for wanting to enroll in the degree program, and professional or academic career plans upon completion of the program.
- **Official transcripts** from all colleges, graduate schools, and/or professional schools attended, whether or not the courses taken appear to be relevant to a degree in public health. Transcripts should list courses taken, grades received, and degree(s) conferred (if applicable). Each transcript must be received by the Admissions Office in an envelope sealed and signed by the registrar of the school issuing the transcript. Applicants are expected to have a distinguished undergraduate record, as well as excellent performance in any graduate work undertaken.
- **Letters of recommendation** from at least three people who are well acquainted with the applicant's academic work and/or professional experience. (Recommendation forms are provided in the application packet.)
- **Official scores of the Graduate Record Examination (GRE).** Because applications will not be considered without test score reports, applicants should take the GRE no later than November. Although applicants are recommended to submit GRE scores, the following substitutions are permitted in the specified circumstances: physicians and currently enrolled medical students may submit Medical College Admission Test (MCAT) scores; dentists and dental students may submit Dental Admissions Test (DAT) scores; lawyers and law school students may submit Law School Admission Test (LSAT) scores; and those who hold or who are earning an MBA or DBA from an accredited institution may submit Graduate Management Admission Test (GMAT) scores. Applicants who propose to substitute one of these tests for the GRE must contact the Admissions Office for a determination of appropriateness of substitu-

tion. The requirement for scores from a standardized test will not be waived on the basis of academic or professional background.

- **Official scores of the Test of English as a Foreign Language (TOEFL),** if applicable. Applicants (including those who have been US citizens or US permanent residents for less than one year) from countries where English is not the language of instruction must submit a score from the TOEFL. Applicants are advised to take the TOEFL no later than November; those who have already taken the TOEFL may submit the score as long as it is not more than two years old. While a minimum score of 560 is required for admission to a degree program, preference is given to doctoral applicants with scores closer to 600, due to the demanding nature of the program. In rare circumstances, an applicant may be admitted to special student status with a TOEFL score of 557 to 559. Subsequent admission to degree candidacy, if desired, is contingent upon the applicant's re-taking the TOEFL and receiving a minimum score of 560. Some students may be required to complete an English course before attending courses at HSPH.
- A non-refundable **application fee** of US \$60 in the form of a check drawn on a bank in the United States, a postal money order, or an international money order payable to the Harvard School of Public Health.

An applicant may apply to only one degree program (MPH, MOH, SM, SD, or DPH). An applicant who wishes to apply for a joint degree in two departments should submit a petition requesting consideration by both departments. Requirements for admission to both departments must be satisfied. Applicants to degree programs must apply for either full-time or part-time status; international students applying for an F1 visa are eligible for full-time study only. Admission is granted for the fall semester of a particular year (currently September, 1999). Students who are unable to enroll at that time may request a deferral and may be required to reapply. Applicants who require an early decision should adhere to the application deadlines for the year before the one in which they wish to enroll (for example,

Tuition and Fees, July 1998-June 1999

Tuition for full-time master's degree students and special students

(20-credit minimum and 22.5-credit maximum per semester, fall and spring.)

\$21,895 per year

Tuition for part-time master's degree students, special students, and affiliates

(1-19 credits per semester, fall and spring, with a maximum of 15 summer credits. Part-time students may take 45 credits per year for the comparable full-time tuition rate.)

\$ 550 per credit

Tuition for full-time resident doctoral students

(20-credit minimum and 22.5-credit maximum per semester, fall and spring.)

Full-time, year 1	\$21,895 per year
Full-time, year 2	\$21,895 per year
Full-time reduced, year 3	\$10,948 per year
Facilities fee, year 4 to thesis defense	\$ 2,736 per year
Thesis defense fee (final semester before graduation)	\$ 1,170 one semester

Tuition for part-time resident doctoral students

Credits 1-80	\$ 550 per credit
Credits 81-120	\$ 275 per credit
Credits 121 to thesis defense	\$ 73 per credit
Thesis defense fee (final semester before graduation)	\$ 1,170 one semester

Tuition for nonresident doctoral students, full-time or part-time \$ 1,466 per year

Tuition for summer session 1998 \$ 550 per credit

Fees

Registration fee (summer, fall, spring)	\$ 125 per semester
Late registration fee	\$ 80 per week
Late add/drop/change fee	\$ 80 per petition
Leave of absence fee	\$ 293 per semester
Health fees (see page 88)	\$ 343 per semester

Note: Tuition rates are given in 1998-99 tuition dollars. Continuing students should expect an increase.

they may apply during the winter of 1998-99 for admission in September, 2000).

Application Review Applicants are notified in writing of their application status soon after the application is received. If the application is incomplete, the applicant is informed of the items still outstanding. Applications to MPH and MOH programs that become complete after January 4 will be held for review in a

second group. The applicant is notified in writing as soon as a decision is made. The decision of the Committee on Admissions and Degrees is final and is not subject to appeal.

Tuition Deposit and Financial Certification Applicants who are granted admission must submit a \$500 tuition deposit when confirming acceptance of the offer of admission. This deposit is nonrefundable and will be applied toward the student's tuition and fees.

Housing

The Henry Lee Shattuck International House is operated by the school on a nonprofit basis for its full-time students and their families from the United States and abroad. Located within walking distance of the school, Shattuck International House has 72 apartments in a range of sizes to accommodate single students, roommates, and families. Each apartment is furnished and has its own kitchenette and bath. Shared facilities include a laundry room, study/function room, computer room, TV room (equipped with VCR), library, music room (with piano), exercise room (with cross country ski simulator, exercise bicycle, and ping-pong table), children's playroom, and outside recreation area (with barbecue grill, basketball hoop, volleyball court, swing set, and slide). The four-story building is not equipped with an elevator.

Apartment assignments are made to eligible applicants in accordance with the following guidelines: 1) New HSPH students are given priority; 2) seventy percent of the available apartments are reserved for international students, and thirty percent are rented to US and Canadian students, with priority given to those living the greatest distance from Boston; 3) within these categories, applications are considered on a first-come, first-served basis. A waiting list will be maintained throughout the summer and fall for applicants who are not assigned an apartment during the initial process.

Demand for the apartments exceeds their availability. It is to the applicant's advantage to submit a housing application as early as possible, and applicants to the school may submit a housing application before they receive notification of admission. Apartments are assigned after applicants are admitted and have confirmed their intention to enroll. If an applicant's admission application is rejected, the application for housing will be withdrawn.

International students are permitted to live in Shattuck International House for a maximum of three years; US and Canadian students may stay for a maximum of two years, assuming they continue to be full-time students. A partial year of residency counts as an entire year.

Applicants visiting HSPH may meet with Carol LaFleur, Student Services Coordinator, to discuss housing options or may wish to consult the apartment listings located in the Office for Students. Printed information about seeking and renting apartments in Boston is available upon request.

For information about housing and to request application forms for Shattuck International House, please return the postcard inside the back cover of this Register, or contact Carol LaFleur, Student Services Coordinator, HSPH Office for Students, 677 Huntington Avenue, Boston, MA 02115.

Phone: 617-432-1034

Fax: 617-432-2009

E-mail: manthony@sph.harvard.edu

Health Fees, September 1998-August 1999

University Health Services (UHS) Fee

	Semester	Year
Individual	\$ 343	\$ 686
Family (student plus spouse)	686	1,372
Family (student plus spouse and one child)	876	1,752

The University Health Services (UHS) provide comprehensive prepaid medical care such as physical examinations, physician visits, laboratory tests, psychological counseling, and emergency services. The UHS fee is compulsory for all degree candidates and special students registered for 10 or more credits in a semester. Others may elect to waive UHS coverage; this must be done before the first day of fall registration.

Blue Cross/Blue Shield (BC/BS) Medical Insurance

Individual	\$ 280	\$ 560
Family (student plus spouse)	832	1,663
Family (student plus spouse and one child)	1,251	2,501

The Blue Cross/Blue Shield (BC/BS) plan provides extensive benefits for ambulatory and inpatient care not offered at UHS. BC/BS coverage is compulsory for all nonimmigrant international students and for all other students who do not have comparable insurance. International students whose spouse and/or children will also be living in the US are required to enroll in the family plan. US students who have comparable insurance may elect to waive BC/BS coverage; this must be done before the first day of fall registration.

Note: UHS and BC/BS coverage extends from September 1 through August 31. For more information, please contact the Student Insurance Office, Harvard University Health Services, 75 Mt. Auburn Street, Cambridge, MA 02138 (phone: 617-495-2008; fax: 617-496-6125).

Accepted applicants who are not US citizens or permanent residents must demonstrate that sufficient funds are available in US currency to pay the costs (tuition, fees, living expenses, and costs associated with the English for Professional Communication Program, if applicable) of the full period of their academic program. A financial certification form is included in the admission packet for this purpose and must be completed before the certificate of eligibility form (I-20 or IAP-66) needed to obtain a visa can be issued. In addition, international students supported by personal funds, family funds, or sponsors' funds which are not paid directly to Harvard University are required to deposit and retain, in a Boston-area bank in an account bearing their name, funds adequate to cover the appropriate tuition, fees, and living expenses for the degree

program. An official letter stating the amount held in US dollars must be sent directly by the bank to the Admissions Office for each account before the immigration forms can be completed. Students bringing their families to the US must transfer and certify adequate funds for their support as well. (Please see page 90 for an estimate of living expenses in the Boston area.)

Admission to Nondegree Status

Affiliates Harvard faculty and staff, employees of Harvard-affiliated hospitals, HSPH alumni, and certain other Boston-area public health professionals may register for a maximum of 10 credits per semester as nondegree affiliates of the school. Affiliates must register

in person at the HSPH Registrar's Office. Please call the Registrar's Office at 617-432-1032 to learn the exact dates for affiliate registration.

Enrollment of affiliate students in specific courses is subject to the availability of space and the permission of the instructor and the registrar; if classes fill to capacity, preference is given to HSPH degree candidates. Payment is on a per-credit basis and is due at the time of registration. Payment is not refundable unless the student is unable to take the desired course because it is filled to capacity. Affiliate students may not cross-register into other Harvard schools or MIT, nor may they audit courses.

Special Students Individuals who do not fall into one of the categories listed above may apply for special student status. Applicants for special student status are subject to the same admission and registration requirements and procedures as are applicants for degree candidacy. US citizens and permanent residents may apply to the Admissions Office for full-time or part-time special student status. Foreign applicants are eligible for full-time status only. Admission to special student status is limited to one academic year. The deadline for applying for special student status is January 4, 1999.

Subsequent Application for Degree Candidacy Affiliates and special students who wish to be admitted to degree candidacy must apply and will be considered on the same basis as other applicants for admission. Applicants to degree programs who have taken courses at the school within the preceding three years may, at the time of their application, petition to count up to 20 credits retroactively as part of the academic credit requirements. Permission may be granted if the courses fit into the applicant's academic degree program. (Applicants who have taken HSPH courses within the past three years while enrolled at another Harvard school or at MIT may petition to count up to 20 credits toward their HSPH degree only if the courses taken did not count toward another degree. The applicant must submit, at the time of his or her application, an official transcript from the other

school, as well as a letter from that school's registrar stating that the courses taken at HSPH have not been counted toward another degree.) Up to 20 credits of tuition payment may be counted toward the school's tuition requirement.

Financial Aid

The table on page 90 provides estimates of the cost of spending a year at HSPH and should be used as a guide in planning finances. While academic departments and the Financial Aid Office make every effort to help students find ways to finance their education at HSPH, the school does not offer need-based grants, and resources for student financial aid are extremely limited. Applicants are urged to investigate all potential sources of support, including employers, government agencies, and civic and religious organizations.

Limited financial aid is available in the form of grants, loans, and work programs, as follows:

Grants Some departments have training grants that provide funds up to full tuition plus stipend. Eligibility for training grants is generally based on career goals, academic merit, experience, and US citizenship or permanent residency. Other grants also may be available, eligibility for which varies according to departmental goals and priorities. All incoming students are considered for these funds, and no separate application need be submitted.

Federal Student Loans The Financial Aid Office administers several federal Title IV student loan programs. US citizens and permanent residents may be eligible to borrow up to \$18,500 of Federal Direct Student Loans if they meet the registration status requirements, submit the required financial documentation, have no prior federal student aid loans in default, and do not owe refunds on other federal student aid. Perkins Loans of up to \$5,000 may be available to a limited number of students demonstrating extreme financial need.

Work Programs Some full-time students obtain part-time employment as research or teaching assistants in their academic depart-

Please refer to the instruction booklet that accompanies the financial aid application forms for additional information about loan and work programs. Applicants with questions should contact the HSPH Financial Aid Office, 677 Huntington Avenue, Boston, MA 02115.

ments. The school also participates in the Federal Work-Study Program, which covers up to 60% of the earnings of US citizens and permanent residents.

To be considered for federal loans, work-study, and need-based grants, students must submit the following documents to the Financial Aid Office:

- **Completed and processed Free Application for Federal Student Aid (FAFSA) for 1999-2000.** The toll-free number to request the FAFSA is 1-800-433-3243; the toll-free number for the hearing impaired is 1-800-730-8913. Allow 4-6 weeks processing time. The FAFSA cannot be submitted before January 1, 1999.
- **The Student Aid Report (SAR)** should be submitted after the candidate receives the report from the federal processor.
- **Completed HSPH Request for Federal Assistance Form for 1999-2000.** This form should be submitted to the Financial Aid Office by February 12, 1999.
- **Signed copy of the applicant's 1998 Federal Income Tax Return**, with schedules, or a Non-Filer Statement, and the corresponding W-2 form(s).

- **Financial aid transcripts** from each institution previously attended, regardless of whether the candidate received aid.

- For permanent residents, a copy of the front and back of the **Alien Registration Card**.

- For US citizen and permanent resident males born after January 1, 1962, who are not registered with Selective Service, a **statement from Selective Service** indicating that they did not willfully fail to register. This statement can be obtained by writing to the Selective Service System, Office of the General Counsel, Washington, DC 20435.

- The Financial Aid Office may request other items upon review of the initial application.

Staff in the Financial Aid Office review completed financial aid applications as soon as they have been notified by the Admissions Office that the applicant has been admitted to the school and they have confirmed any departmental grant offers. An aid letter is then sent to the applicant.

Students must disclose to the Financial Aid Office, in writing, any outside funding award(s).

ENROLLMENT AND STUDENT SERVICES

Registration

Prior to registration, students receive complete course descriptions and information about course meeting times and registration procedures. Every resident degree candidate is expected to register in person on the dates specified. The fall registration dates for 1998 are May 4–8 for currently enrolled students returning to the same degree program in the fall; September 1 for participants in the Advance Seminar Program; September 8 for other new students; and September 9 for returning students not cleared through the May preregistration process. A student who is unable to register at the designated time should write to the Registrar's Office to request late registration and will be assessed a late registration fee of \$80 per week. Students who intend to cross-register for courses in other Harvard schools or at MIT should be aware that registration deadlines and academic calendars vary from school to school and that they must conform to the registration requirements of the school into which they are cross-registering as well as those of HSPH.

In order to register, students must show that they have met any contingencies stated in their letter of admission, that they have complied with the Massachusetts state regulation concerning immunization against measles, mumps, and rubella, and, for international students, that they have presented their passports and entry permits to the Harvard International Office. Students must take appropriate action to pay their semester term bill by the due date of the bill on which the charges appear. Information about each of these prerequisites is sent to incoming students prior to their arrival at the school.

Degree candidates are subject to certain course load and tuition requirements. All degree candidates (with the exception of students on leave of absence) are expected to be registered each semester. To be considered full-time, students must take 40 to 45 credits during the nine-month academic year (September

to May), with a minimum of 20 credits per semester. Students enrolled in fewer than 20 credits in a semester are considered part-time.

Degree candidates are required to pay full-time or equivalent tuition for a designated number of credits, depending on the length of their program (for example, a student in the MPH program must pay tuition for a minimum of 40 credits in order to receive the degree.) Doctoral students who earned an HSPH master's degree within three years of beginning the doctoral program are credited with tuition paid during their master's program. The *Student Handbook*, distributed at registration, provides detailed information about course load and tuition requirements for degree programs.

Incoming full-time degree candidates and special students receive a bill for fall semester tuition and fees in July and on a monthly basis thereafter. (Students matriculating as degree candidates during the summer receive a bill that includes both summer and fall tuition.) Spring semester tuition and fees are charged to the

Each spring, the Student Coordinating Committee hosts International Night, an evening offering ethnic feasts and student performances. The food and entertainment reflects the diversity of cultures found among the students. Here, Sonia Hernandez-Diaz, a doctoral student in the Department of Epidemiology, and Rafi Mohedano, spouse of an HSPH student, dance the flamenco.

For information about registration and billing procedures, please contact the HSPH Registrar's Office, 677 Huntington Avenue, Boston, MA 02115.

Phone: 617-432-1032

Fax: 617-432-2009

E-mail: manthony@sph.harvard.edu

student's bill in December. Part-time tuition is assessed in July for fall semester and in December for spring semester at 10 credits. Part-time students wishing to register for fewer than 10 credits should inform the Registrar's office prior to registration so the bill can be reduced accordingly. Students wishing to complete more than 10 (and fewer than 20) credits should inform the Registrar's Office prior to registration so the 10-credit registration cap can be lifted and the bill can be adjusted accordingly. In the case that the Registrar's Office is not notified of a part-time student's registration intentions, payment of 10 credits will be required prior to registration and the student will be limited to 10 credits until the Registrar's office is notified otherwise.

To be eligible for Federal Student Loans, part-time students must register for 10 or more credits. To be eligible to waive the University Health Service Fee, students must register for fewer than 10 credits.

Other charges that may appear on the term bill include course materials charges, library fines, any charges not covered by the Univer-

sity Health Services fee (for example, some dental and optical shop charges), and rental charges from Harvard Real Estate. Students who are sponsored by a non-Harvard funding agency (for example, the World Health Organization or the US military) must provide an original award letter from the sponsoring agency outlining the US dollar amount awarded, the terms of payment for each year the student will be funded, and the duration of the sponsorship. While the sponsor is billed directly at mid-semester, all charges and credits appear on the student's monthly term bill. Sponsored-billing forms are available from the Registrar's Office.

Harvard faculty and staff, Harvard alumni, affiliates (except those in summer programs), and Boston-area public health professionals enrolled in nondegree status do not receive a term bill, but must pay all tuition

and fees in full when they register. Payment is not refundable if the student elects to drop the course(s) for which he or she has registered.

Student Support Services

The Office for Students provides support services and offers educational, social, and cultural programs that enhance the academic experience, facilitate student development, encourage interaction among students, and help students to cope with the many demands of their academic and personal lives. Responsibilities of the Office for Students include maintaining liaison with the student government and other student groups, and addressing particular needs and concerns of students, both individually and through special programming. The provision of career services, administration of the school's residential facilities, and assistance to students with disabilities are encompassed within the Office for Students.

Student Organizations

The Student Coordinating Committee (SCC) includes elected representatives from each department, from the Master of Public Health program, and from the Division of Biological Sciences. The SCC meets regularly to discuss issues and plan activities related to student life at HSPH and provides a mechanism for working with members of the school's faculty and administration on school-wide issues, for sponsoring seminars and other educational programs, for organizing social activities, and for arranging for student representation on several of the school's faculty committees. The SCC frequently sponsors or cosponsors collaborative activities with the school and the neighboring community, including tutoring programs, toy drives, and an annual dinner-dance for senior citizens.

Other student organizations include the Health and Human Rights Committee, Ñ-The Spanish Speaking Committee, Minority Student Health Organization, Asian Club, Women in Public Health, and the Lesbian, Gay, Bisexual, and Transgender Alliance.

Minority Students

The increased participation of under-represented groups in public health practice and research is essential to the advancement of health, and the school is committed to expanding the diversity of its faculty, staff, and student body. Members of US minority groups are urged to identify themselves for special recruitment efforts.

The HSPH Minority Student Health Organization (MSHO) plays a leading role in presenting programs on public health issues concerning underserved populations. During the 1997-98 academic year, MSHO sponsored a series of films, lectures, and cultural activities during Black History Month and hosted workshops for students and community activists addressing minority health concerns. The Spanish Speaking Committee takes up issues of importance to that constituency. The Asian Club promotes both cultural activities at HSPH and Asian student involvement in the community.

The Third World Caucus (TWC) brings together minority students from throughout Harvard's Longwood campus, which includes the medical, dental, and public health schools. TWC comprises several organizations, including the Black Health Organization, Medical Students of Las Americas, Meeting of Students Addressing Intercultural Concerns (MOSAIC), Native American Health Organization, Student National Medical Association, and Student National Dental Association.

International Students

During the 1997-98 academic year, approximately 25 percent of HSPH students came from outside the United States, representing 47 countries. The experience international students bring to the school lends an important dimension to the academic program and adds to the diversity of the student population. International students organize many cultural events at the school, such as celebrations of the lunar New Year, and participate in the annual International Night talent show.

The Office for Students assists foreign students in adjusting to life in the United States. The office sponsors ESL classes, hosts the Global Chat (a weekly lunchtime meeting that gives students an opportunity to practice their English while learning about each other's native country), and organizes social events and local excursions. Staff in the Office for Students are available to meet with students to discuss personal or academic problems and to assist students and their families who have questions about living in Boston and the United States.

The Harvard International Office, located on the Cambridge campus, provides a variety of services to students from abroad, including orientations, newsletters, and cross-cultural workshops. One program, the Friends of International Students, matches students with a person or family who will welcome them and ease their transition to the US. Foreign student advisors from the Harvard International Office holds weekly office hours at HSPH to assist students with visa matters and to advise them on immigration regulations.

For information about services provided by the Office for Students or about student organizations and activities, please contact Bernita L. Anderson, Assistant Dean for Students, 677 Huntington Avenue, Boston, MA 02115.

Child Care Facilities

There are a number of child care facilities available to students on the Longwood and Cambridge campuses. Arrangements should be made as early as possible, as facilities are quickly filled. For further information about these centers and other child care options in the area, please contact the Office of the Child Care Advisor at 617-495-2851. The Medical Center Office for Parenting at 617-432-1615 can also provide information on support services, resources, and programs.

Career Services

The Career Services Office provides career counseling, employment resources, networking activities, and teaches professional development skills to assist students and alumni/ae in expanding their employment prospects. The office sponsors workshops on job-seeking strategies, interviewing skills, and resume and cover-letter writing, and panel discussions fea-

turing public health professionals speaking about market trends and career paths. In the Career Resource Center, students have access to listings of current job openings, information about fellowships and internships, and resource directories. The office also maintains a website, which provides links to additional career and employment resources. The office coordinates the on-line posting of student resumes, maintains a data bank of alumni career advisors, and publishes a directory of fellowships and career resources in international health, a monthly job opportunities bulletin, and a *Career Services Guide*.

Alumni Association

The Alumni Association of the Harvard School of Public Health enjoys an active membership of over 6,000 graduates worldwide. The association is governed by an elected council of twelve members who meet four times each year. Regional gatherings of alumni are often organized in the United States and abroad by members of the association with assistance from the HSPH Office of Alumni Relations. Members of the association are also active in raising funds for student scholarships and travel grants.

The following is a list of HSPH alumni who are available to answer questions that potential applicants may have about departments, curricula, possible career opportunities, and alumni activities. They may also be able to suggest other alumni whose academic and/or career interests more closely match an applicant's or who live in the applicant's immediate area.

referred to the Regional Director, Office for Civil Rights, US Department of Education, J.W. McCormack POCH, Room 222, Post Office Square, Boston, MA 02109.

Disabilities

The university, in accordance with its obligations under the Americans with Disabilities Act and Section 504 of the Rehabilitation Act of 1973, does not discriminate against qualified individuals with disabilities in admission or access to programs and activities. Carol LaFleur, HSPH disability coordinator, assists all students with learning, manual, mobility, hearing, visual, and other disabilities. Testing is available at University Health Services for students who suspect they may have a learning disability. Also available for support is Louise Russell, director, University Student Disability Resource Center, 20 Garden Street, Cambridge, MA 02138 (phone: 617-496-8707).

Days

After 151c, Section 2B, of the General Laws of the Commonwealth of Massachusetts, any student in an educational training institution, other than a denominational training institution, because of his or her religious beliefs or to participate in any religious observance, or work requirement on a parol, may be excused from any such examination or test which he or she may have taken or of such absence on any particular date at such makeup examination or test. No fee or create an unreasonable burden upon the student. Fees of any kind shall be charged by the institution for making such opportunity available, and no adverse or prejudicial effect shall be to any student for availing himself of the provisions.

Security

With the Student Right-to-Know and Freedom of Information Act of 1990, the Harvard University Department publishes an annual security report titled *Playing It Safe*. The booklet describes security policies, provides statistics on the occurrence of crime on campus, and lists some of the counseling programs available.

You may obtain a copy of *Playing It Safe* from the HSPH Admissions Office, 677 Huntington Avenue, Boston, MA 02115 (phone: 617-432-1031).

Voter Registration

Massachusetts state law, as set forth in Chapter 51, Section 42E (Section 17 of Chapter 475 of the Acts of 1993), requires educational institutions to make available affidavits of voter registration. Eligible students may register to vote at registration, and mail-in registration affidavits are available from the Registrar's Office. Students from other states who desire to vote in a state other than Massachusetts may use the federal mail-in affidavit of voter registration or a mail-in form supplied by the state. These students must contact the appropriate state election official to receive the state form or may contact the Massachusetts Elections Division, Room 1705, McCormack Building, One Ashburton Place, Boston, MA 02108, for a federal form.

Administrative Officers of the Harvard School of Public Health

Neil L. Rudenstine, PhD, President of Harvard University

James H. Ware, PhD, Acting Dean of the Faculty of Public Health (Through December, 1998)

Barry R. Bloom, PhD, Dean of the Faculty of Public Health (Beginning January, 1999)

Richard J. Cannon, MBA, Dean for Administration

John H. Lichten, MSW, Associate Dean for Finance

Ann R. Oliver, EdM, MPH, Associate Dean for Academic Affairs

Deborah B. Prothrow-Stith, MD, Associate Dean for Faculty Development

Paul S. Riccardi, MEd, Associate Dean for Operations

Jay A. Winsten, PhD, Associate Dean for Public and Community Affairs

Bernita L. Anderson, MA, Assistant Dean for Students

Maria Anthony, MBA, Registrar and Assistant Dean for Admissions and Financial Aid

Carolyn Everette, Assistant Dean for Human Resources

David A. Shore, PhD, Assistant Dean for Continuing Professional Education

Harvard University On-Line Course Catalogs

Course information from all of Harvard's faculties is available on-line. The on-line course catalogs contain course descriptions, faculty information, and general information about taking classes at Harvard University.

The HSPH course catalog may be accessed via the World Wide Web at <http://www.hsph.harvard.edu/>. Information about other Harvard faculties can be found at <http://www.harvard.edu/>.

The Harvard School of Public Health is accredited by the Council on Education for Public Health.

Harvard School of Public Health
677 Huntington Avenue
Boston, MA 02115

ATTN: Carol LaFleur

Volume 20, Number 9 September 5, 1998

Every effort is made to ensure the information contained in this *Official Register* is accurate at the time of publication. However, the Harvard School of Public Health reserves the right to make changes without notice in tuition and fees, admission and degree requirements, courses of instruction, and other information contained herein. These changes will govern all students, including students who matriculated prior to the changes coming into effect.

Nondiscrimination Policy

As a matter of policy, law, and commitment, the Harvard School of Public Health does not discriminate against any person on the basis of race, color, sex, sexual orientation, religion, age, national or ethnic origin, political beliefs, veteran status, or handicap in admission to, access to, treatment in, or employment in its programs and activities. The following person has been designated to handle inquiries about nondiscrimination programs: Carolyn Everette, Assistant Dean for Human Resources, 677 Huntington Avenue, Boston, MA 02115 (phone: 617-432-1046). Inquiries about the application of nondiscrimination policies concerning race, color, national origin, age, sex, or handicap may also be referred to the Regional Director, Office for Civil Rights, US Department of Education, J.W. McCormack POCH, Room 222, Post Office Square, Boston, MA 02109.

Disabilities

The university, in accordance with its obligations under the Americans with Disabilities Act and Section 504 of the Rehabilitation Act of 1973, does not discriminate against qualified individuals with disabilities in admission or access to programs and activities. Carol LaFleur, HSPH disability coordinator, assists all students with learning, manual, mobility, hearing, visual, and other disabilities. Testing is available at University Health Services for students who suspect they may have a learning disability. Also available for support is Louise Russell, director, University Student Disability Resource Center, 20 Garden Street, Cambridge, MA 02138 (phone: 617-496-8707).

Religious Holidays

According to Chapter 151c, Section 2B, of the General Laws of Massachusetts, any student in an educational or vocational training institution, other than a religious or denominational training institution, who is unable, because of his or her religious beliefs, to attend classes or to participate in any examination, study, or work requirement on a particular day shall be excused from any such examination or requirement which he or she may have missed because of such absence on any particular day, provided that such makeup examination or work shall not create an unreasonable burden upon the school. No fees of any kind shall be charged by the institution for making such opportunity available to the student, and no adverse or prejudicial effects shall result to any student for availing himself or herself of these provisions.

Campus Security

In compliance with the Student Right-to-Know and Campus Security Act of 1990, the Harvard University Police Department publishes an annual security booklet entitled *Playing It Safe*. The booklet describes Harvard's security policies, provides statistical information on the occurrence of crime on campus, and outlines some of the counseling programs the university offers. You may obtain a copy of *Playing It Safe* from the HSPH Admissions Office, 677 Huntington Avenue, Boston, MA 02115 (phone: 617-432-1031).

Voter Registration

Massachusetts state law, as set forth in Chapter 51, Section 42E (Section 17 of Chapter 475 of the Acts of 1993), requires educational institutions to make available affidavits of voter registration. Eligible students may register to vote at registration, and mail-in registration affidavits are available from the Registrar's Office. Students from other states who desire to vote in a state other than Massachusetts may use the federal mail-in affidavit of voter registration or a mail-in form supplied by the state. These students must contact the appropriate state election official to receive the state form or may contact the Massachusetts Elections Division, Room 1705, McCormack Building, One Ashburton Place, Boston, MA 02108, for a federal form.

Administrative Officers of the Harvard School of Public Health
